PREFACE

In the framework of improving sources and methods for the compilation of the Balance of Payment (BOP) and the National Accounts (NA), the National Institute of Statistics of Rwanda (NISR) in partnership with the Directorate General of Immigration and Emigration (DGIE), the National Bank of Rwanda (NBR) and the Rwanda Development Board (RDB) conduct the bi-annual Travel Expenditure Survey (TES). This survey is conducted twice a year from October to January and from May to July. The survey captures expenditures of non-residents visiting Rwanda (inbound) and expenditures of Rwandan residents abroad (outbound). This survey is conducted following concepts and recommendations of Manual on Statistics of International Trade in Services 2010 (MSITS 2010) and Balance of Payments and International Investment Position Manual 6th Edition (BPM6). The methodology is replacing the settlements data collected in the International Transactions Reporting System (ITRS) formerly known as foreign exchange record systems.

The current methodology to estimate travel services, consist of using survey results (average daily expenditure and length of stay) multiplied by the number of Rwandan resident travellers abroad and non-resident visitors to Rwanda, provided by the DGIE. This report presents the travel estimates for the period that runs from January to September 2023.

NISR would like to acknowledge the effort and commitment made by the TES technical Staff and enumerators to fulfil this task.

MURANGWA Yustin
Director General

EXECUTIVE SUMMARY

Travel services cover expenditures on goods and services acquired by travellers during their visits to an economy other than their country of residence. Two flows in particular are therefore considered for the compilation of exports and imports of travel services for the Balance of Payments:

1. Non-resident visitors to Rwanda (exports / travel credit)
2. Rwandan residents travelling abroad (imports / travel debit)

This publication presents the estimates of travel services for the first three quarters of the year 2023, the survey methodology and the results. Travel services comprise of expenditure of non-residents in Rwanda (Credit) and expenditure of Rwandan residents abroad (Debit).

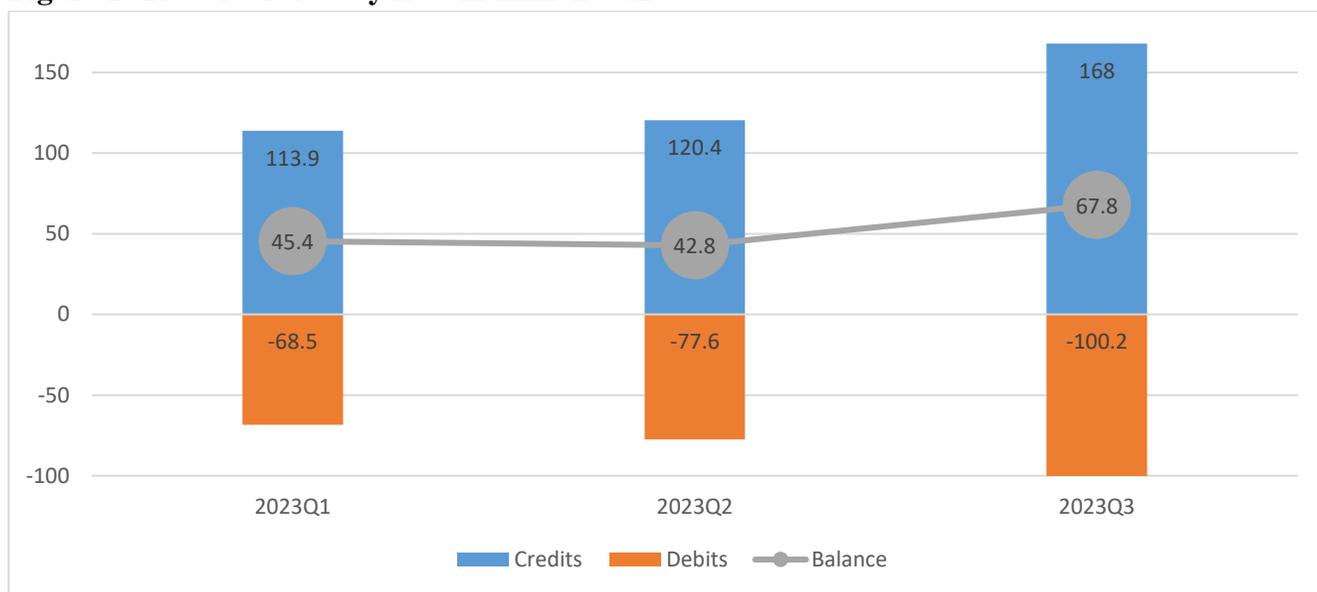

This report is made of four chapters as follows; Chapter 1 covers the methodology for estimating travel expenditure, Chapter 2 shows survey results for the second and third quarters of 2023, Chapter 3 presents official figures of arrivals and departures of Rwanda and Chapter 4 presents grossed up results of total travel expenditure (credits and debits) disaggregated by modes of travel, travel purposes and country groupings.

KEY FINDINGS

Total credits are expenditures of non-residents visitors to Rwanda and total debits are expenditures of Rwandan residents while abroad. Total credits and debits are estimated using inputs from survey multiplied by the number of non-resident visitors to Rwanda and Rwandan resident travellers abroad, respectively. The following are the key survey results:

- The total travel credit equalled 113.9 million USD in the first quarter of 2023, 120.4 million USD and 168.0 million USD in the second and third quarters of 2023, respectively.
- The total travel debit amounted to 68.5 million USD in the first quarter of 2023, 77.6 million USD and 100.2 million USD in the second and third quarters of 2023, respectively.
- As result, the travel service surplus reached 45.3 million USD in the first quarter of 2023, 42.7 million USD and 67.8 million USD in the second and third quarters of 2023, respectively
- Figure 1 displays the quarterly series and the balance.

CHAPTER 1. METHODOLOGY

1.1. Introduction

In the framework of improving sources and methods for the compilation of the Balance of Payment (BOP) and the National Accounts (NA), the National Institute of Statistics of Rwanda (NISR) in partnership with the Directorate General of Immigration and Emigration (DGIE), the National Bank of Rwanda (NBR) and the Rwanda Development Board (RDB) conduct the bi-annual Travel Expenditure Survey (TES).

This survey is conducted twice a year from October to January and from May to July. The survey captures expenditures of non-residents visiting Rwanda (inbound) and expenditures of Rwandan residents abroad (outbound). This survey is conducted following concepts and recommendations of Manual on Statistics of International Trade in Services 2010 (MSITS 2010) and Balance of Payments and International Investment Position Manual 6th Edition (BPM6). The methodology is replacing the settlements data collected in the International Transactions Reporting System (ITRS) formerly known as foreign exchange record systems.

Travel is a key component of trade in services within the BOP and the NA. The aim of this chapter is to present the methodology used to collect data of the travel expenditure survey in Rwanda.

1.2. Methodology for TES

Travel covers expenditures on goods and services acquired by travellers during their visits to an economy other than their country of residence. Expenses of non-resident visitors to Rwanda are recorded as exports of travel services, while expenditures abroad by Rwandan resident travellers are recorded as imports of travel services.

The survey based approach for measuring travel expenditures is based on the following standard model depicted in Figure 2.

The approach requires two main sources of information:

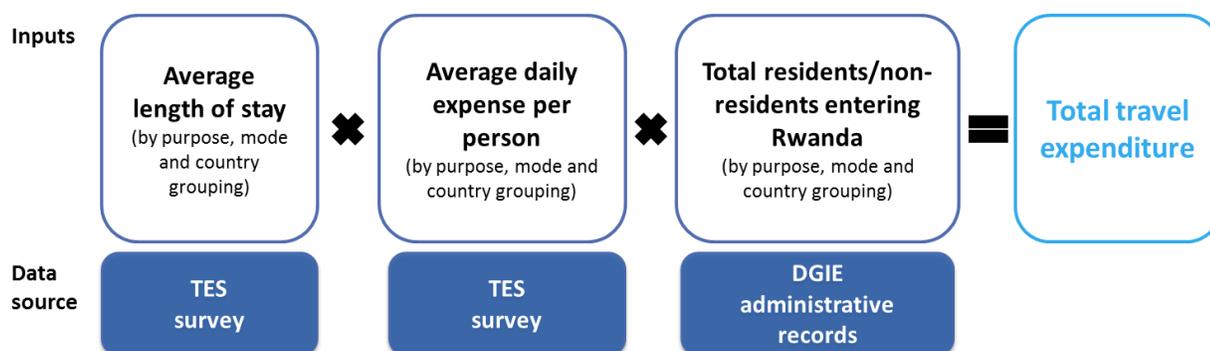

- (1) The TES to produce the average daily expenditure per person and the average length of stay for both non-resident and resident travellers.
- (2) DGIE records of total travellers for land and air borders, by nationality.

The counts of total arrivals (entry data) to Rwanda are used as a grossing factor to estimate total travel expenditure. These data are provided with a breakdown by country grouping based on nationality and purpose of travel, while for estimating travel, the residence and visited regions are required to apply proportions of residence and visited regions for each purpose of travel from the survey.

The following additional treatment are also made:

- i. Combined Business, Conference and Official Mission purposes into a single group under the name of Business;
- ii. Combined Holiday and Relaxation categories into a single Holiday category;

Figure 2. Estimation of travel expenditure

Input data is broken down by purpose of visit, mode of travel and country grouping (Figure 2)

- **Purpose of visit** is the main reason that motivated the travel, for example, whether business or holiday though the traveller may have also visited friends or relatives, or vice versa.
- **Mode of travel** refers to border point type (airport or land border).
- **Country grouping** refers to country of residence for the non-resident traveller and main country visited for the resident traveller. There are five regions groupings, namely Asia, East African Community/EAC, Europe, Rest of Africa, North America and Rest of the world. In DGIE data, country of residence and country visited by resident travellers were not available. Therefore, to estimate travel expenditures by geographical breakdown, we used the proportions of the TES country groupings. *The total travel expenditure is obtained by multiplying the average length of stay with average daily expenditure per person broken down by purpose, mode and country grouping with DGIE data.* Appendix provides additional definitions for key terms and concepts used in this report.

1.3. Sample selection

The methodology for selecting travellers followed a two-stage process. In the first stage, the selection of borders was purposive, chosen based on DGIE border flows data¹. In total, 11 borders were selected namely Kigali International Airport, Rusumo, Kagitumba, Gatuna, Cyanika, Rusizi I, Rusizi II, Akanyaru Haut, Nemba, Corniche and Poids Lourds. In the second stage, travellers at each border were screened based on their residence.

1.4. Sampling procedure

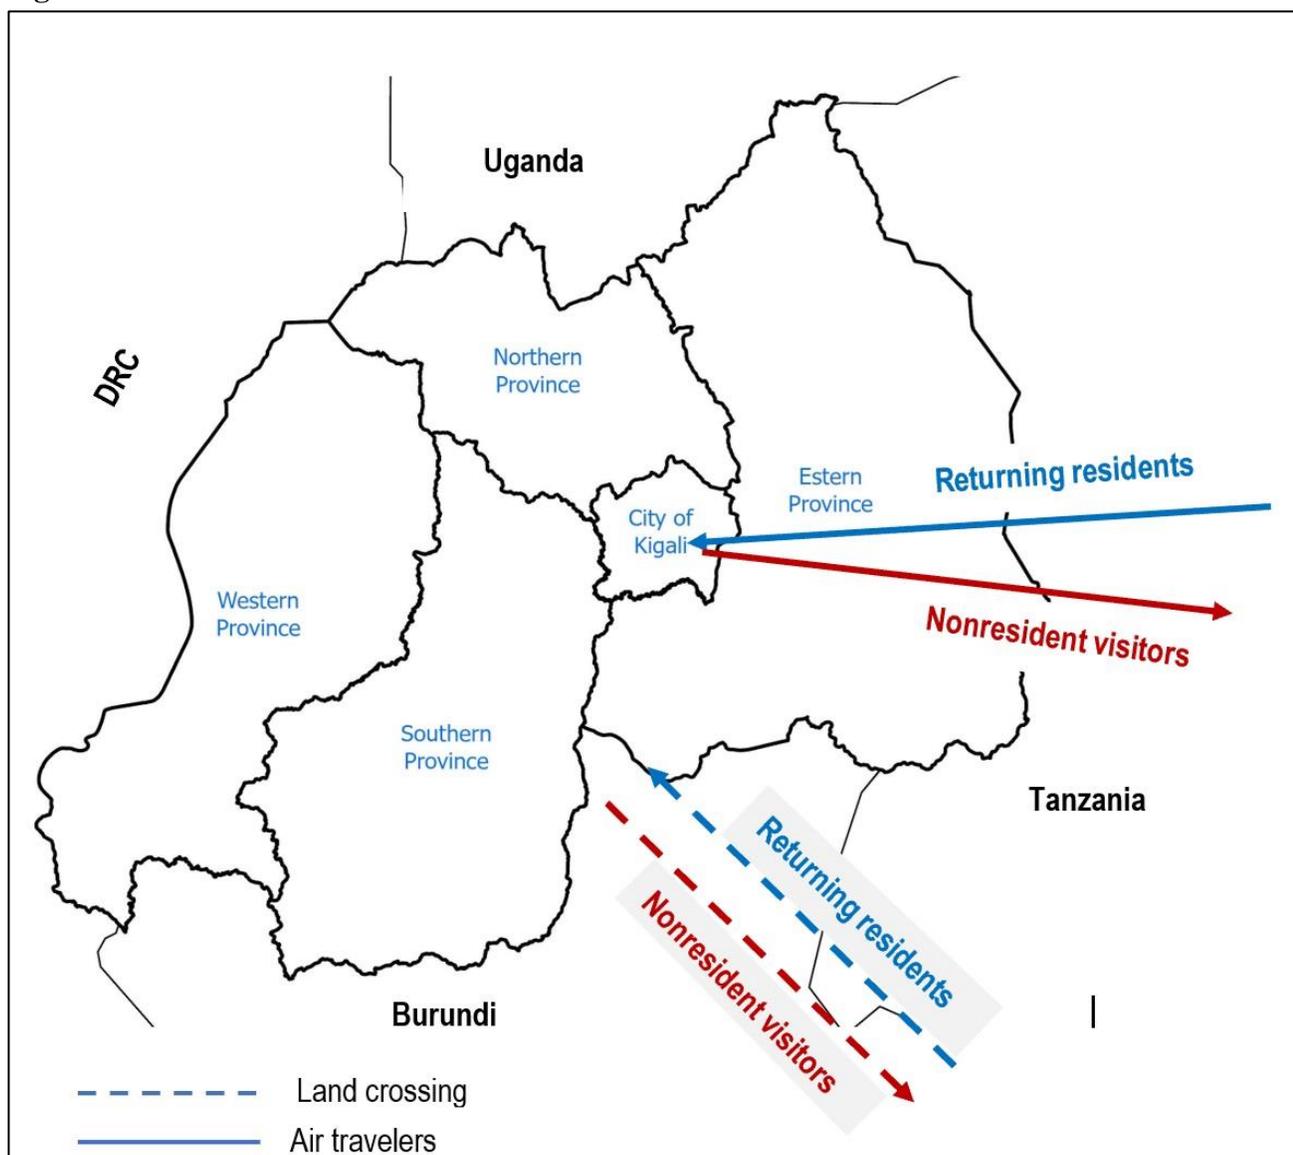

The screening of passengers was done to ensure only targeted travellers were interviewed: non-resident visitors to Rwanda exiting the country (travel credit) and Rwandan residents who travelled abroad entering Rwanda (travel debit).

Data collection takes place at the end of the trip, when travellers have a complete picture of what has been spent on goods and services acquired on their visit. For *non-residents*, data collection takes place

¹ The selection of borders was done based on DGIE data by selecting those borders with high volume of travellers.

at the exit point when they are leaving Rwanda. For *residents*, this is at the entry point when residents are returning from their trip abroad.

Figure 3. Flows and when data are collected

Source: NISR, 2023

TES enumerators conducted as many interviews as possible to eligible travellers. The interviews were administered face-to-face on a voluntary basis using CAPI.

1.5. Number of respondents

Table 1 summarises the total number of respondents of the survey², broken down by mode of travel (air or land) and whether a resident (R) or non-resident (NR) survey was conducted. In addition, the table provides information on months of data collection and borderposts selected for data collection.

² Sample sizes shown are sample sizes used for analysis, following data cleaning and exclusions of questionnaires not

Table 1. June to August 2023 TES respondents by mode of travel and residence

- Kigali International Airport (KIA) - With Burundi: ▪ Akanyaru Haut and Nemba - With DRC: ▪ Poids Lourds ³ , Corniche ⁴ , Rusizi I and Rusizi II - With Tanzania: ▪ Rusumo - With Uganda: ▪ Cyanika, Gatuna and Kagitumba	Residents	Mode of travel	June-August 2023
		Air	4,136
Land	23,573		
Total	27,709		
	Non-Residents	Air	4,076
		Land	15,047
		Total	19,123

Source: TES 2023- NISR

1.6. Survey instruments

For all surveys, four separate survey instruments were used to collect information: non-resident visitors via air, non-resident visitors via land, and returning Rwandan residents via air and land to accommodate questions specific to air and land transport.

The resulting survey forms cover the following groups of travellers:

- 1) **Non-resident visitors** – via Kigali International Airport (KIA)
- 2) **Non-resident visitors** – via land border crossings
- 3) **Rwandan Residents** – via KIA
- 4) **Rwandan Residents** – via land border crossings

The basic structure of all survey instruments is the same. All travel expenditure survey forms collected specific information from travellers following the MSITS 2010 international recommendations, namely their nationality, country of residence, main purpose of travel, length of stay, and patterns of expenditure including number of persons included in the expenditure reported and type (accommodation, food and beverage, sightseeing, etc.).

In addition to these questions, the questionnaires administered to returning residents collected data on the country visited where they spent most time in. Similarly, the questionnaires administered to non-residents visitors to Rwanda collected information about the country of residence of visitors and information for tourism statistics purposes about activities done in Rwanda, places of stay during their visit to Rwanda and basic demographic data.

Finally, the non-resident instrument via KIA, included questions about prepaid expenses for their trip to Rwanda.

A series of key concepts and definitions used in the TES is included in Appendix A.

complying with the objectives of the survey. More information on this issue is detailed on Appendix B.

³ Poids Lourds is commonly referred to as ‘Petite Barrière’ although volume of travellers in this border is greater than at La Corniche.

⁴ La Corniche border post is commonly referred to as ‘Grande Barrière’

CHAPTER 2. RESULTS FROM THE TRAVEL EXPENDITURE SURVEY

The objective of this Chapter is to present the main results from June to August 2023 Travel Expenditure Survey. The results under consideration are mainly *average daily expenditure per person* and *average length of stay*, both inputs used in the methodology for estimating travel credit and debit (See Chapter 1).

2.1. Export of travel services

This section highlights the average length of stay and average daily expenditure per person of nonresident visitors to Rwanda.

2.1.1. Average length of stay

Tables 4 and 5 show the average length of stay by purpose of visit and mode of travel for air and land, respectively.

- Air travellers

Table 2 displays the average length of stay of non-resident travellers to Rwanda by air broken down by country groupings and travel purposes.

Table 2. Average length of stay of non-resident visitors to Rwanda, Air

CHAPTER 3. ARRIVAL AND DEPARTURE MIGRATION FLOWS

3.1. Introduction

The Directorate General of Immigration and Emigration (DGIE), under its mandate of managing borders, records all movements of travellers entering or leaving Rwanda. These data are processed, analysed and used for grossing up survey results.

3.2. Data used for estimating travel debit and credit

This sub-section presents the derived data and tables to be used for estimating total travel credits and debits in Chapter 4.

3.2.1. Non-resident visitors to Rwanda

The total number of travellers to Rwanda is based on total arrivals and is shown in Table 13 (Air) for 2023Q2, Table 14 (Air) for 2023Q3, Table 14 (Land) for 2023Q2 and Table 15 (Land) for 2023Q3. These tables present data which are disaggregated by purpose of travel and residents' country grouping.

3.2.1.1. Air travellers

The total number of non-resident travellers to Rwanda by air during the second and third quarters of 2023 is 64,465 and 89,511, respectively (Tables 10 and 11).

Table 10. Non-residents visitors to Rwanda by Air⁵ for 2023Q2

Country grouping	Business	Education	Health	Holiday	VFR	Transit	Total
Asia	2,751	18	4	1,010	1,711	344	5,838
EAC	4,373	237	37	1,274	6,930	3,101	15,952

Total	19,466	951	90	15,070	21,016	7,872	64,465

Source: DGIE

⁵Air transits encompass travellers in transit who have exited the airport, it is assumed that all transit travellers make some expenditure in Rwanda, such as on taxi services, food, souvenirs, and more. It is important to highlight that land transits are subject to a distinct treatment.

Table 11. Non-residents visitors to Rwanda by Air for 2023Q3

Rest of the world	192	5	38	419	479	346	1,479
Total	71,567	2,342	2,315	13,689	131,222	313,184	534,319

Source: DGIE

⁶ For estimating total land credits in Chapter 5, land transits are considered except for DRC residents who transit between borders without spending any money in Rwanda except few of them. However, after analysing migration raw data, only 20 per cent of Congolese transiting though spend money in Rwanda.

3.2.2. Rwandan Residents

- Air travellers

Tables 14 and 15 show the total number of returning Rwandan residents from abroad via air for second and third quarters of 2023. The total number of Rwandan residents travelling by air is 36,269 and 47,311 for second and third quarters of 2023, respectively.

- Land Travellers

Tables 16 and 17 display the total number of resident travellers returning from abroad by land. The total number of returning Rwandan residents by land was 220,749 and 269,390 for second and third quarters of 2023, respectively.

Table 16: Rwandan Resident travellers by land for 2023Q2

Country grouping	Business	Education	Health	Holiday	VFR	Total
EAC	154,948	1,564	500	25,325	35,233	217,569
Rest of Africa	249	3	-	260	157	669

CHAPTER 4. TRAVEL CREDITS AND DEBITS

This Chapter presents the estimates of total travel expenditure for the first three quarters of the year 2023.

4.1. Travel credit, debit and balance

- Overall

Figure 1 presents estimates of total travel expenditure for the first three quarters of the year 2023 by flow while Table 18 and Table 19 contain the findings by the purpose of travel for credit and debit respectively.

Table 18: Total travel credit by the purpose of travel in USD million

Purpose	2023Q1	2023Q2	2023Q3
Business	25	43.8	55.4
Education	16.9	9.7	17.8
Health	0.4	0.7	1.3

APPENDIXES

APPENDIX A: Key concepts and definitions in TES

- 1. Number of visits and flow:** The **number of visits** relate to the number of **completed visits** (i.e. the data collected relate to the number of visits, not the number of visitors), counted upon arrival as Rwandan residents return from their stay abroad and upon exit as non-residents leave Rwanda. This is to ensure interviews take place at the end of the traveller's visit when factual information on expenditure and duration is available. Consequently, the travel expenditure survey does not include Rwandan residents departing from Rwanda neither non-residents visitors arriving in Rwanda.
- 2. Length of stay:** In the case of Rwandan residents, length of stay covers the time spent outside Rwanda; this is the number of nights Rwandan residents spent abroad. For non-residents, length of stay covers the time spent in Rwanda; it refers to the number of nights spent within Rwanda.
- 3. Non-residents visitors:** A **non-resident visitor** is a person who is a permanent resident in another country other than Rwanda. Includes foreigners who live abroad and Rwandan passport holders (or nationals) who have been living and/or working abroad (diaspora).⁷ Country of residence is therefore **used to derive country grouping in the non-resident samples**.
- 4. Rwandan residents:** Rwandan resident is a person who is a permanent resident⁸ of Rwanda. Includes Rwandan citizens and foreign passport holders who live in Rwanda. Rwandan nationals abroad travelling for special purposes such as education, health, diplomatic mission, military operations/ missions are considered Rwandan residents.
- 5. Country visited:** A country visited by a traveller that is different from his resident country. When a resident of Rwanda has visited more than one country, the entire visit, expenditure and stay is allocated to the country **where the resident spent most time of his/her travel**. Although information is collected at the country level, estimates in this report are shown aggregated at the regional level. **Country visited is used to derive country grouping categories in the resident samples**.
- 6. Purpose of travel:** Purpose of travel is the main reason why a person is travelling. The main purposes of travel are Business (including mission and conference), Holiday, Visiting friends and relatives, Education, Health. Transits are also considered as a purpose of travel exclusively for non-residents transiting through Rwanda. **Miscellaneous/other purposes** such as attending sporting or religious events are allocated to one of the five main categories mentioned above.
- 7. Daily average expenditure per person:** It is defined as the sum of all expenses divided by number of nights and number of travellers included in the calculation of the expenses. This is calculated for a specific country grouping and with a specific purpose of travel. Expenditure figures reported

⁷ With the exception of students and patients who are considered as residing in their home country.

⁸ To be considered as permanent resident of a country, any of the following conditions should be met: (1) the person has lived in a country for more than 12 months; or intends to stay in a country for more than 12 months, even if the person has not lived there for that full length; or intends to have permanent home in a country.

on foreign currencies are converted to dollars **using the average foreign exchange rate** of the data collection period. Data in this report is shown in U.S. dollars.

a. **Rwandan resident’s expenditure data:** For Rwandan residents, the survey collected **travel expenditure** of Rwandan residents travelling abroad for six broad categories: accommodation; food and beverages; entertainment; sightseeing excursions, souvenirs and gifts; transportation within the countries travelled to; and other expenses (excluding international transportation costs for air travellers). These include amounts paid for the trip by other Rwandan residents (such as an employer) and any amount spent for the trip prior to the departure, excluding the cost of international flights.

b. **Non-resident expenditure data:** For non-resident visitors, the survey collected **travel expenditure** of non-residents visitors in Rwanda for six broad categories: accommodation; food and beverages; entertainment; sightseeing excursions, souvenirs and gifts; transportation within the countries travelled to; and other expenses (excluding international transportation costs for air travellers). These include amounts paid for the trip by other non- residents (such as an employer), excluding the cost of international flights. In addition, travel expenditure paid before arriving (e.g. such as part of a package or independently arranged) is also collected and combined with additional the expenditures made while being in Rwanda to have the total expenditure.

8. **Average length of stay:** It is defined as the average number of nights spent by a traveller from a specific country grouping and with a specific purpose of travel.

9. **Country groupings (geographical areas):**

- **Asia:** All countries in Asia plus the Middle East countries.
- **EAC⁹:** Rwanda, Kenya, United Republic of Tanzania, Uganda and Burundi.
- **Rest of Africa:** All non-EAC countries, including the Democratic Republic of Congo.
- **Europe:** All European countries.
- **North America:** Includes United States and Canada.
- **Rest of World:** Central and South America, Australia and New Zealand, and other Oceania countries and Pacific Islands.

10. **Current-dollar estimates** are valued in the prices of the period when the transactions occurred, that is, at “market value.” Also referred to as “nominal estimates” or as “current-price estimates.”

11. **Exclusions**

- a. Expenditure on goods for sale since are declared in customs and accounted in merchandise goods.
- b. Expenditure on international transportation, included in international passenger services survey.
- c. Travellers interviewed reporting no expenses.
- d. Travellers interviewed who report stays of more than 90 days (apart from education and health purposes) were excluded from the analysis on this report.

⁹ South Sudan is only included in DGIE official annual figures of 2016.

- e. Day-visits (that is trips that do not involve overnight stay) are included in the survey, but were recoded as 1 night during fieldwork.
- f. Border community travellers' are not included in the survey.

APPENDIX B: Data cleaning procedure

The data cleaning followed comparable approaches in each of the survey rounds. Data cleaning was done in Stata.

1. For checking duplicates, the record ID is used to check for duplicates and identified duplicate records or ID were cleaned accordingly.
2. The CAPI used in data collection contributed to response consistency.
3. Outliers were checked and cleaned accordingly. The following checks is done on:
 - Number of nights
 - International exits via land borders
 - Number of travellers
 - Expenditure per traveller per night, by type of expenditure
4. Once data entry errors were corrected, all expenditure on local transportation for air travellers was reviewed. In the case where observations clearly included cost of international transportation, these results were adjusted to a plausible amount by subtracting the cheapest cost of air fares available over the same period or adjusting the fares based on a cut-off of 2000 USD per person.
5. Interviews that selected ‘other purpose of travel’ were reviewed. Those with a purpose of travel specified were re-assigned to either of the following categories: Holiday, VFR, Business, Health, and Education. The following decision was made:
 - Business included: Assignment, digging, labour force, conference (church mission, evangelism, preach, research, training, visit church/pray), and official missions
 - VFR included: Burial, wedding
 - Holiday included: Sport, leisure, tourism & festival

Exclusions from analysis

6. Cases reporting no expenses in either of the different types of expenditure categories were excluded from analysis.
7. Questionnaires without record of ‘purpose of travel’ were reviewed against hard copies. Where no data was found, it was removed as there was no purpose of travel.
8. Stays of more than 90 days (apart from education and health purposes) were also removed from analysis, as these travellers were considered to be resident of the country being visited.

Winsorization/outlier treatment

9. Winsorization is a technique that replaces extreme data values with less extreme values. We use this technique to further deal with outliers in the data. The procedure we have followed is the following:
 - 9.1. By travel mode (air and land) and for each type of expenditure category (accommodation, food and beverages, entertainment, sightseeing, transportation within country, and other expenses) and by major regions, we create a new variable which transform the original variables into their log.¹⁰
 - 9.2. For each transformed variable (and by air and land separately), we trim values above 3 standard deviations on each tail of the distribution.
 - 9.3. Then for each of these variables, we estimate the value on the second standard deviation (critical value of 1.96 for a 95% confidence interval, 2.5% in each tail) and replace more extreme values with the value estimated at the threshold. We not only do this by air and land but also by the following regions of destination/residence. For land travellers we consider EAC and non-EAC. For air travellers, we consider EAC, Rest of Africa, Europe/America, and Rest of the world.

Once this is done, we take the exponential of each of the variables (to bring the data back to normal) and include the original zeros that were excluded from this technique, which are considered genuine.

As a robustness check, we repeat step 8 for the following thresholds:

- No threshold= no winsorization after trimming
- Critical value of 2.33 for a 99% confidence interval, 1% each tail
- Critical value of 1.645 for a 90% confidence interval, 5% each tail

¹⁰ The distributions of expenses were positively skewed with a couple of outliers at the top and bunching of zero expenses at the bottom. We do this to have a more normal distribution which do not takes into account the zeros at the bottom.

APPENDIX C: Travel disclaimer

1. Annual figures shown in this publication are final estimates but subject to revision in light of additional passenger data obtained. DGIE estimates are revised in line with the DGIE revisions policy.
2. Planned revisions usually arise from either the receipt of revised passenger traffic data or the correction of errors to existing data identified later in the annual processing cycle. Those of significant magnitude will be highlighted and explained.
3. Revisions to published DGIE estimates can be expected in the report of the annual Travel Expenditure Survey.
