

REPUBLIC OF RWANDA

NATIONAL INSTITUTE OF STATISTICS OF RWANDA

EICV3 DISTRICT PROFILE

Gicumbi

Foreword

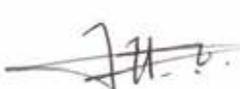

The 2010/11 Integrated Household Living Conditions Survey (EICV3) is the third in the series of surveys which started in 2000/01 and is designed to monitor poverty and living conditions. The survey fieldwork commenced in November 2010 and continued for one full year. In 2010/11, for the first time the achieved sample size of 14,308 households in the EICV3 was sufficient to provide estimates which are reliable at the level of the district.

To date, twelve publications have been issued by the National Institute of Statistics Rwanda (NISR) using EICV3 data:

- A report with an overview of main indicators;
- A poverty profile;
- A series of ten thematic reports, each exploring in depth a theme from the Economic Development and Poverty Reduction Strategy (EDPRS). The ten reports in this series are:

(i) Economic Activity; (ii) Utilities and Amenities (water/sanitation/energy/housing/-transport/Information and Communication Technology (ICT)); (iii) Social Protection; (iv) Environment and Natural Resources; (v) Consumption; (vi) Gender; (vii) Youth; (viii) Education; (ix) Agriculture; and (x) Income.

This district profile is one of 30 further documents issued by the NISR. Based on EICV3 data, each district profile discusses the living conditions in one of the 30 districts of Rwanda.

Yusuf MURANGWA
Director General

Acknowledgements

This report has been prepared with participation of a large number of individuals and organizations. We would like to express our gratitude to all of them.

We would like to express our sincere appreciation to the partner Ministries, Institutions, agencies and development partners for their respective great support and inputs throughout the process of writing and publishing this report.

We also express our profound gratitude to the team of Oxford Policy Management (OPM), and in particular to Mary Strode and her colleagues. Their technical assistance contributed to the success of this report.

We also thank the technical staff from National Institute of Statistics of Rwanda (NISR) for their unfailing participation in all activities of the survey data analysis, which was coordinated by HABIMANA Dominique and his assistants, APPEL Derek and KARANGWA John.

We appreciate the valuable support provided by administrative and financial departments of the NISR. Their interventions allowed this survey data analysis to be carried out smoothly and under good conditions.

1 Introduction

On 7 February 2012, the President of Rwanda officially launched the design phase of the EDPRS2. A key input into the development of the EDPRS2 is the evidence collected through the third Integrated Household Living Conditions Survey (EICV3), fieldwork for which was carried out by the NISR between October 2010 and November 2011. In 2010–11, for the first time the achieved sample size of 14,308 households in the EICV was sufficient to provide estimates which are reliable at the level of the district. This district profile presents the key findings from EICV3 for the district of Gicumbi in the Northern Province.¹

This profile contains key baseline indicators for the district which are structured into eight sections as follows:

1. Demographic characteristics;
2. Poverty indicators;
3. Standards of living, which includes water and sanitation, housing and energy, ownership of selected durables, distance to facilities/services, and use of financial services;
4. Economic activities and income sources;
5. Agriculture, which includes land, farming practices, commercialisation of crop production, and livestock;
6. Education indicators covering schooling and literacy, primary and secondary education, and ICT education;
7. Vulnerable groups, including persons with major disabilities and orphans; and
8. Gender issues, including female heads of household and employment type by sex.

¹ District tables underlying all figures in this report are presented in the Annex.

2 Demographics

The EICV3 survey results show that the total population of Gicumbi district in 2010–2011 was 572,000. This represents 29% of the total population of Northern Province and 5.3% of the total population of Rwanda. Females comprised 52.1% of the population of Gicumbi district. Figure 2.1 below clearly shows that the majority is young with 81% of the population aged under 40 years old.

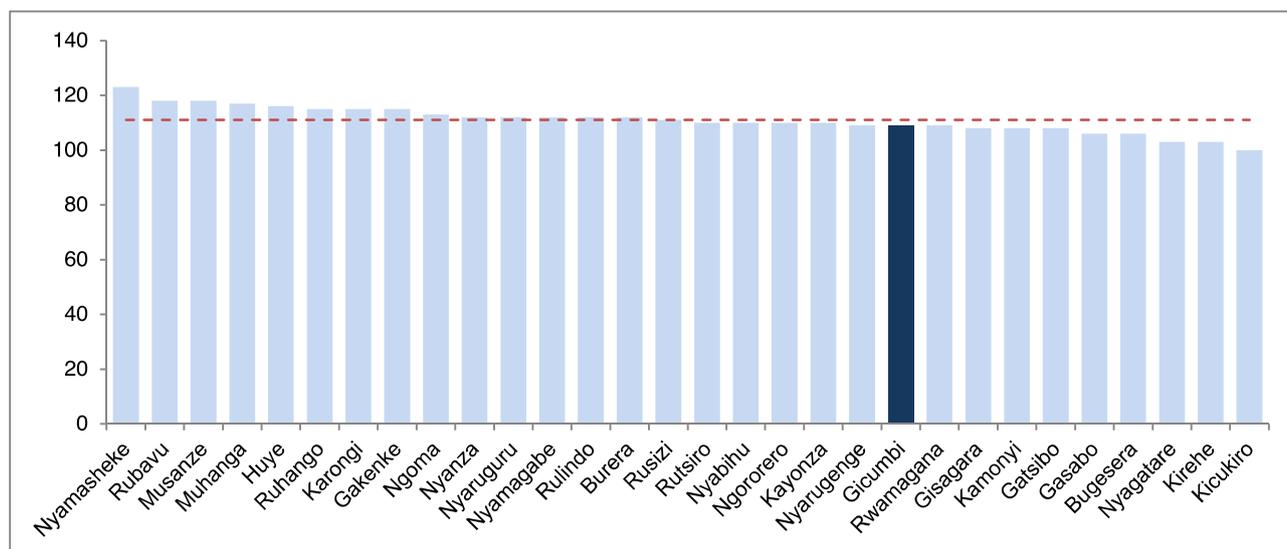

Figure 2.1 Distribution of population in Gicumbi by age groups and sex (000s)

Source: EICV3.

Figure 2.2 shows that Gicumbi district has 109 females per 100 males, which is slightly below the national average of 111 females per 100 males.

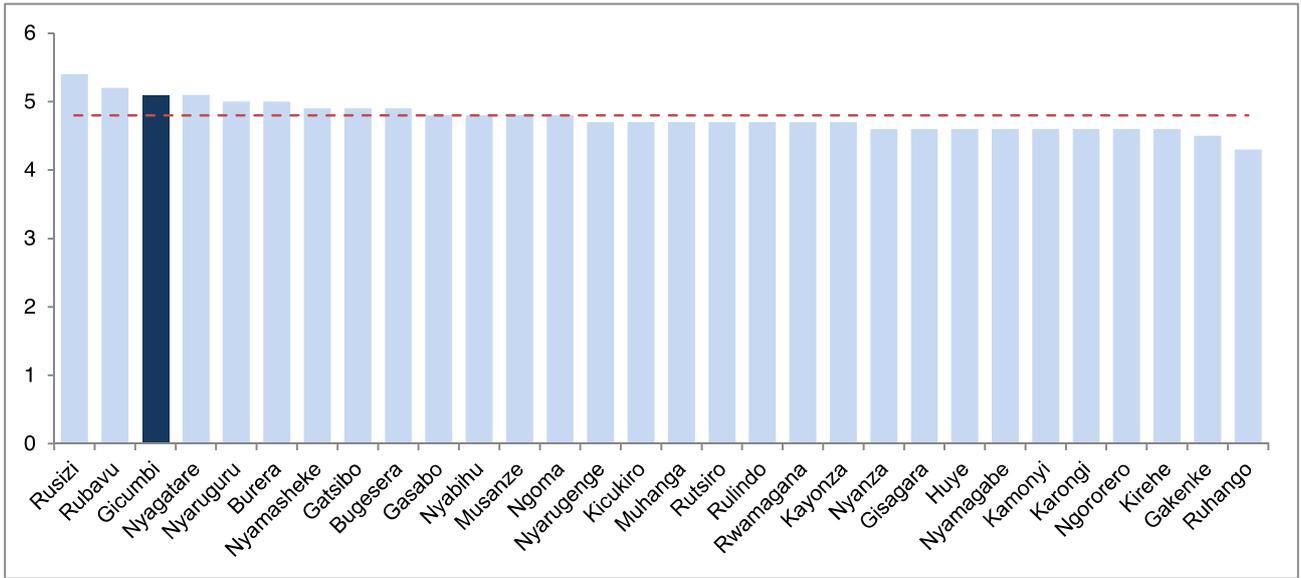

Figure 2.2 Number of females per 100 males, by district

Source: EICV3. Note: Horizontal line represents national average.

As shown in Figure 2.3, the average household size is 5.1 for Gicumbi district, which is above the national average of 4.8. On this indicator, Gicumbi ranks third after Rusizi and Rubavu among all districts and highest among all districts in the Northern Province. The figures for the other districts in the province are 4.5 for Gakenke, 4.7 for Rulindo, 4.8 for Musanze, 5 for Burera and 4.7 for Rulindo. Given that Gicumbi is a rural district, this high mean household size is to be expected.

Figure 2.3 Mean household size, by district

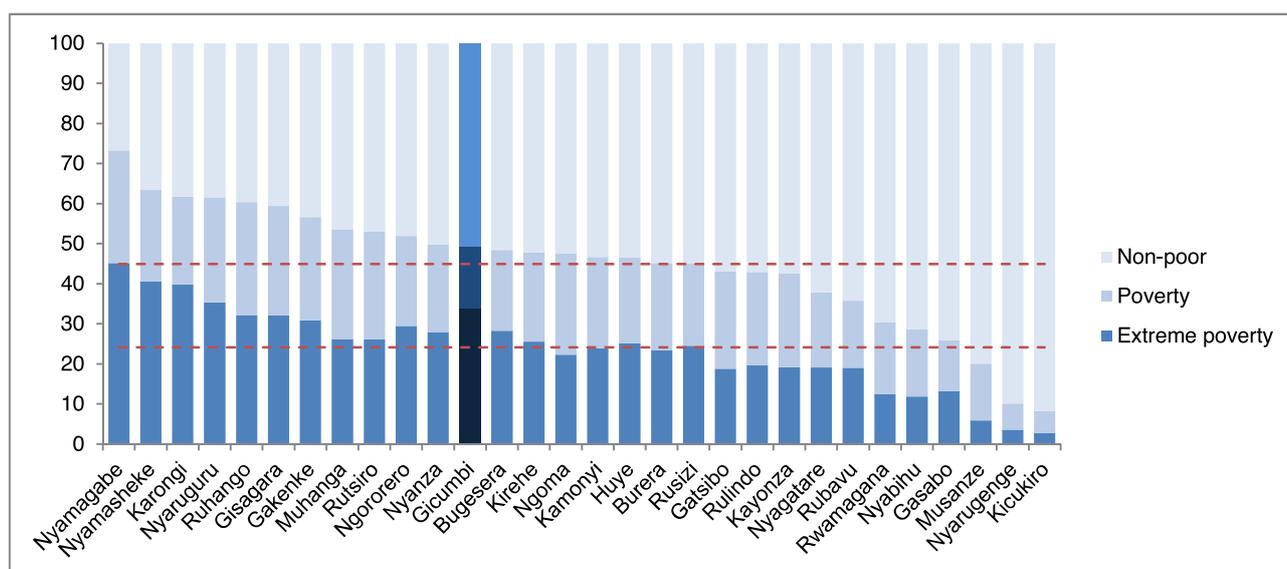

Source: EICV3. Note: Horizontal line represents national average.

3 Poverty

The poverty line defines a level of household consumption per adult below which a household is deemed to be poor. The poverty line used here is set with reference to a minimum food consumption basket, which was judged to offer the required number of calories required for a Rwandan who was likely to be involved in physically demanding work, along with an allowance for non-food consumption. An extreme poverty line was also set as the cost of buying the food consumption basket if nothing was spent on non-food at all; this line corresponds to RWF 83,000 and the poverty line is RWF 118,000.

Figure 3.1 presents the percentage of the population classified into extremely poor, poor and non-poor. In Gicumbi district, 50.7% of the population is identified as non-poor, 15.4% as poor and 33.9% as extremely poor. While compared with other districts of Northern Province, Gicumbi district has the highest percentage of extreme poor.

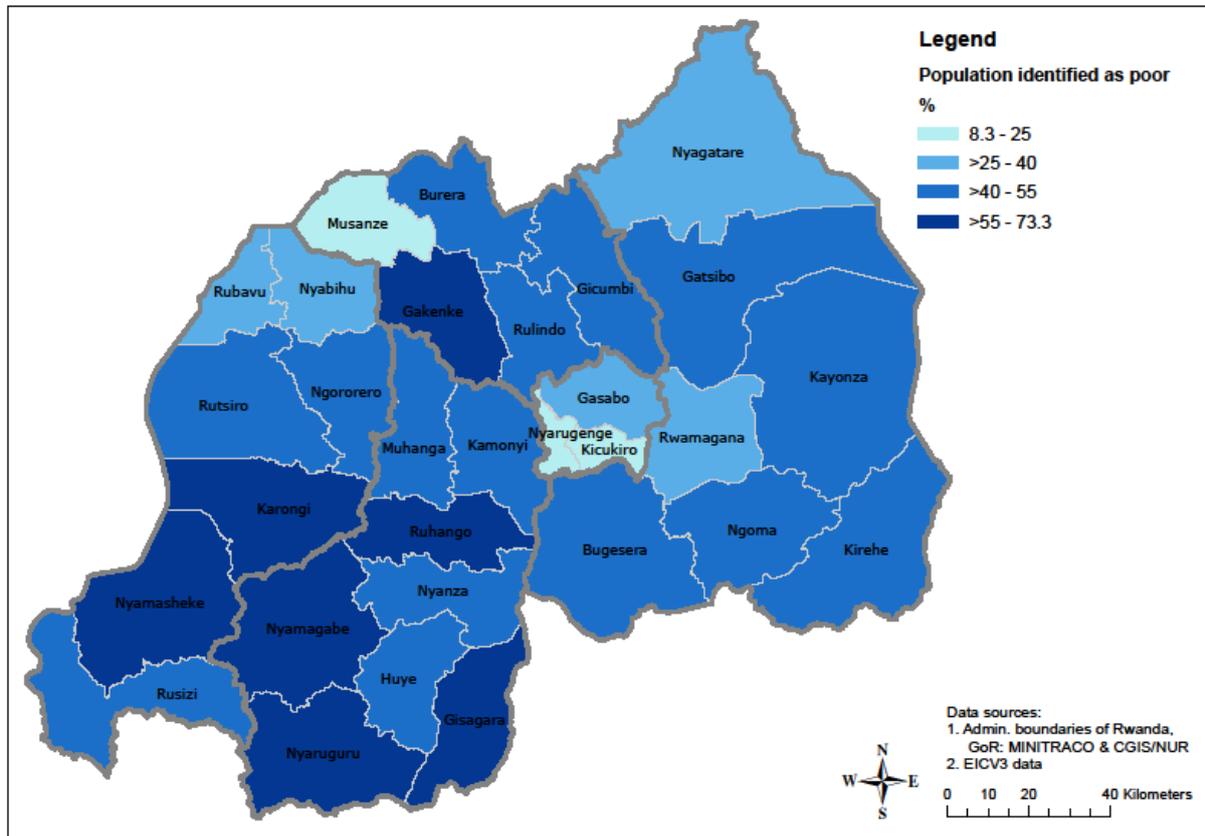

Figure 3.1 Percentage of population identified as poor and extremely poor, by district

Source: EICV3. Note: Horizontal lines represent national averages of poverty and extreme poverty. Districts sorted by overall poverty level.

As shown in Figure 3.2 below, Gicumbi district is among the districts with the proportion of the population identified as poor in the range of 40 to 55%. Only Nyarugenge, Kicukiro and Musanze have below 25% of their populations classified as poor.

Figure 3.2 Map: Percentage of population identified as poor, by district

4 Standard of living (utilities and amenities)

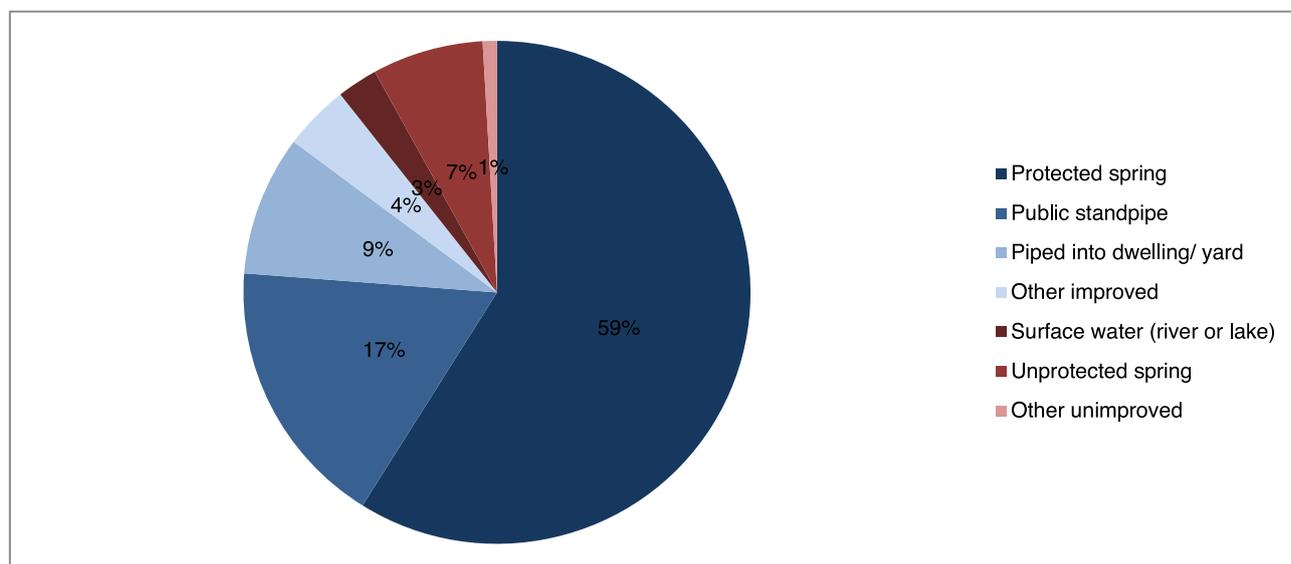

This section focuses on water and sanitation, energy and housing, ownership of selected durables, distance to facilities/ services, and use of financial services. The Vision 2020, Rwanda's vision of its future development, identified the utilities and amenities discussed in this section as all being crucial requirements for Rwanda's social and economic development.

4.1 Water and sanitation

According to EICV3, 89.4% of Gicumbi district households use an improved drinking water source. This places Gicumbi district first in Northern Province and fourth nationally after Nyarugenge, Rubavu and Huye. Improved drinking water sources include protected springs, public standpipes, water piped into dwelling/yard, boreholes, protected wells and rainwater collection, as defined by the World Health Organisation (WHO). Figure 4.1 shows that 26% of households in Gicumbi district use a public standpipe or water piped into a dwelling/yard; however, 10.6% of households still use an unimproved drinking water.

This Gicumbi district achievement is above the EDPRS national target for the water and sanitation sector, which is to increase access to drinking water to 85% by 2012.

Figure 4.1 Main source of drinking water (percentage of households) in Gicumbi

Source: EICV3. Improved sources presented in blue, unimproved in red.

As shown in Figure 4.2, Gicumbi district is among nine districts with between 80% and 94% of households using an improved drinking water source. These districts can be ranked as follows: Nyarugenge (94%), Rubavu (93.4%), Huye (91%), Gicumbi (89.4%), Gicumbi (84.7), Muhanga (84.4%), Nyanza (82.1%), Gisagara (82.1%) and Rwamagana (82%).

Figure 4.2 Map: Percentage of households using improved drinking water source, by district

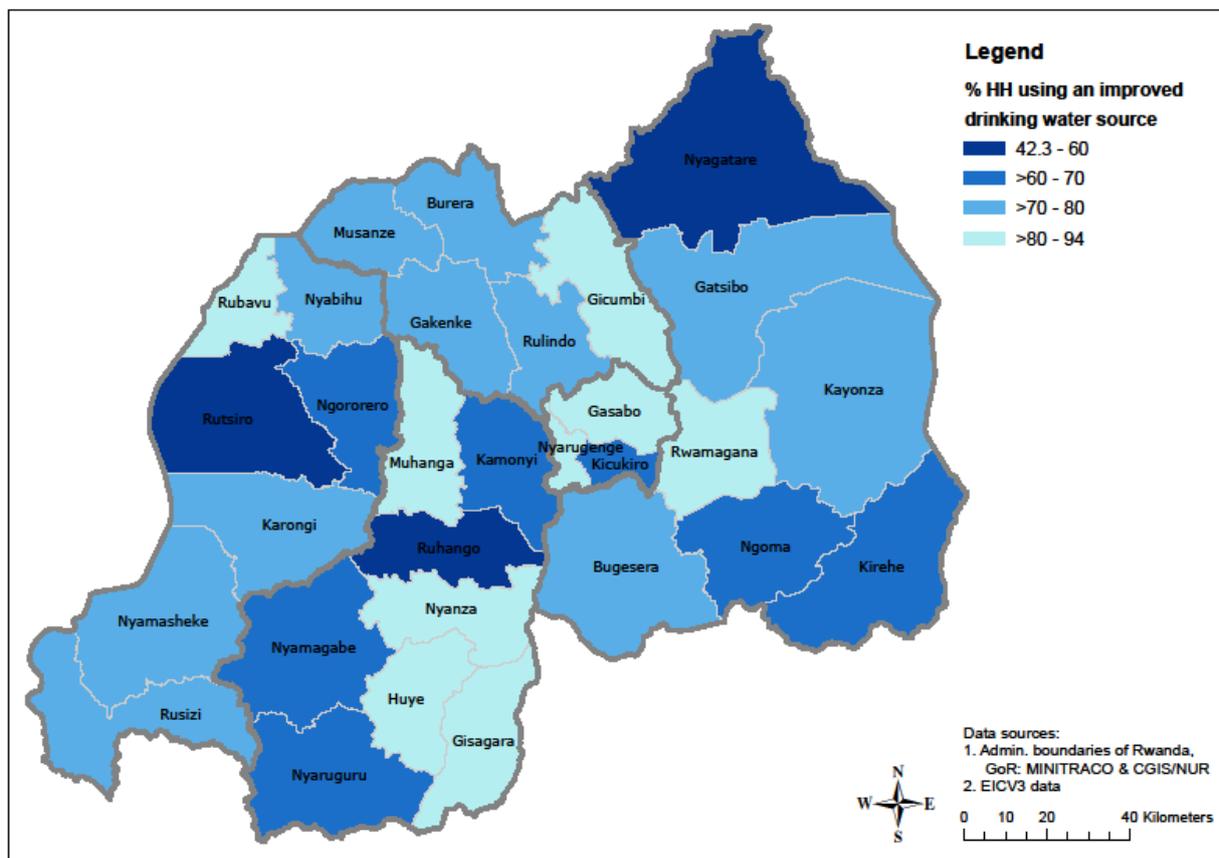

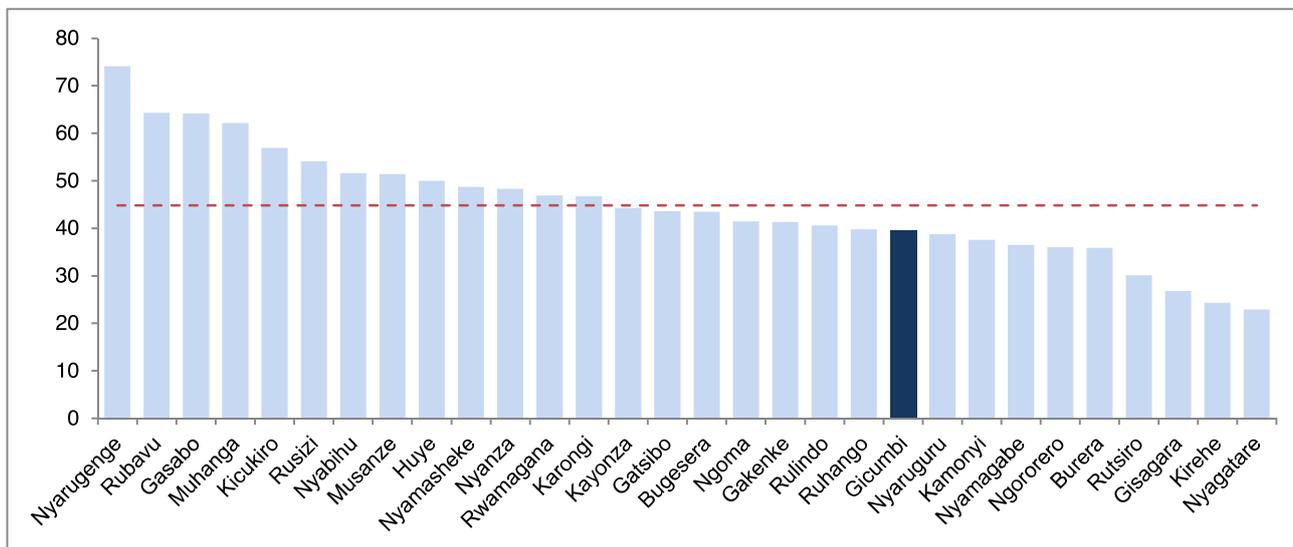

Figure 4.3 shows that 39.5% of households in Gicumbi district are within 15 minutes' walking distance of an improved water source. Gicumbi district comes below the national average of 44.8%. On the other hand, 28% of households in Gicumbi district still walk more 30 minutes to reach an improved water source and this is the highest percentage nationally.

The mean time to an improved water source in Gicumbi district is 20 minutes, which is higher than the national average (14.4 minutes). Gicumbi ranks second highest after Gisagara district (22.7 minutes).

Figure 4.3 Percentage of households within 15 minutes' walking distance to improved water source, by district

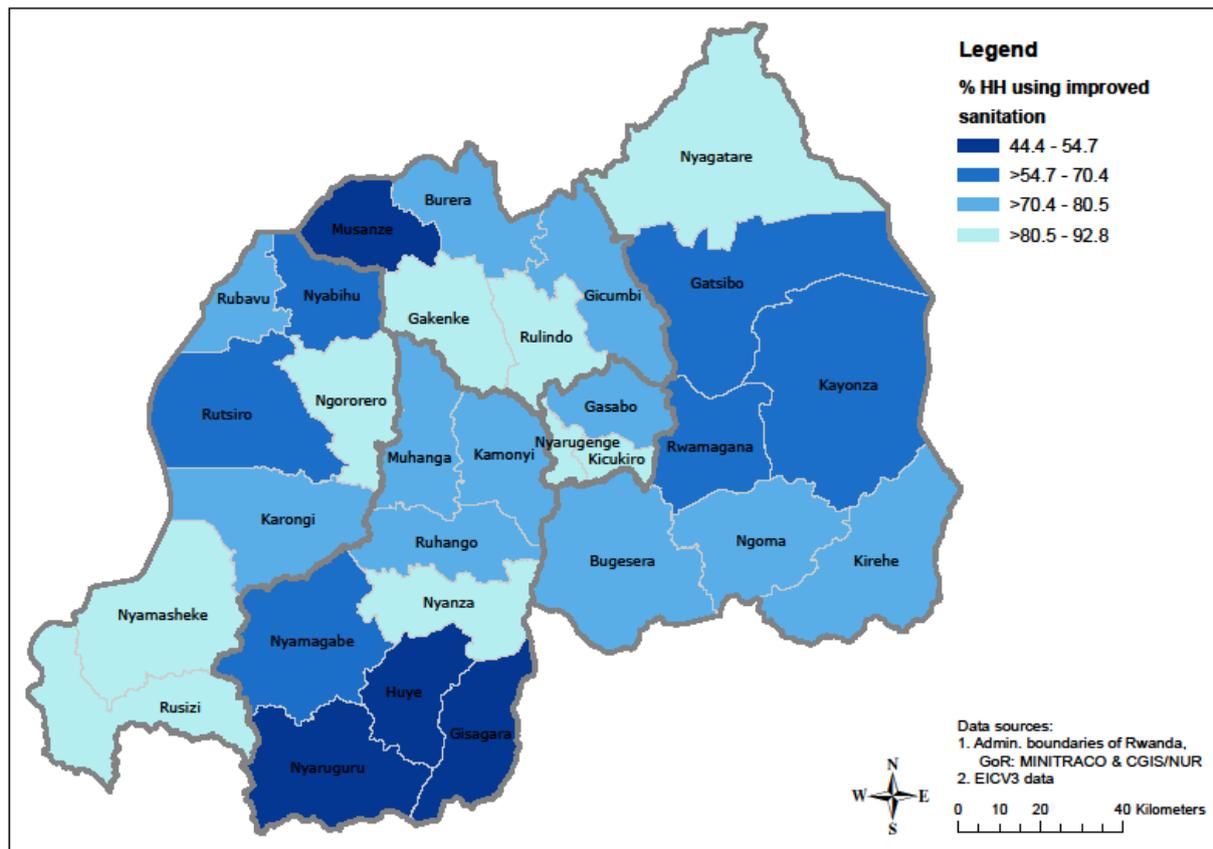

Source: EICV3. Note: Horizontal line represents national average.

The WHO/UNICEF Joint Monitoring Programme defines an 'improved sanitation facility' as flush toilets and pit latrines with a floor slab.²

Figure 4.4 presents the percentage of households with improved sanitation facilities by district. It shows that Gicumbi district has 76% of households with access to improved sanitation facilities, which is above the national average (74.4%). The EDPRS target on sanitation is to have 65% of the total population with hygienic sanitation by 2012. It is clear that Gicumbi district has achieved and even surpassed this target by more than 11 percentage points.

Figure 4.4 Map: Percentage of households using improved sanitation, by district

² <http://www.wssinfo.org/definitions-methods/watsan-categories/>

4.2 Housing and energy

This section describes the housing and energy characteristics of the household. The habitat sub-sector has the main objective of contributing to sustainable economic growth and the wellbeing of the Rwandan population by improving habitat and urbanism infrastructure. The sub-sector engages in a programme to modernise cities in Rwanda, especially in the habitat areas, with interventions to curb the proliferation of unplanned housing and to improve living standards in irregular neighbourhoods.³

The guiding documents of the sub-sector are the Vision 2020 and the EDPRS. As summarised in the sub-sector's EDPRS Self-Assessment Report (2008–2011), the objectives of the Vision 2020 with regard to human settlement are summarised as follows:

- Having urbanisation master plans and particular development plans for towns;
- Using urban land according to adopted plans; and
- Developing basic infrastructure in urban areas and other rural development zones.

The objectives of the EDPRS with regard to human settlement and management of public property are worded as follows:

- Planning and development of improved human facilities in both rural and urban areas;
- Sustainable and rational use of land and environmental protection;
- Designing urban master plans;
- Construction of regrouped settlements (Imidugudu);
- 10,000 ha of marked-out and improved plots;
- Restructuring of seven districts where the population suffer from bad living conditions; and
- Accommodating public facilities into comfortable buildings in accordance with the need for rapid and quality services.

In order to achieve these objectives, the sector has stipulated specific sub-programmes to be focused on:

- Real estate promotion, construction and maintenance of public buildings;
- Registration of land plots with all necessary statutory requirements;
- Imidugudu promotion and development of master plans;
- Support for housing financing;
- Establishment of main planning, urban architectural designs and simplified plans of 30 municipalities (district towns);
- Improvement of informal/peripheral neighbourhoods;
- Sensitisation on the standards of construction and urbanism as well as the protection of the urban **environment**; and
- Promotion of low cost and indigenous good materials and techniques for home building.

Energy is regarded a key requirement for the development of the national economy and essential for the development of industries and businesses as well as to the delivery of high-quality services from social institutions such as health facilities, schools and administrative offices.

³ Introduction to the habitat and urbanism sub-sector, MINIFRA (<http://www.mininfra.gov.rw/index.php?id=26>)

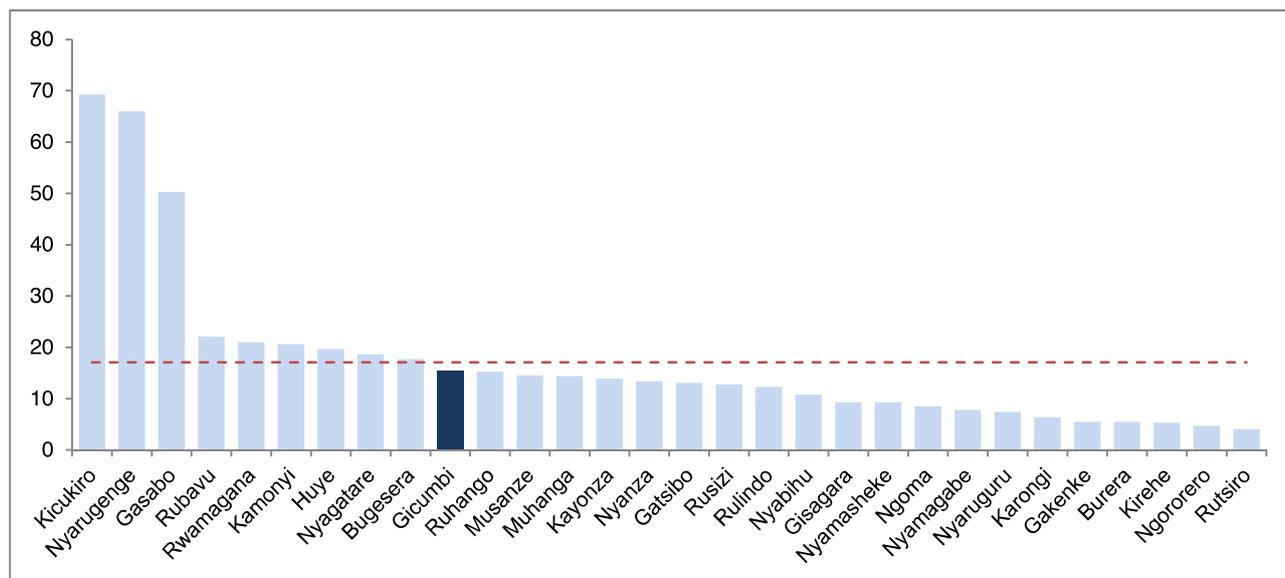

The EDPRS energy sector objectives are increasing access to energy, a sustainable tariff structure, diversification of energy resources, and security and strengthening of institutional framework and institutional capacity. Two main targets and indicators related to electricity generation capacity and numbers of electricity connections were defined for the period of the EDPRS.⁴

4.2.1 Dwelling characteristics

Figure 4.5 describes the construction material used for flooring by district. It shows that Gicumbi district is among the districts with a lower use of cement flooring material. Its proportion is 15.4%, which is below the national average at 17.1%.

Beaten earth is the most commonly used material for flooring in Gicumbi district (83.5%).

Figure 4.5 Percentage of households with cement floor, by district

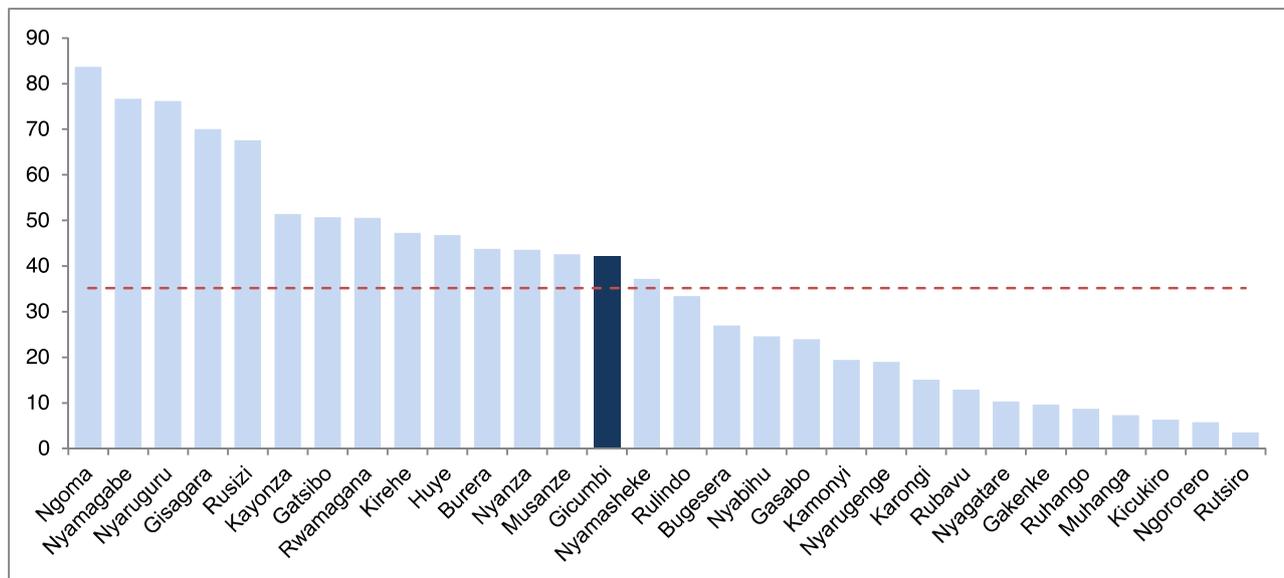

Source: EICV3. Note: Horizontal line represents national average.

⁴ Energy sector EDPRS Self-Assessment, EWSA, MININFRA, November 2011.

Figure 4.6 below presents the percentage of households using mud-covered tree trunks as their main wall material by district. The main wall material of dwellings were classified as follows: mud bricks, mud bricks covered with cement, tree trunks with mud, tree trunks with mud and cement, oven-fired brick, and other unspecified material.

In Gicumbi district, 42% of households use mud-covered tree trunks as their main wall material, followed by mud bricks (29.2%) and mud bricks covered with cement (19.2%). At national level, 35.2% of households use mud-covered tree trunks as a wall material; in urban areas the figure is only 17.1% and 38.3% in rural areas. It is clear that Gicumbi district is still below the national average in terms of improving wall construction material.

Figure 4.6 Percentage of households with mud-covered tree trunks as wall material, by district

Source: EICV3. Note: Horizontal line represents national average.

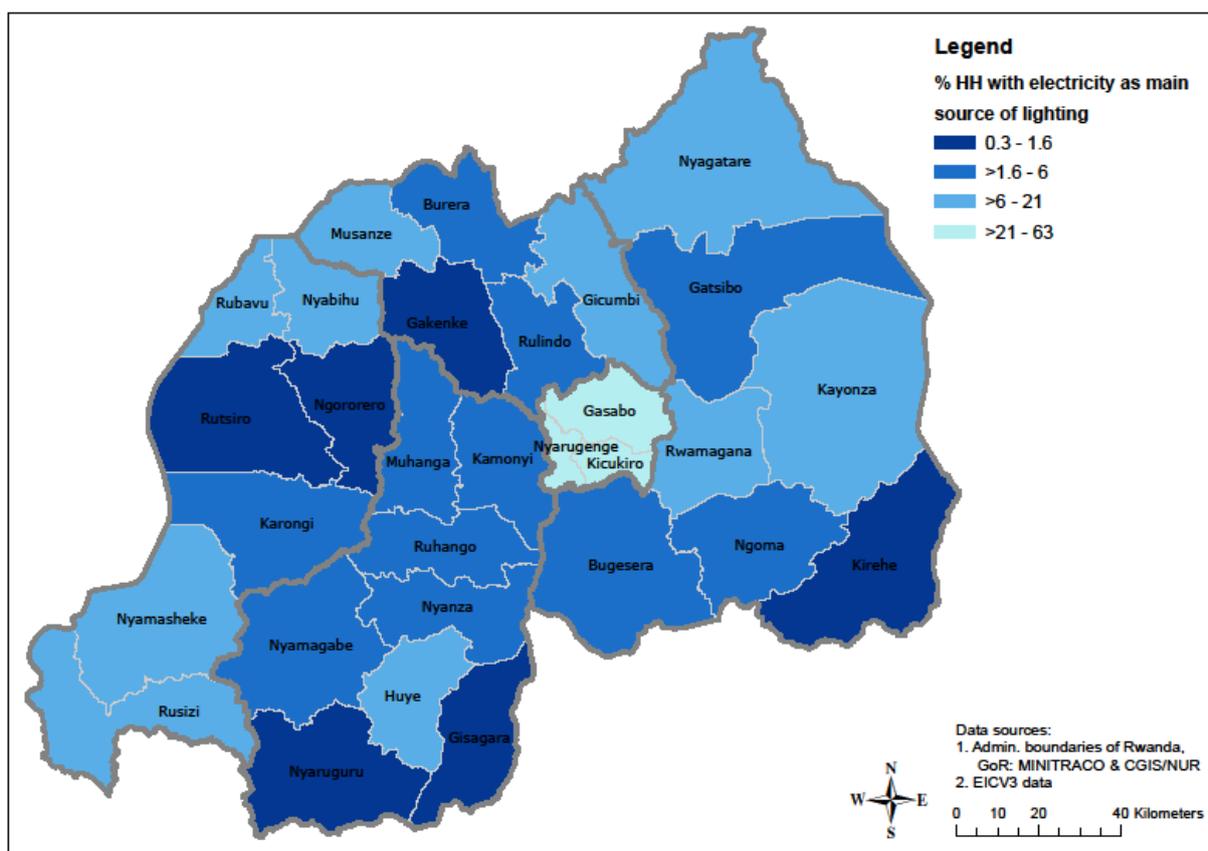

4.2.2 Energy characteristics

The primary sources of energy used for lighting by households were categorised as follows: electricity, oil lamp, firewood, candle, lantern, battery, and other unspecified sources.

Figure 4.7 presents the distribution of households using electricity as the main source of lighting by district. In Gicumbi district, 8.9% of households use electricity as their main source of lighting, ranking the district second in Northern Province after Musanze (14.5%), and ahead of Rulindo (2.6), and Burera (3.2%) and Gakenke (1%).

The urban area average for the proportion of households using electricity as the main source of lighting is 46.1%, while it is only 4.8% in rural areas and 10.8% at national level. Gicumbi district is therefore below the national and urban area averages.

Figure 4.7 Map: Percentage of households with electricity as main source of lighting, by district

4.3 Ownership of selected durables

The EICV3 provides information on ownership of selected ICT devices by district and categorises them into mobile phone, landline phone, computer, radio, TV set, and video/DVD player.

When the Vision 2020 was elaborated in 1998/99, the national consultative process stated: 'Telecommunication coverage in Rwanda is very low. The communication policy will take advantage of the small size of the country, its high population density and the single local language to attract investors so that the sector can be liberalised. By 2020, Rwanda projects to have internet access at all administrative levels, for all secondary schools and for a large number of primary schools. Telephone services will be widespread in rural areas'.

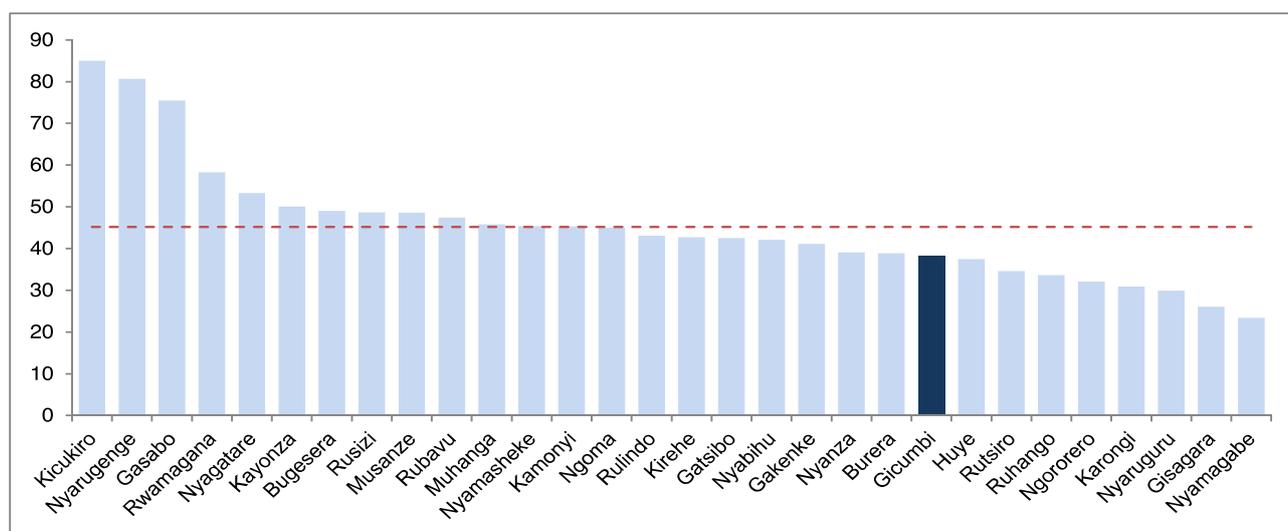

Ever since, the ICT sector has been regarded a key element of Rwanda’s development process. It is expected to create jobs, facilitate general economy development, and ensure that Rwanda will transform into a globally competitive, information-rich, knowledge-based economy.⁵

In line with these aspirations, the EDPRS/Common Performance Assessment Framework defines two sector-relevant progress indicators: ICT penetration in terms of voice (i.e. phone) and data (i.e. internet) services.

Figure 4.8 below describes the percentage of households owning a mobile phone by district. It shows that Gicumbi district has 38.3% of households owning a mobile phone, ranking it last within Northern Province after Musanze (48.6%), followed by Gakenke (41.1%), Burera (38.9%) and Rulindo (43.1%).

In urban areas, 71.5% of households own a mobile phone, while in rural area it is 40.6% and 45.2% country-wide. Gicumbi therefore ranks below national, urban and rural averages on this indicator.

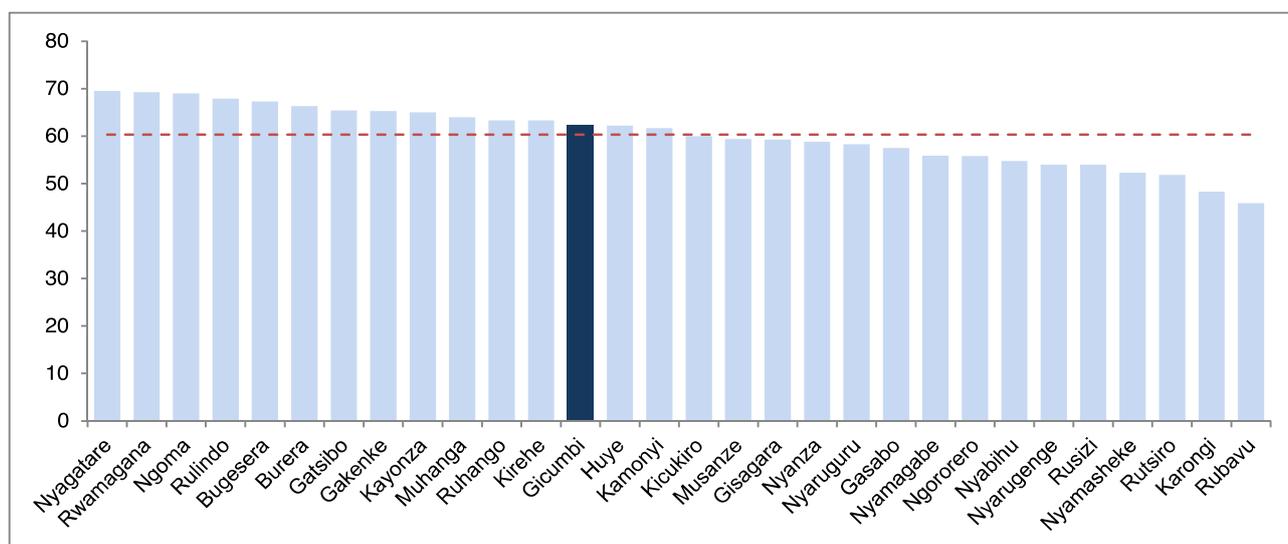

Figure 4.8 Percentage of households owning mobile phone, by district

Source: EICV3.

Figure 4.9 below describes the percentage of households owning a radio by district. In Gicumbi district, 62.3% of households own a radio. The national average is 46.7% while in urban areas it is 50.7% and in rural areas 45.9%. The top-ranked district on this indicator is Nyagatare with 69.5%.

Figure 4.9 Percentage of households owning radio set, by district

Source: EICV3. Note: Horizontal line represents national average.

⁵ ICT Sector EDPRS Self-Assessment Report, Ministry of Information and Communications Technology, December 2011.

4.4 Distance to facilities/services

Walking distance to basic services can be considered an indicator of both provision/coverage of such services and the remoteness of households' dwellings. The basic services were categorised into Food Market/Shop, Primary School, Secondary School, and Health Centre.

Figure 4.10 shows the mean walking distance to primary school by district. The mean walking distance to a primary school in Gicumbi district is 37.1 minutes, higher than the mean figure for rural areas (28.6 minutes), and 32.6% of households are between 30 and 59 minutes of a primary school. In urban areas, the mean walking distance to a primary school is 19.4 minutes, while it is 27.2 minutes country-wide.

Figure 4.10 Map: Mean walking distance to basic services (in minutes): Primary school, by district

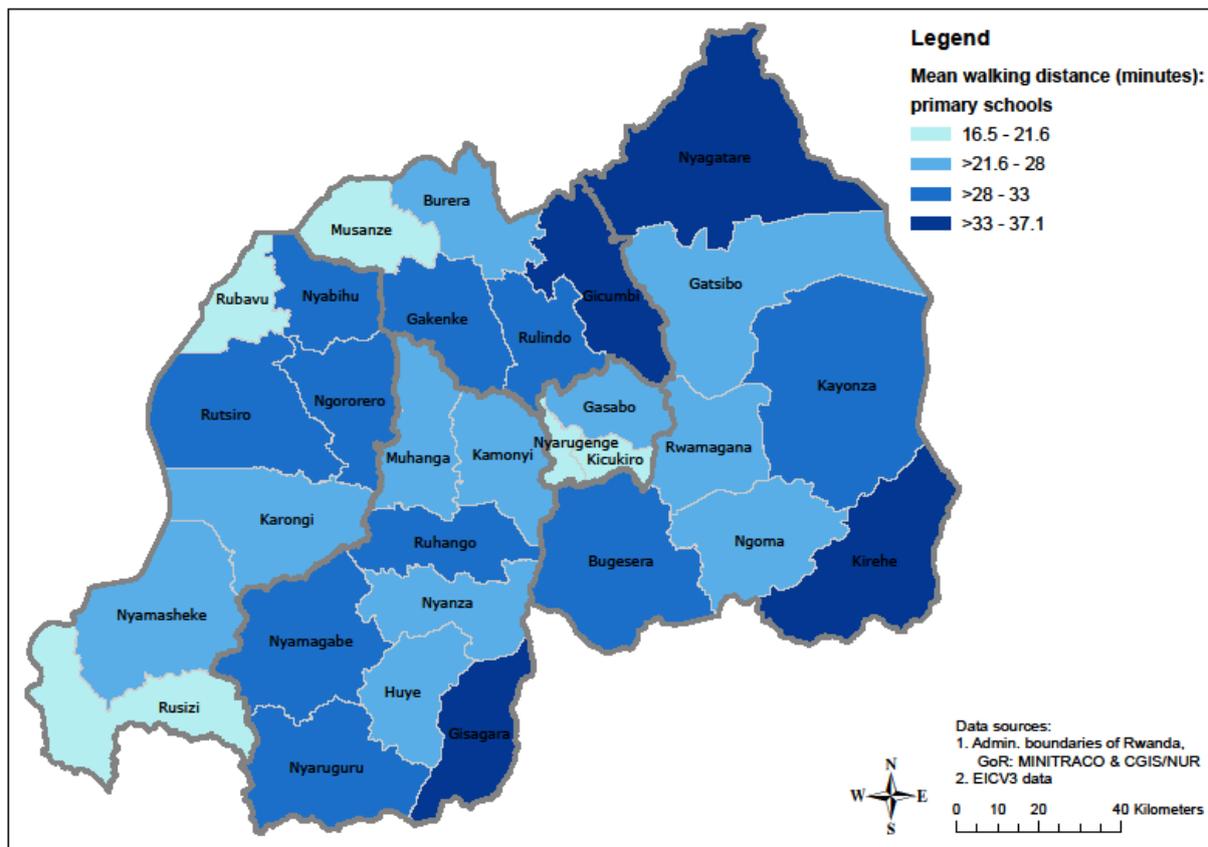

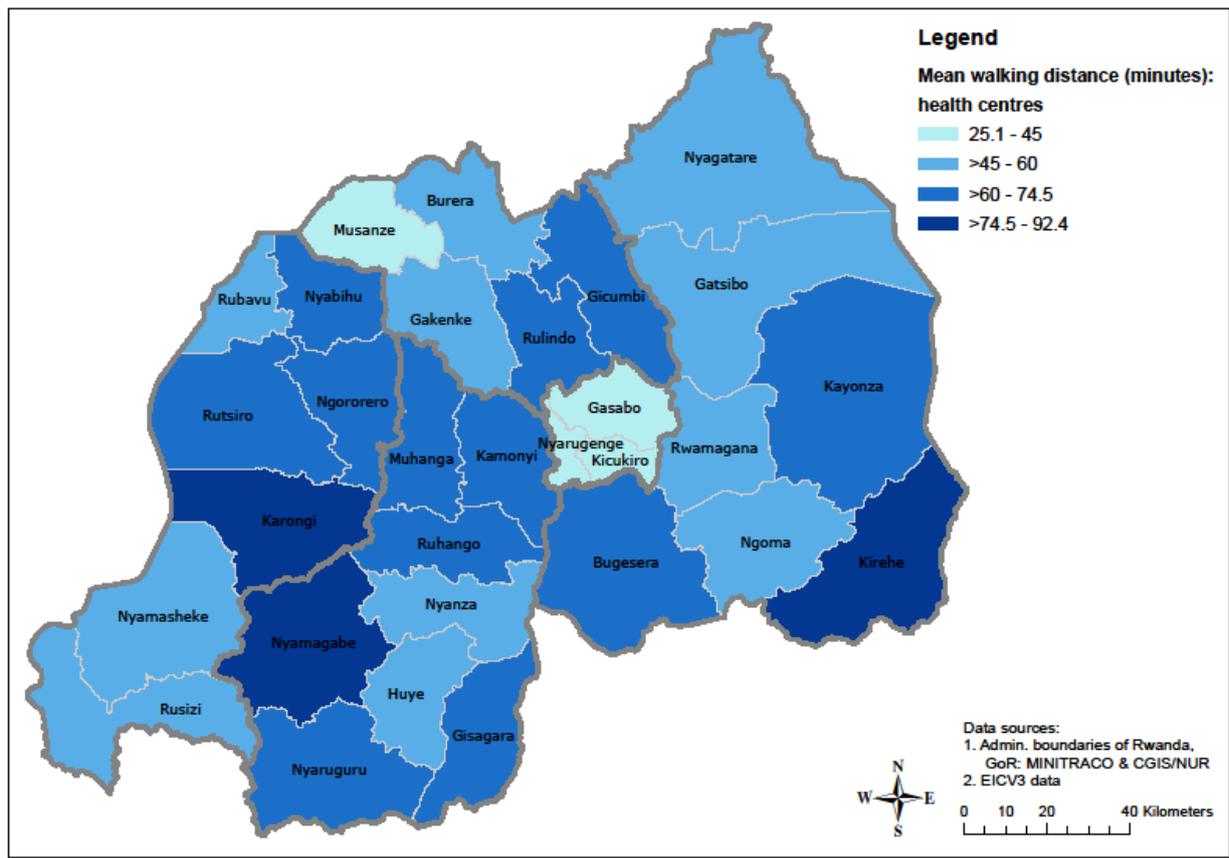

Figure 4.11 below shows the mean walking distance to health centre by district. In Gicumbi district, the mean walking distance to a health centre is 61.9 minutes and 44% of households walk for under an hour on average to reach a health centre.

The mean walking distance to a health centre is 35 minutes in urban areas and 64.4 minutes in rural areas, while it is one hour country-wide. When compared to urban areas, Gicumbi district health centres are on average an additional 26.9 minutes from household dwellings.

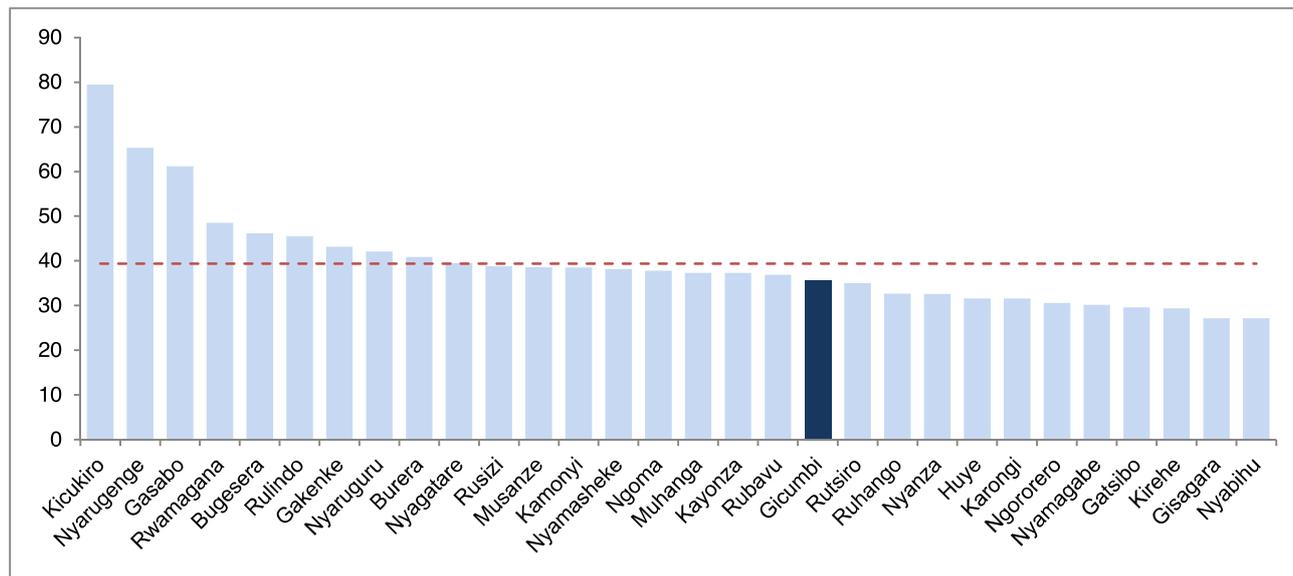

Figure 4.11 Map: Mean walking distance to basic services (in minutes): Health centre, by district

4.5 Use of financial services

Figure 4.12 presents the percentage of households with at least one saving account by district. It shows that in Gicumbi district, 35.7% of households have at least one saving account, ranking it last in Northern Province after Gakenke (43.2%), Burera (40.9%), Musanze (38.6%) and Rulindo (45.5%). At national level, 39.4% of households have at least one saving account.

Figure 4.12 Percentage of households with at least one savings account, by district

Source: EICV3. Note: Horizontal line represents national average.

5 Economic activity and income sources

5.1 Economic activity

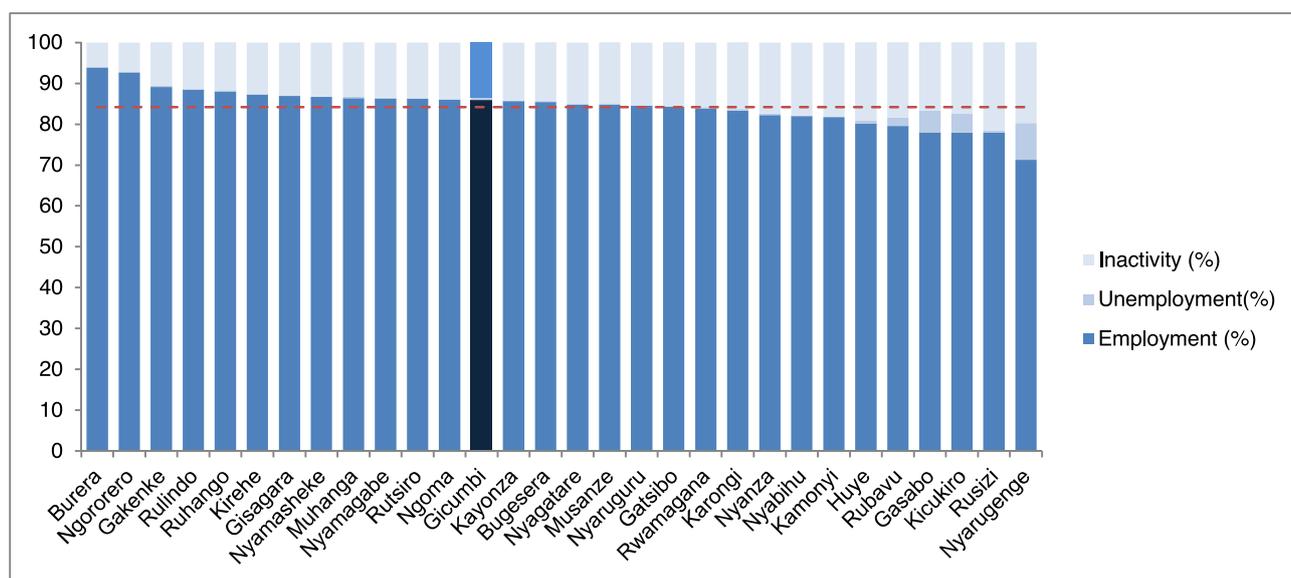

This section refers to the population aged 16 years and above, as 16 years is the legal working age in Rwanda. Employment questions were asked of all individuals aged six years and above but only data for those aged 16 years and above appear in this section. It should be noted that the survey collected data about all the jobs people did over a 12-month period, as well as about those they did in the last seven days. We refer to the former as usual economic activity and to the latter as current economic activity.

The formal International Labour Organisation (ILO) definition of unemployment is those people who work under one hour per week but are actively seeking work and able to start immediately. In many low-income countries that do not have social safety nets, formal unemployment is quite low because it is rare to be able to afford to do no work at all. We present here statistics for formal unemployment and an estimate for the small number of discouraged workers. We also look at broader measures such as underemployment, which consist of those working part time, but who would like to work more hours a week.

Figure 5.1 below presents usual employment, unemployment, and economic inactivity among persons aged 16 years and above by district

In Gicumbi district, the overall employment rate is 85.9% of the resident population aged 16 years and above; the unemployment rate is 0.7% and economic inactivity rate is 13.5%. As shown in Figure 5.1 below, Gicumbi district is among the districts with a high employment rate. The national average employment rate is 84%, the unemployment rate is 0.9% and the economic inactivity rate is 15%.

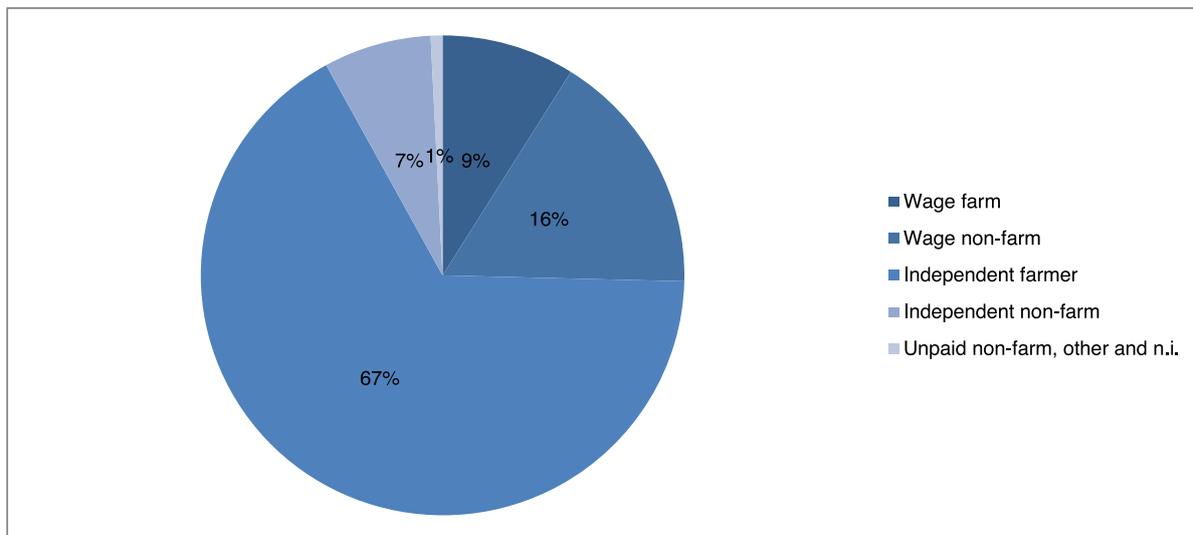

Figure 5.1 Economic activity: Employment, unemployment, and economic inactivity among persons aged 16 and above (usual), by district

Source: EICV3. Note: Based on all persons aged 16 and above. Horizontal line represents national average of employment rate.

Figure 5.2 presents employment types by the usual main job in Gicumbi district. It shows that most people aged 16 years and above in Gicumbi are independent farmers (67%). The second most frequent main job is wage non-farm (16%).

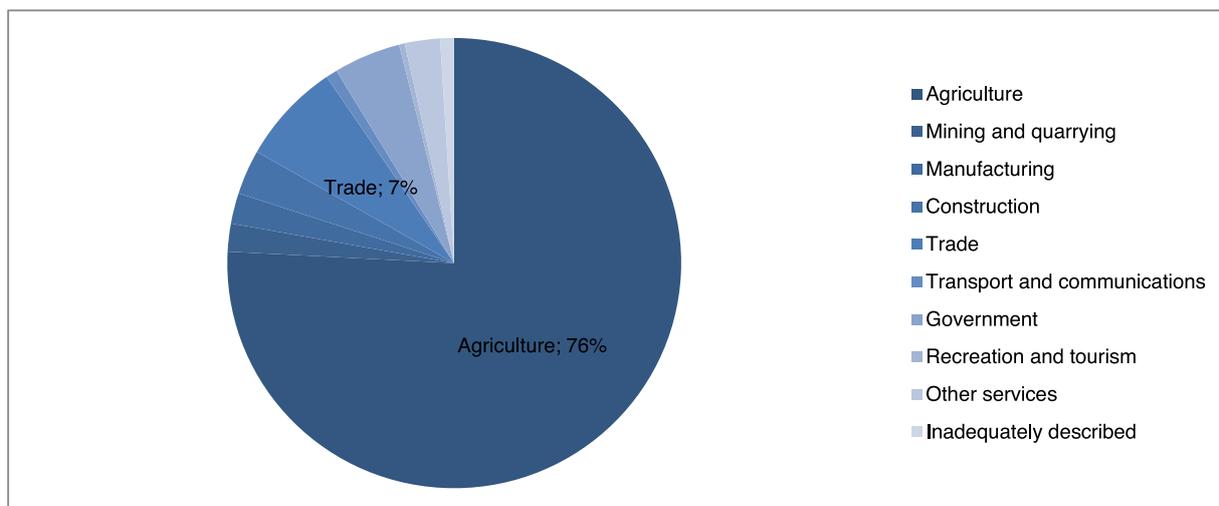

Figure 5.2 Employment types (usual main job) in Gicumbi

Source: EICV3. Note: Based on all persons aged 16 and above usually working.

Figure 5.3 describes the industry of usual main jobs in Gicumbi district. Agriculture is shown as the main industry, involving 76% of the population aged 16 year and above, followed by Trade (7%) and Government (4.8%).

Figure 5.3 Industry of usual main jobs in Gicumbi

Source: EICV3. Note: Based on all persons aged 16 and above usually working.

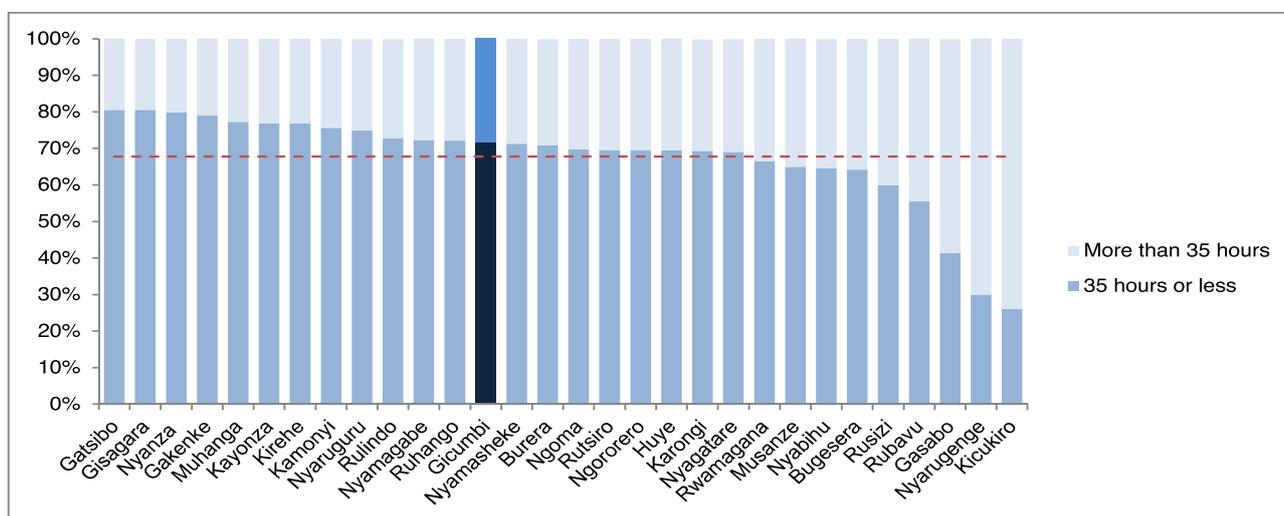

Figure 5.4 below presents the percentage of underemployed people – meaning the percentage of working people that worked 35 hours or fewer in all their jobs in the previous seven days – by district. Taking all the jobs that people did in the seven days before the survey we can start to understand underemployment. People whose main job is a waged job work on average 45 hours per week in all of their jobs (though this type of job holder is the least likely to be involved in more than one job). Those who work in small businesses as owners work 36 hours a week. Those who work as independent farmers work just 24 hours per week in all jobs, and waged farm workers work just 29 hours. People working on farms are the most likely to be working in more than one job at a time.

Setting a definition of underemployment at 35 hours a week or fewer, two-thirds of Rwandese adults can be defined as underemployed. Those working in farm jobs are the most likely to be underemployed, although it should be noted that farm workers must spend more time on gathering fodder for animals, fetching water and firewood, and marketing produce, which is not here counted as economic activity.

Only Northern Province has a significant percentage of the population working more than 35 hours a week. This is related to the higher than average proportion of jobs in Kigali that are non-farm paid work.

In Gicumbi district, 71.6% of adults worked 35 hours or fewer in all their jobs in the seven days prior to survey data collection and are classified as underemployed. This is higher than the national average of 67.8%.

Figure 5.4 Underemployment (percentage of working people that worked 35 hours or fewer in all their jobs in the previous seven days), by district

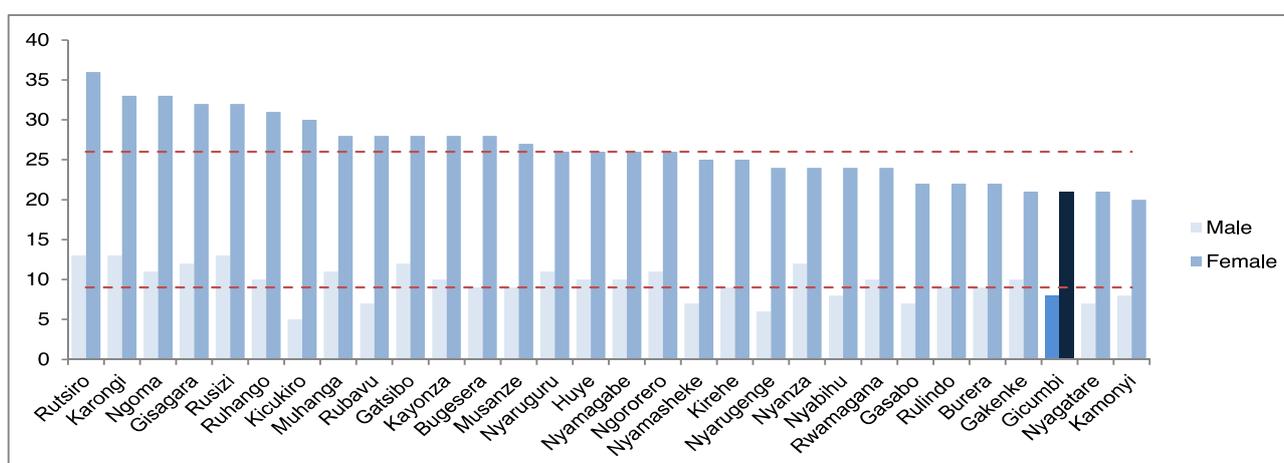

Source: EICV3. Note: Based on all adults aged 16 and above who worked in the previous seven days, and gave the numbers of hours worked in all their jobs. Horizontal line represents national average.

Figure 5.5 describes the median number of hours spent in the last seven days on domestic duties by men and women by district. All persons were asked how many hours they spent on domestic duties. Fetching water, fodder and firewood are officially classed as economic activity according to the ILO.

In Gicumbi district, the median number of hours spent on all domestic duties in last seven days, by all persons 16 and above, including working and non-working persons, is 16 hours where males spent eight hours and females 21 hours. The national median number of hours spent by females on all domestic duties is 26 hours, while males spent nine hours, together making an average of 19 hours.

Figure 5.5 Median number of hours spent in last seven days on domestic duties by men and women, by district

Source: EICV3. Note: Domestic duties include foraging for firewood, fodder searching, water fetching, going to the market, cooking, and other household chores. Fetching water, fodder and firewood are officially classed as economic activity according to the ILO. Estimates based on all adults aged 16 and above (both working and non-working). Horizontal lines represent the national average of median hours spent on domestic duties by men (lower line) and women (upper line). Districts are ordered by the median number of hours spent on domestic duties by women.

5.2 Income sources

This section focuses on five main components of income: agricultural income, wage income, business income, rent income, and income from transfers.

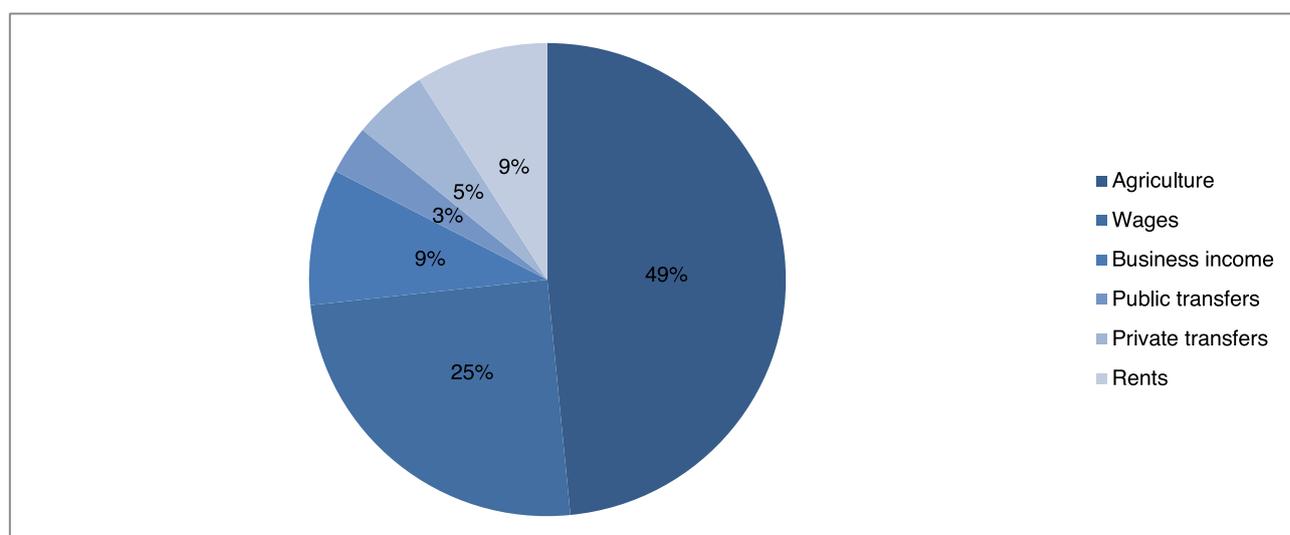

- Household agricultural income: this component is first divided into agricultural income (income from land cultivation) and livestock income. Unless otherwise specified, this report sums the two components into one agricultural component. It includes revenues from sale of crops, processed crop products, livestock products and other agricultural products, own consumption of food and non-food products, and the revenues from renting out livestock and sale of small animals. The income aggregate deducts costs on crop inputs, inputs used for processing crop products, and expenditure on livestock and the cost of renting land. Within the costs, the income aggregate includes the depreciation of land and agricultural equipment. The depreciation rate is equal to 0.2 per annum.
- Wage income: this includes cash and in-kind revenues received from farm and non-farm work. In-kind payments include food and other agricultural products, provision of house and other benefits received for the work.
- Non-farm self-employment (business): this includes income received net of labour and other inputs.
- Income from rents: this includes actual rents received from renting out livestock, agricultural equipment and land (rent and sharecropping), as well as imputed rental value of owner-occupied dwellings.
- Transfers: transfers include remittances received (cash and in-kind) and other private transfers. It also includes public transfers. Private transfers received from dowry and sales of assets and land are excluded.

All income values are in real terms, with the price index equal to 100 in January 2011. The price deflator used here to express values in real terms is the same one that was used in the poverty analysis. The price index is based on a general basket of goods including food and non-food items, thus implicitly assuming the income generated by a household is spent on this general basket of goods.

The EICV3 results shows that at the national level agriculture contributes the largest share of a household's income (46%), followed by wage income (25%), business income (i.e. self-employment), transfers, and rents.

Figure 5.6 below presents the household income shares in Gicumbi district. It shows that household income is driven by agriculture income (49%), the main driver, followed by wage income (25%) and business income (9%). The smallest contributor to household income in Gicumbi district is transfer income (public and private transfers) with 3%.

Figure 5.6 Household income shares in Gicumbi

Source: EICV3.

6 Agriculture

This section seeks to inform and support the development of the EDPRS2 with data from the EICV3 and focuses on the agriculture sector. It provides detailed insights into the living conditions of the Rwandan population with regard to agricultural production. Agriculture is the backbone of Rwanda's economy and the majority of households in Rwanda are currently engaged in some sort of crop or livestock production activity.

In recent years, the Government of Rwanda has implemented several ambitious programmes to increase the productivity of the agriculture sector. The motivation behind these actions is reflected in the Ministry of Agriculture's vision: 'Our Vision is to modernise Agriculture and Livestock to achieve food security. One of the key pillars of this vision is the transformation of Agriculture from subsistence to a productive high-value, market-oriented farming that is environmentally friendly and has an impact on other sectors of the economy.'

This section explores a wealth of evidence on agricultural production collected through the EICV3.⁶

6.1 Land

One of the major inputs in agricultural production is land. Rwanda is a small country with total arable land of about 1.4 million hectares.⁷

Given a growing population combined with strong reliance on agriculture, it is clear that land is one of the scarcest resources in Rwanda. The EICV collects detailed data on land use and the agricultural activities of Rwandan households. It is however important to note that the EICV is not a specialised agricultural survey.

Since the EICV does not require that the plot sizes of a household are measured, it is possible that estimates of land size are not as reliable as those that would be obtained by a specialist agricultural survey, nor are issues of land quality addressed.⁸ Here we classify households which cultivate land into the following categories; very small cultivators (under 0.3 ha), small cultivators (0.3 to 0.9 ha), medium cultivators (0.9 to 3 ha) and large cultivators (more than 3 ha).

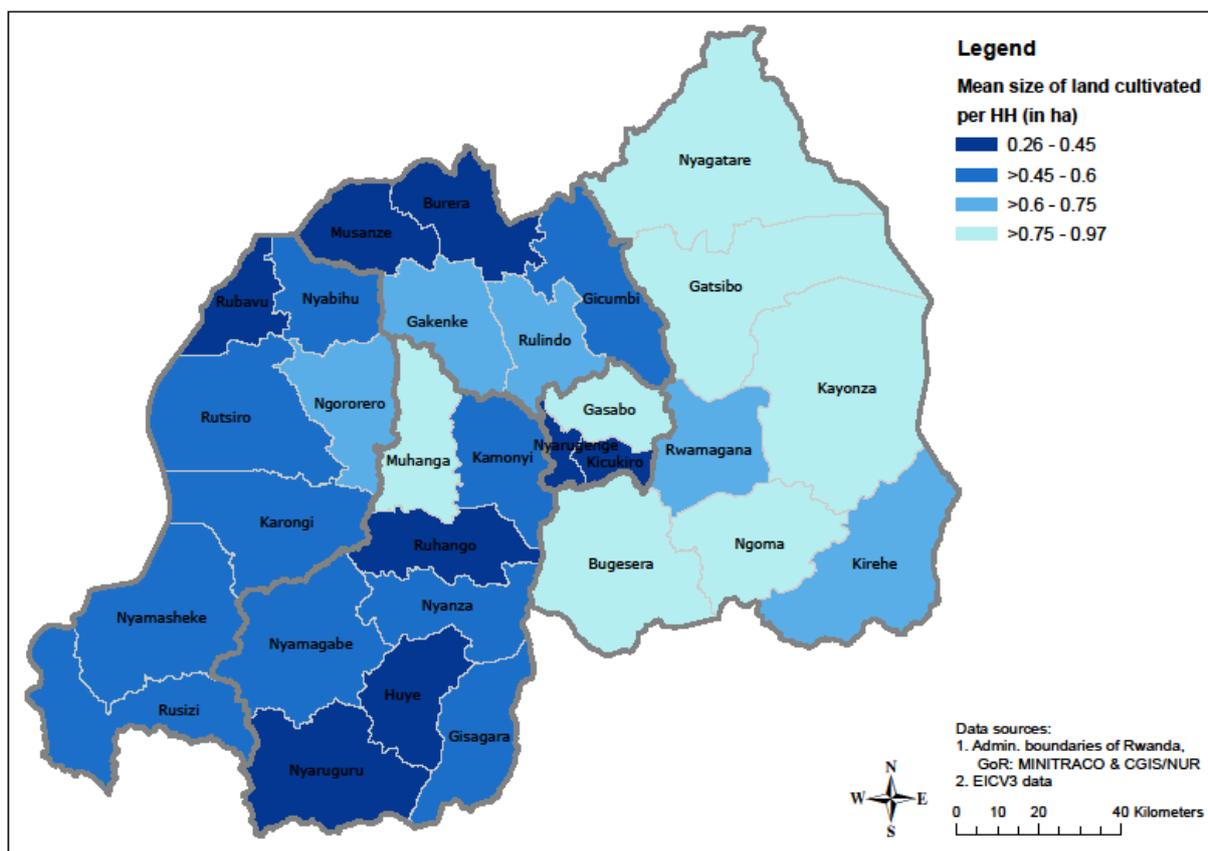

⁶ Sample size of EICV3: 14,308 households. District-level estimates for selected indicators can be found in Annex A.

⁷ Rwanda State of Environment and Outlook, REMA/UNEP, 2009.

⁸ The CFSVA 2009 survey estimates that nationally, 19% cultivated under 0.1 ha, 37% under 0.2 ha, and 59% under 0.5 ha. EICV3 estimates that 16% cultivated under 0.1 ha, 32% under 0.2 ha, and 66% under 0.5 ha.

Figure 6.1 shows the mean size of land cultivated per household (in ha), by district. For Gicumbi district, the mean size of land cultivated per household is 0.49 ha, which is below the national average (0.59) and rural average (0.6), but above the urban average (0.46). Gicumbi district has 85.6% of households cultivating under 0.9 ha of land.⁹

Figure 6.1 Map: Mean size of land cultivated per household (ha), by district

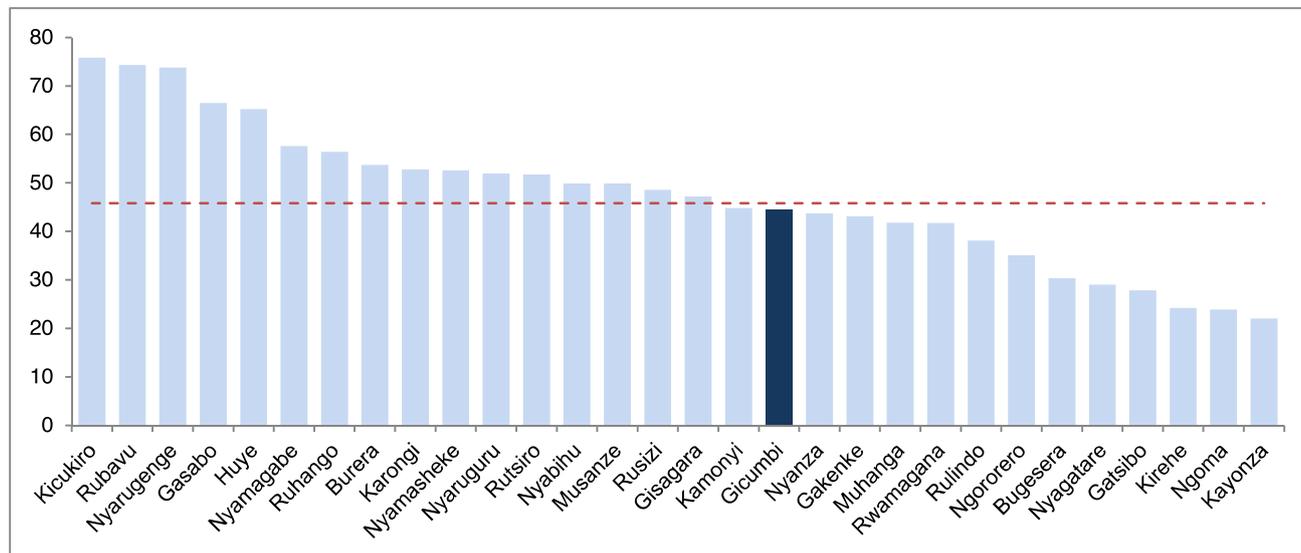

⁹ The Food and Agriculture Organisation estimates that on average a Rwandan household requires at least 0.9 ha to conduct sustainable agriculture (National Land Policy Report).

Figure 6.2 below presents the proportion of households cultivating under 0.3 ha land by district and shows that they represent 44.4% in Gicumbi district. This is less than the urban average of 67.3%.

Gicumbi district has 0.5% of cultivating households with land above or equal to 3 ha. Nationally, 1.9% of cultivating households are this category, 2.6% in urban areas and 1.8% rural areas.

Figure 6.2 Percentage of cultivating households with under 0.3 ha land, by district

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

Figure 6.4 Map: Percentage of land protected against soil erosion, by district

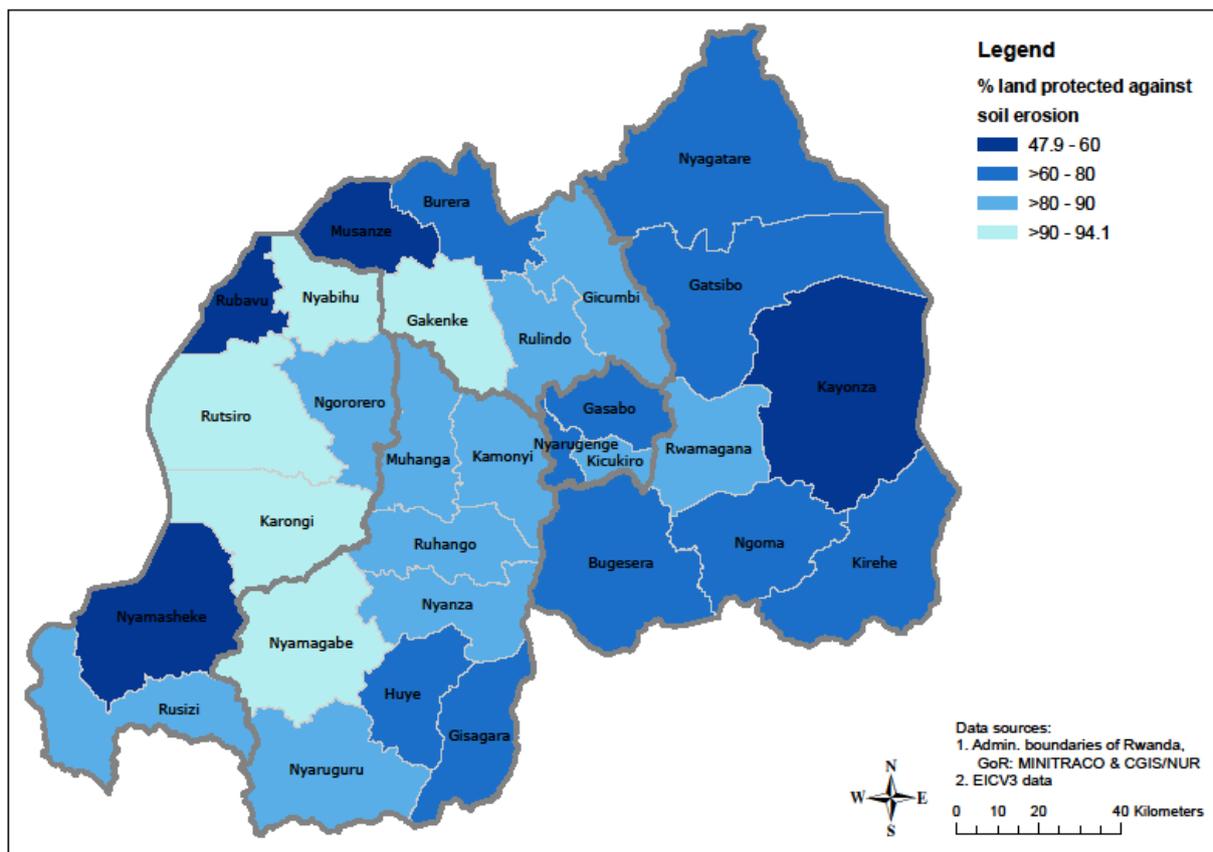

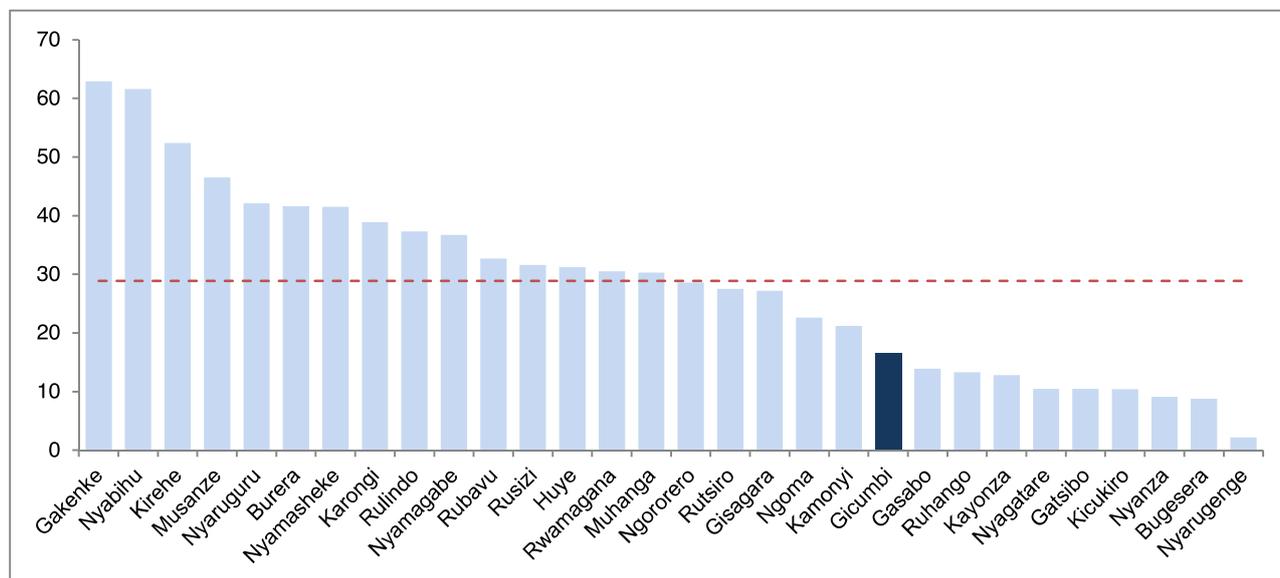

Figure 6.5 presents the percentage of percentage of agricultural households incurring expenditure on chemical fertiliser by district, which in Gicumbi district is around 16.5%.

The national average is around 29% with Gakenke district incurring the highest (63%) percentage and Nyarugenge district incurring the lowest (2.2%).

Figure 6.5 Percentage of agricultural households incurring expenditure on chemical fertiliser, by district

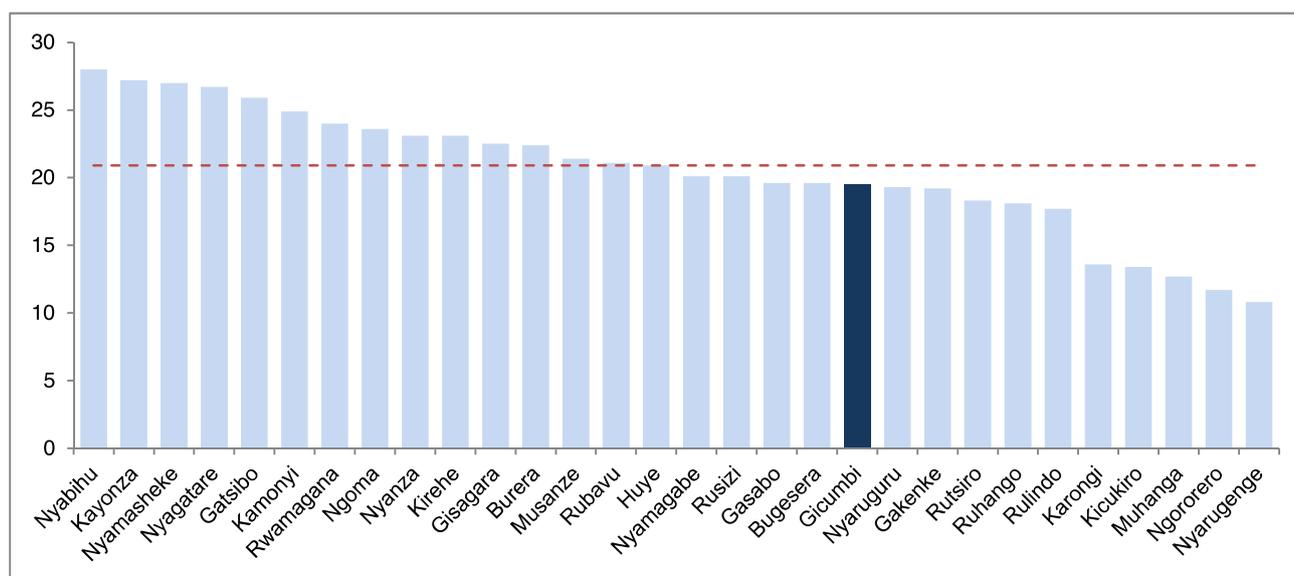

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

6.3 Commercialisation of crop production

Figure 6.6 below presents the mean share of harvest sold, by district. Commercialisation of crop production overall, as measured by the share of harvest sold (including households selling zero crops), is 19.5% in Gicumbi district. It is 20.9% at national level and around 20% in all other provinces outside Kigali City. It is the highest in Nyabihu district (28%) and lowest in Nyarugenge district (10.8%).

The mean share of harvest sold for fruit and vegetables (19.7%) is slightly higher than for staple crops (17.3%) in Gicumbi district and this pattern is similar at national, urban and rural areas level.

Figure 6.6 Mean share of harvest sold, by district

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

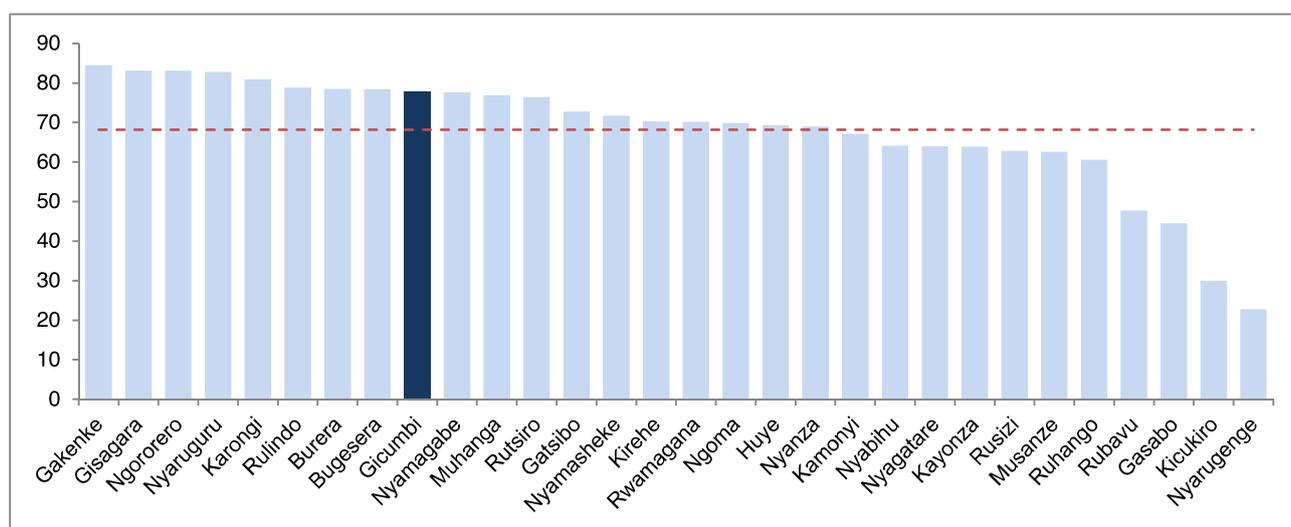

6.4 Livestock

In addition to crops, livestock is another important source of income and food for agricultural households.

Figure 6.7 presents the percentage of households raising livestock over the last 12 months by district and shows that 77.8% of all households in Gicumbi district raise some type of livestock.

This percentage is 68.2% at national level, 72.8% in rural areas, 41.8% in urban areas and is between 69% and 76% in other provinces, excluding Kigali City where it is 34.5%.

Figure 6.7 Percentage of households raising livestock over the last 12 months, by district

Source: EICV3. Note: Horizontal line represents national average.

7 Education

Rwanda Vision 2020 acknowledges Rwanda as 'suffering from serious deficiencies in terms of trained human capital' and states as its major objective, the creation of 'a knowledge-based and technology-led economy' for which 'comprehensive human resources development is considered to be one of the necessary pillars [for Rwanda] to reach the status of a middle income country (US\$ 220 GDP/capita in 2003 to US\$ 900 GDP/capita by 2020)'.¹⁰

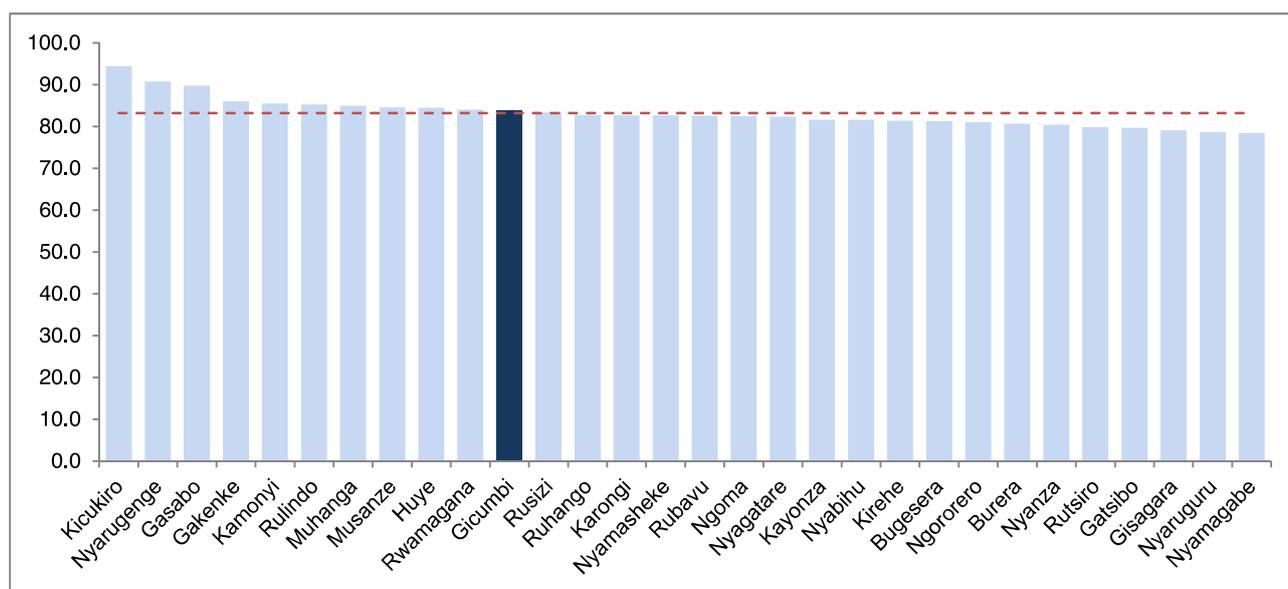

Although education is this section's general theme, it focuses essentially on access to education rather than other areas of interest such as pupil/student performance and the quality of services delivered by the education system in Rwanda. This is because the EICV3 did not collect the data necessary for a comprehensive review of these areas of interest.

7.1 Schooling and literacy

Figure 7.1 below presents the percentage distribution of individuals aged six and above that have ever attended school by district.

Gicumbi district is ranked eleventh at national level and fourth in Northern Province with 83.7% of individuals aged six having at some time attended school. The top-performing district is Kicukiro (94.4%) followed by Nyarugenge (90.7%). All other districts range from 78.4% to 86%.

Figure 7.1 Percentage of individuals aged six and above that have ever attended school, by district

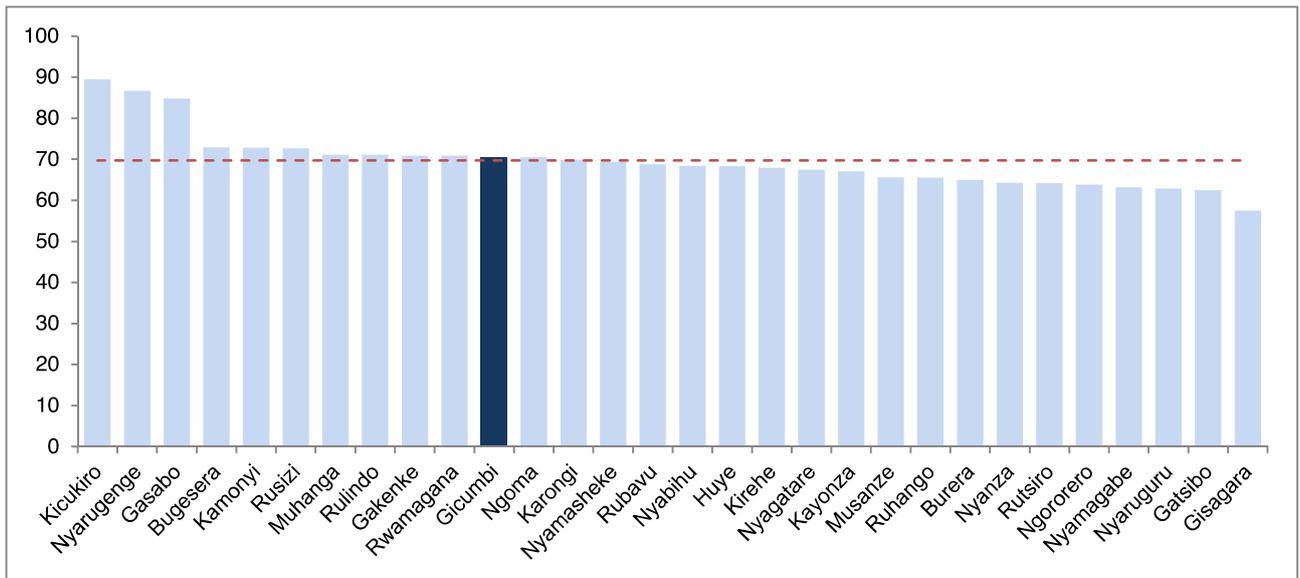

Source: EICV3. Note: Based on all persons aged six and above. Horizontal line represents national average.

Figure 7.2 shows that Gicumbi district is ranked eleventh at national level with a literacy rate of 84.8% among the population aged 15 and above. Apart from Kicukiro (89.5%) and Nyarugenge (86.7%), which are ranked first and second respectively, other districts range from 56.5% (Gisagara) to 72.9% (Bugesera).

At national level, the average level of literacy rate is 69.7%. It is 82.6% in urban areas and 67.3% in rural areas. The average level of literacy rate in the provinces ranges from 67.5% in Southern Province to 68.7% in Northern Province, excluding Kigali City where it is 86.7%.

¹⁰Rwanda Vision 2020, p. 6.

Figure 7.2 Literacy rate (%) among population aged 15 and above, by district

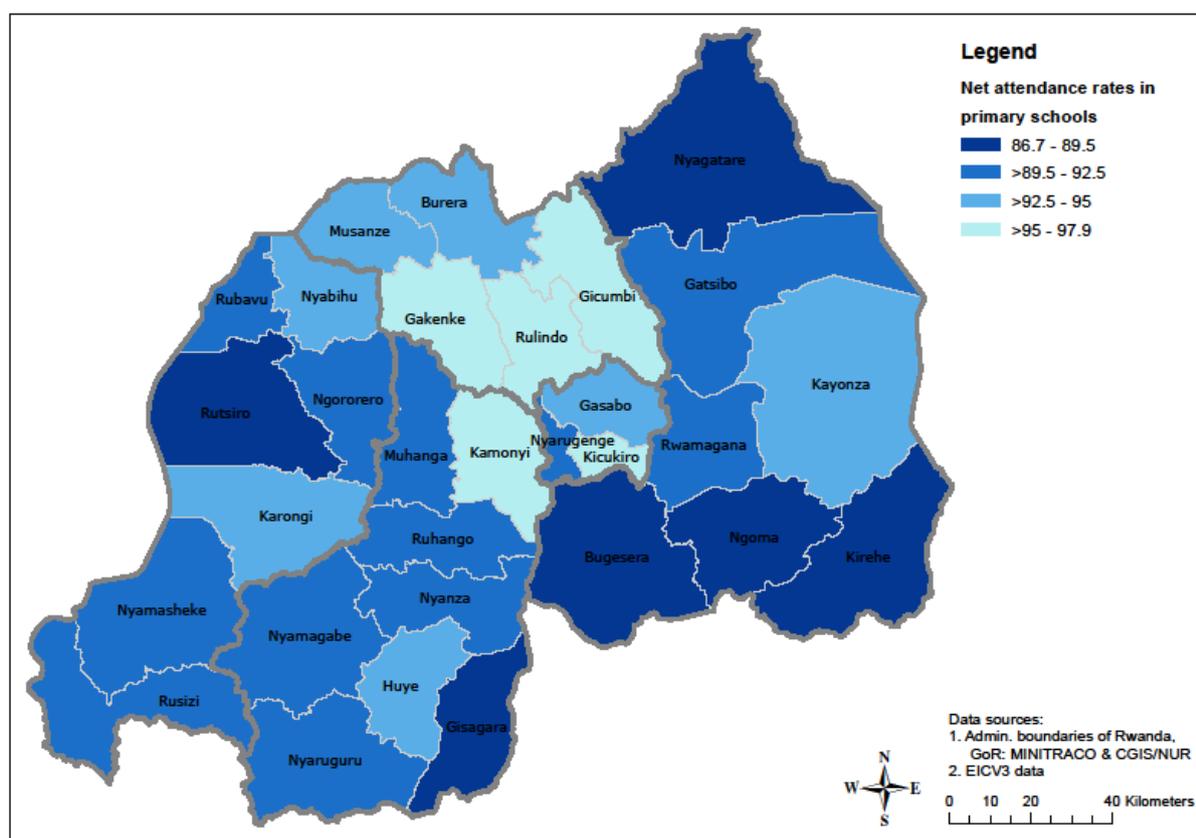

Source: EICV3. Note: Based on all persons 15 and above. Horizontal line represents national average.

7.2 Primary and secondary education

In Rwanda, the education and training system is structured into four main levels. A pre-primary level, which lasts three years, precedes the primary level that lasts six years. Above primary school, two levels exist, the first being a technical or vocational education, which aims at preparing students to enter the labour market once they complete this level, and the second being a secondary education, aimed at those students that wish to pursue a college or university degree before entering the labour market. Each of these levels is a six-year long programme. A fourth level is available for those completing secondary education or, in some cases, such as technical courses like those in the area of engineering, the technical or vocational levels. This education level is referred to as higher learning and comprises colleges and universities, lasting a maximum of seven years. The Nine-Year Basic Education Policy aims at ensuring that all children are 'able to get education in nine years (six years of primary education and three years of general cycle of secondary education) without paying school fees'.¹¹

Figure 7.3 presents the net attendance rates (NARs) in primary school, by district. The NAR in primary school for Gicumbi district is 97.9%, above the national average of 91.7%, the urban (93.3%) and rural (91.5%) area averages and the average for Kigali City (94.1%). Gicumbi district has the highest NAR in Northern Province.

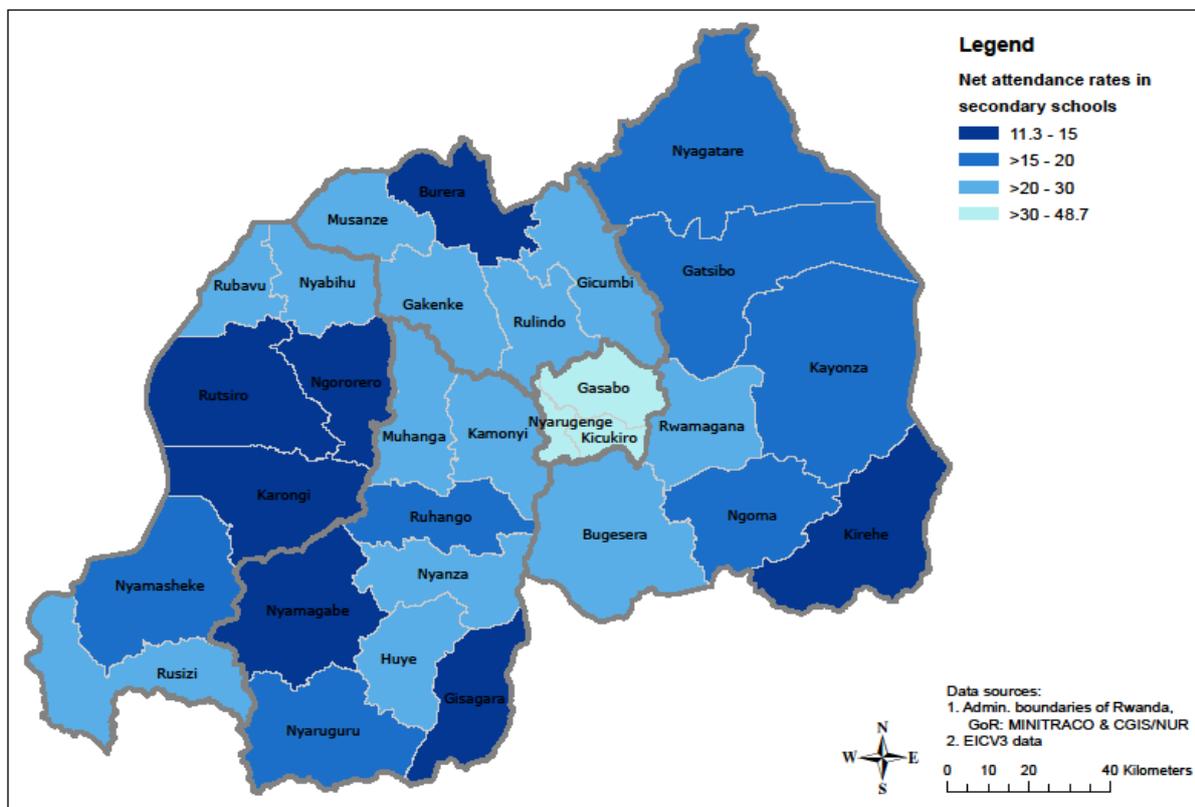

Figure 7.3 Map: NARs in primary school, by district

¹¹ Nine-Year Basic Education Implementation – Fast Track Strategies, p3, MINEDUC, November 2008.

Figure 7.4 below presents the NARs in secondary school by district. Gicumbi district has a NAR in secondary school of 25.8%, which is above the national average (21%) and above the rural area average (18.2%) but less than the urban area average (37.4%).

Figure 7.4 Map: NARs in secondary school, by district

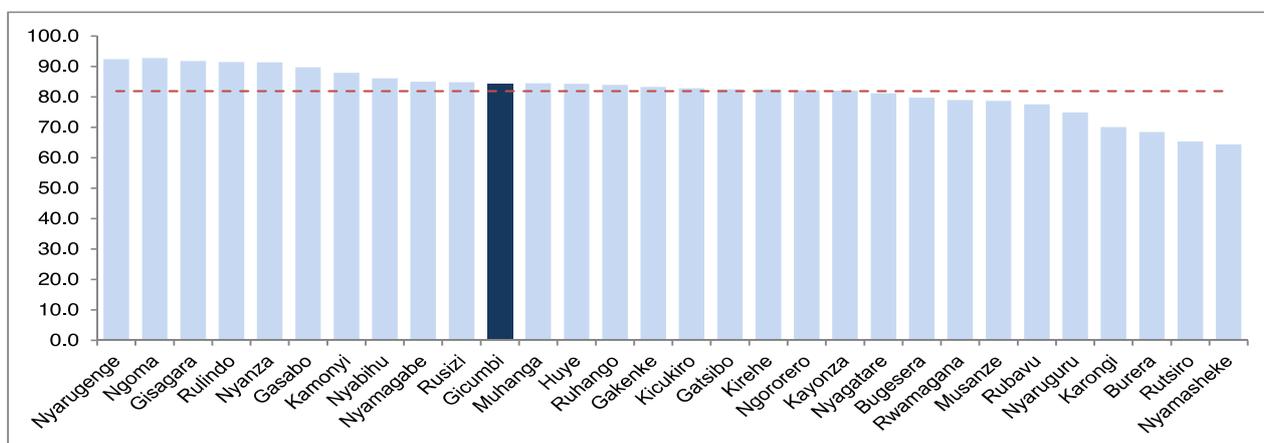

The EICV3 survey asked users of all levels of the education system questions about their satisfaction with the education services received. Although on a self-perceived basis, these questions allow for a review of the progress observed in the level of satisfaction of users.

Figure 7.5 below presents these results by district. Across all Gicumbi district, 84.5% of the users of education services in 2010–11, were satisfied with these services. This is above the national level of users' satisfaction (81.9%).

The results show that satisfaction is lower among users in rural areas (80.9%) than in urban areas (87.1%).

Figure 7.5 Percentage of users satisfied with education services, by district

Source: EICV3. Note: Based on all persons currently attending education. Horizontal line represents national average.

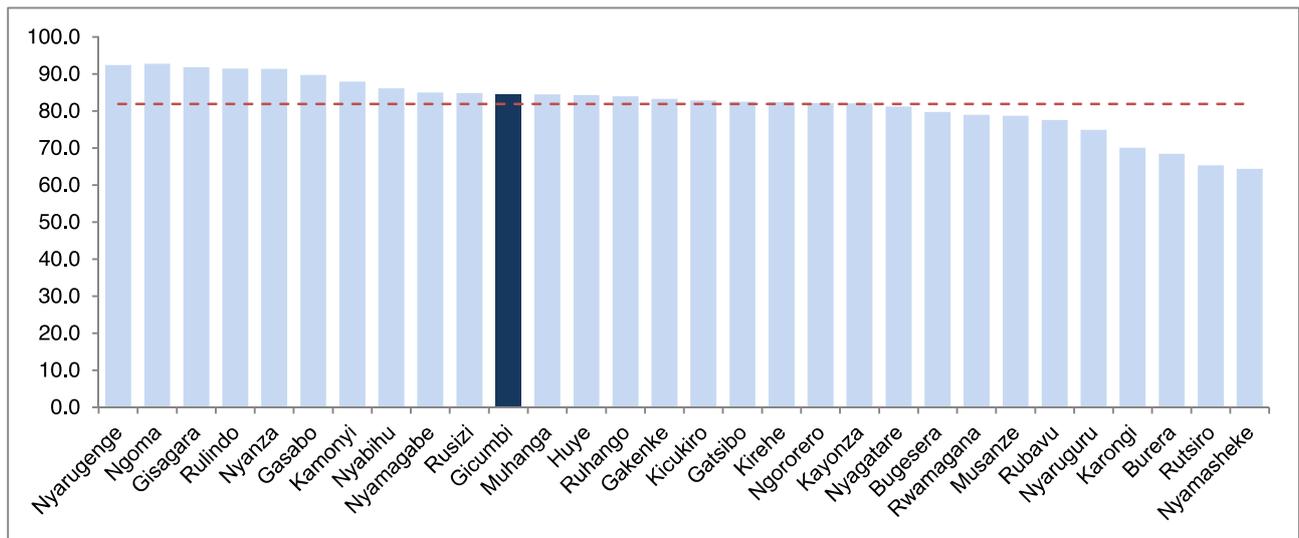

7.3 ICT education

Figure 7.6 presents results of a broader approach, investigating computer literacy in the overall population aged six and above that have used a computer before and would feel confident about using one again, by district.

The survey results show that 7.2% of Gicumbi district have used a computer before and would feel confident using one again. Gicumbi ranks first in the Northern Province and fourth at national level.

Among the urban population, 14% can be classified as computer literate, but this applies to only 2% of the rural population. Only 4% at national level can be classified as computer literate.

Figure 7.6 Computer literacy: Percentage of population aged six and above that have used a computer before and would feel confident about using one again, by district

Source: EICV3. Note: Horizontal line represents national average.

8 Vulnerable groups

Groups that are considered particularly vulnerable by the Government of Rwanda are children under five years old, elderly people aged 60 and over, and people with disabilities. The government delivers a core set of social protection programmes through the Ministry of Local Government (MINALOC), supported by a number of complementary initiatives delivered by other ministries.

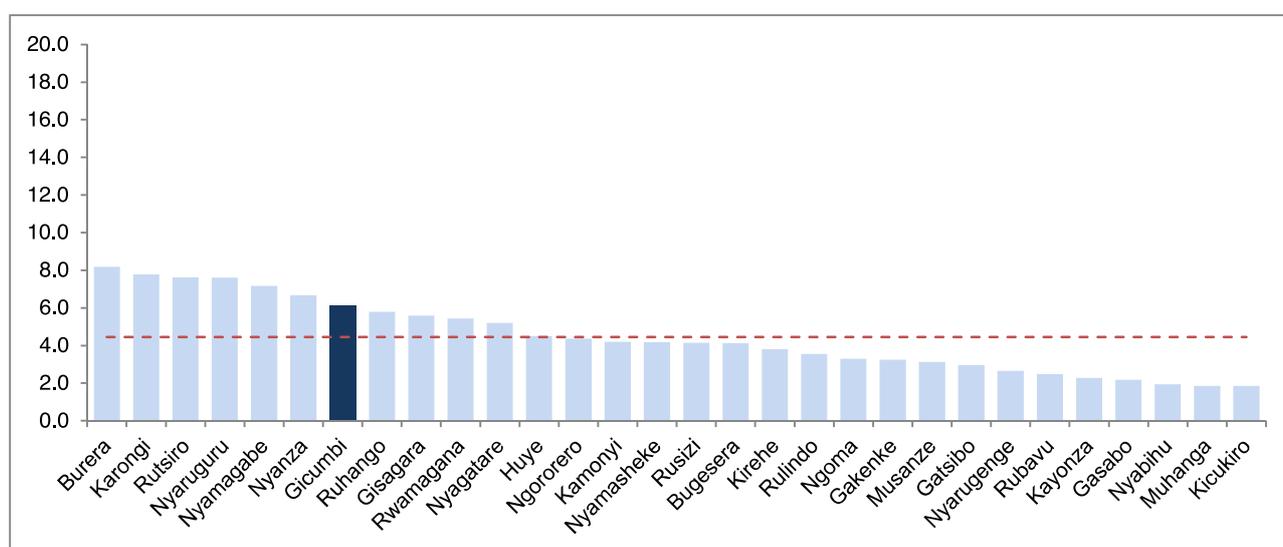

The main programme run by MINALOC, and a flagship of the EDPRS 2008–2012, is the Vision 2020 Umurenge Programme (VUP) which contains three pillars: VUP public works, VUP direct support, and VUP financial services. The three pillars represent public works for the poor who are able to work, cash transfers for very poor households without labour capacity, and financial services such as the Ubudehe Credit Scheme.

In addition to VUP, MINALOC runs two other social assistance schemes: the Genocide Survivors Support and Assistance Fund, and the Rwanda Demobilisation and Reintegration Commission. Outside these core programmes are the social protection initiatives run by other ministries such as the Girinka 'One Cow per Poor Family' programme of the Ministry of Agriculture, the free basic education programme, subsidised subscriptions for mutual health insurance, and in-kind social care services run by the Ministry of Gender and Family Promotion. Moreover, Rwanda has a limited system of contributory social protection mechanisms that enable people in formal employment to access medical care and an old-age pension.

8.1 People with disabilities

Figure 8.1 presents the percentage distribution of persons with a major disability, by district. It shows that Gicumbi district ranks seventh among all districts with a high percentage of people with a major disability (6.2%). This percentage is above the national average of 4.5%. The district with the most people with a major disability is Burera, with 8.2%.

Figure 8.1 Percentage of persons with major disability, by district

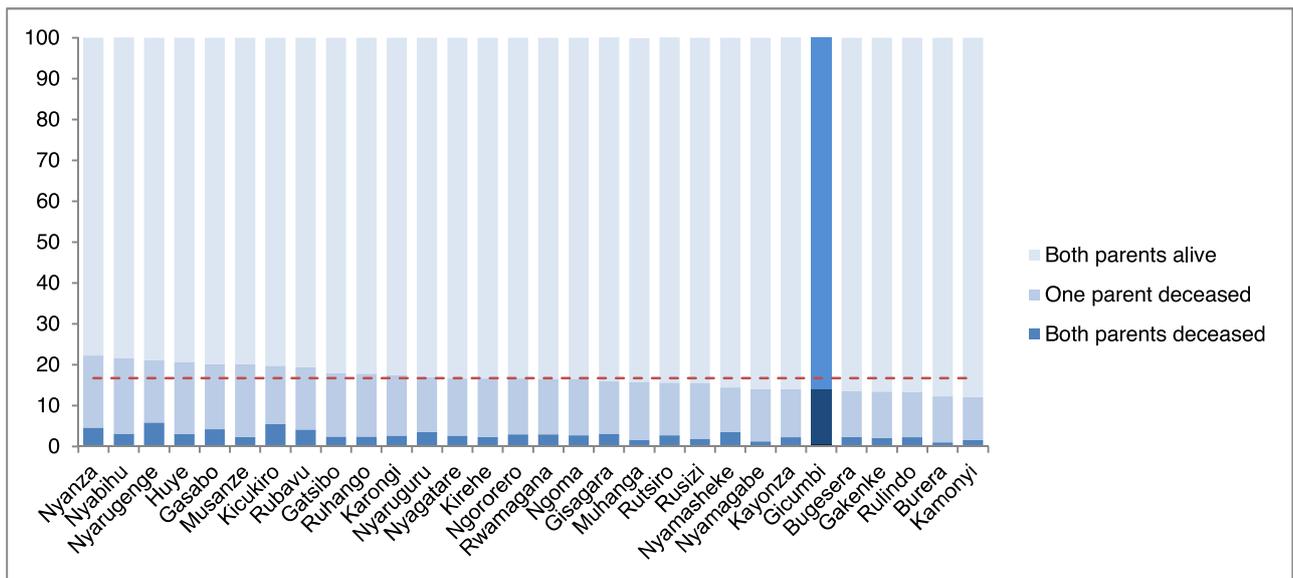

Source: EICV3. Note: Horizontal line represents national average.

8.2 Orphans

Figure 8.2 below presents the percentage distribution of orphans – including those with one parent or both parents deceased – among the population aged 0–20, by district. It shows that Gicumbi district has 0.7% of orphans with both parents deceased and 13.2% of orphans with one parent deceased. Both these indicators are below the national level averages, which are 2.7% and 14% respectively.

Figure 8.2 Percentage of orphans (one parent or both parents) among population aged 0–20, by district

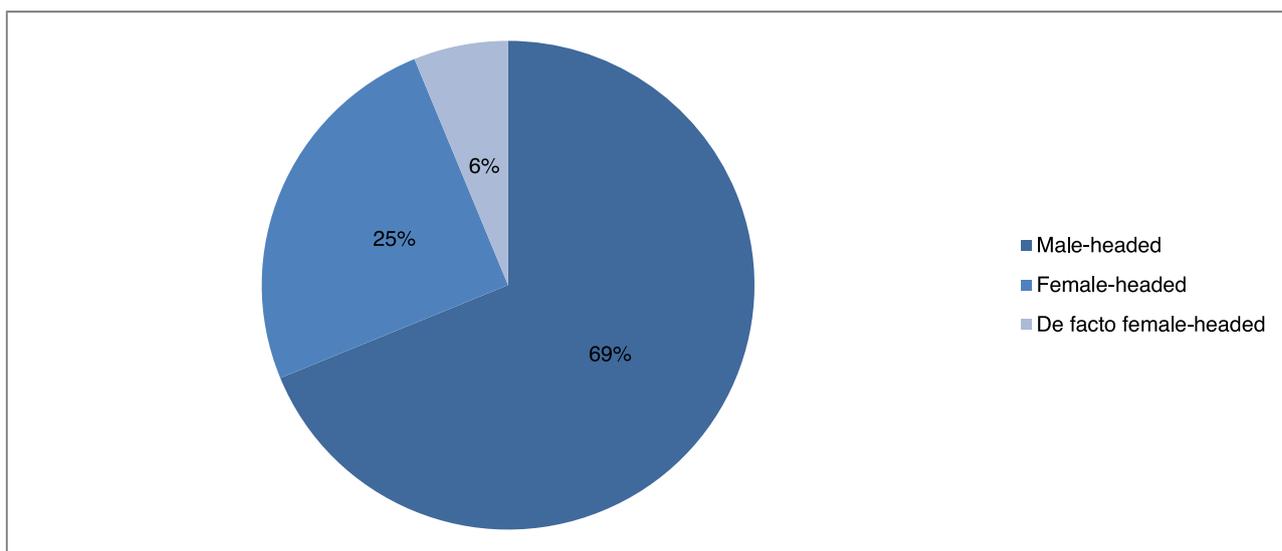

Source: EICV3. Note: Based on all persons aged 0–20. Districts ordered by percentage of orphans (one or both parents). Horizontal line represents national average of orphans (one or both parents).

9 Some gender aspects

The resident population of Gicumbi district is 572,000. 274,000 are male and 298,000 female, meaning females outnumber males by 24,000 people.

Figure 9.1 below presents the percentage of heads of household by gender in Gicumbi district. It shows that 25% of households in Gicumbi district are headed by females and 6% are 'de facto female-headed households', i.e. those headed by females in the absence of a male head.

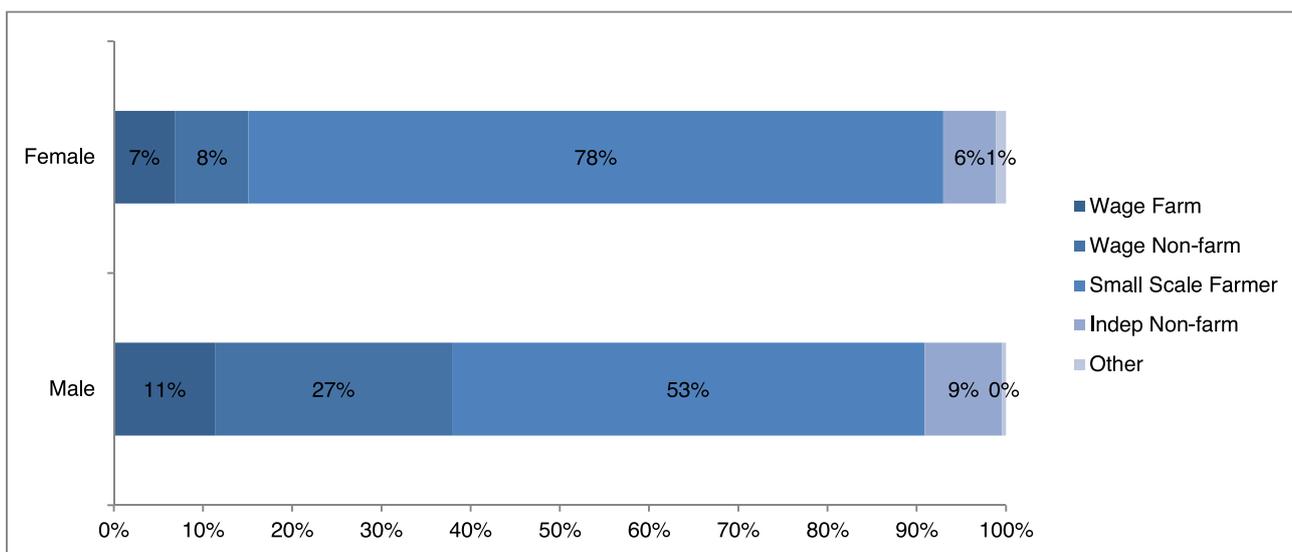

Figure 9.1 Sex of heads of household in Gicumbi

Source: EICV3. Note: In addition to the households who reported the household head as female, other households were headed by females in the absence of a male head. We call these households 'de facto female-headed households'. These households were temporarily headed by females whose husbands had been away for long periods of time.

Figure 9.2 shows the percentage distribution of employment by gender in Gicumbi district. It shows that the majority of females in Gicumbi district are small-scale farm workers (78%), with 8% wage farm workers. The majority of males are also involved in small-scale farm work (53%), wage non-farm work (7%); 11% are involved in wage farm and 9% in independent non-farm.

Figure 9.2 Employment type by sex in Gicumbi

Source: EICV3. Note: Based on all working people aged 16 and above.

10 Conclusions for Gicumbi

The percentage of the poor in Gicumbi is 49.3%, which is above the national average of 45%. The percentage of the extreme poor is 33.3%, which is the highest in Northern Province.

The percentage of households in Gicumbi district with access to an improved drinking water source is 89.4%, which is above the EDPRS target of having 85% of the population with access to an improved water source by 2012. All the other districts in the Northern Province are below the national target.

The percentage of households that uses electricity as their main source of lighting in Gicumbi district is only 9% which is below the urban and national averages. However, Gicumbi ranks second on this indicator in the Northern Province.

Gicumbi district is among the districts with few households owning a mobile phone. Gicumbi district has 38.3% of households owning a mobile phone and is ranked last within the Northern Province. In urban areas, 71.5% of households own a mobile phone while in rural areas the figure is 40.6%, and 45.2% country-wide. Therefore Gicumbi ranks below the national, urban and rural averages.

The mean walking distance to a primary school in Gicumbi district is 37.1 minutes, which is above the mean distance in rural areas of 28.6 minutes. In urban areas, the mean walking distance to a primary school is 19.4 minutes while it is 27.2 minutes country-wide.

The industry of usual main jobs in Gicumbi district is mainly agriculture with 76% of the working population aged 16 year and above involved in this. Agriculture is the main source of income for 49% of households.

Gicumbi is among the districts with a high percentage of households raising livestock (77.8%).

The literacy rate among the population aged 15 and above in Gicumbi district is 70.5%, which is equal to the national average of 69.7%. The NAR in primary school for Gicumbi district is 97.9%, above the national average of 91.7%, the urban (93.3%) and rural (91.5%) area average and the average for Kigali City (94.1%). Gicumbi district has the highest NAR in Northern Province.

The survey results show that 7.2% of the population of Gicumbi district have used a computer before and would feel confident using one again. Gicumbi ranks first in the Northern Province and fourth at national level on this indicator.
