

REPUBLIC OF RWANDA

NATIONAL INSTITUTE OF STATISTICS OF RWANDA

EICV3 DISTRICT PROFILE

West - Karongi

Foreword

The 2010/11 Integrated Household Living Conditions Survey (EICV3) is the third in the series of surveys which started in 2000/01 and is designed to monitor poverty and living conditions. The survey fieldwork commenced in November 2010 and continued for one full year. In 2010/11, for the first time the achieved sample size of 14,308 households in the EICV3 was sufficient to provide estimates which are reliable at the level of the district.

To date, twelve publications have been issued by the National Institute of Statistics Rwanda (NISR) using EICV3 data:

- A report with an overview of main indicators;
- A poverty profile;
- A series of ten thematic reports, each exploring in depth a theme from the Economic Development and Poverty Reduction Strategy (EDPRS). The ten reports in this series are:

(i) Economic Activity; (ii) Utilities and Amenities (water/sanitation/energy/housing/-transport/ Information and Communication Technology (ICT)); (iii) Social Protection; (iv) Environment and Natural Resources; (v) Consumption; (vi) Gender; (vii) Youth; (viii) Education, (ix) Agriculture; and (x) Income.

This district profile is one of 30 further documents issued by the NISR. Based on EICV3 data, each district profile discusses the living conditions in one of the 30 districts of Rwanda.

Yusuf MURANGWA

Director General

NOTES

Acknowledgements

This report has been prepared with participation of a large number of individuals and organizations. We would like to express our gratitude to all of them.

We would like to express our sincere appreciation to the partner Ministries, Institutions, agencies and development partners for their respective great support and inputs throughout the process of writing and publishing this report.

We also express our profound gratitude to the team of Oxford Policy Management (OPM), and in particular to Mary Strode and her colleagues. Their technical assistance contributed to the success of this report.

We also thank the technical staff from National Institute of Statistics of Rwanda (NISR) for their unfailing participation in all activities of the survey data analysis, which was coordinated by HABIMANA Dominique and his assistants, APPEL Derek and KARANGWA John.

We appreciate the valuable support provided by administrative and financial departments of the NISR. Their interventions allowed this survey data analysis to be carried out smoothly and under good conditions.

1 Introduction

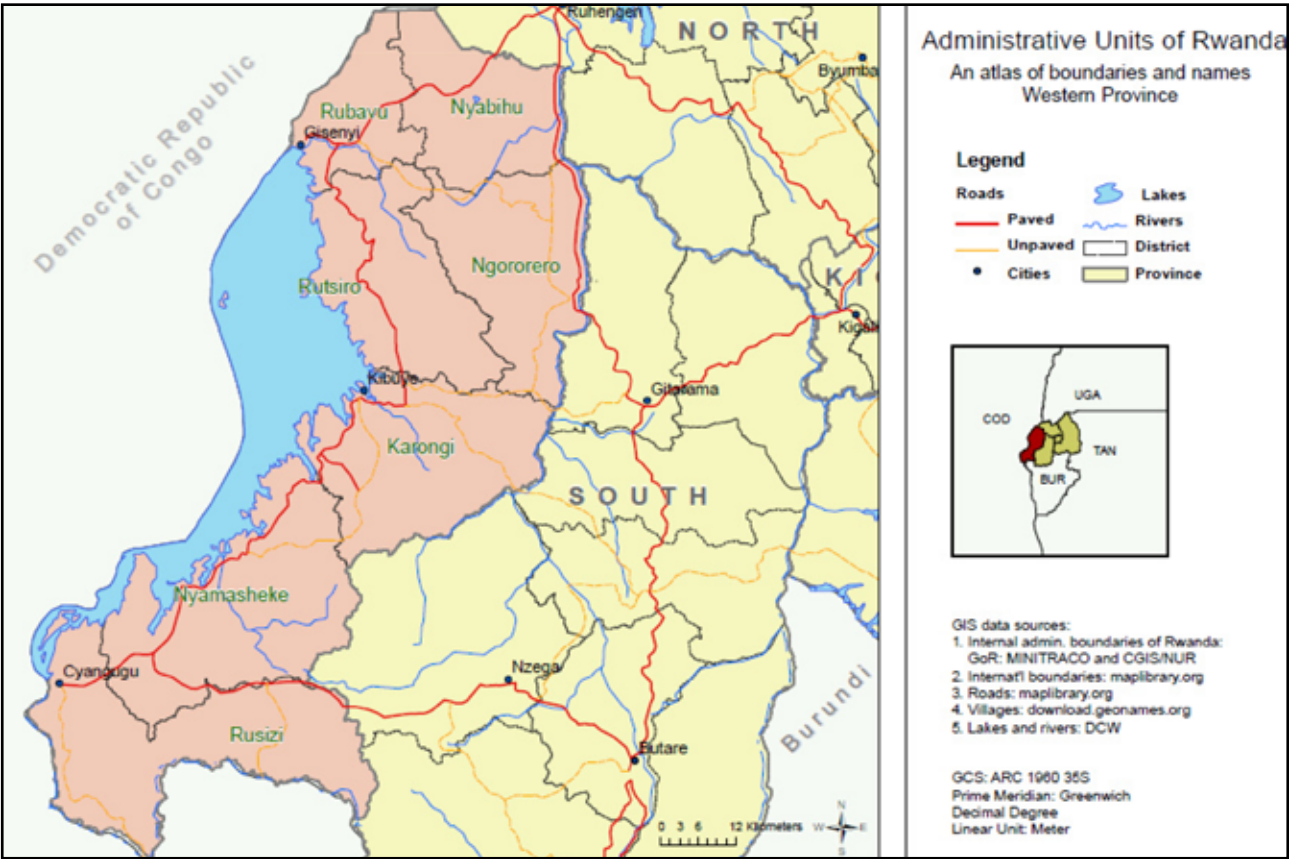

On 7 February 2012, the President of Rwanda officially launched the design phase of the EDPRS2. A key input into the development of the EDPRS2 is the evidence collected through the third Integrated Household Living Conditions Survey (EICV3), fieldwork for which was carried out by the NISR between October 2010 and November 2011. In 2010-11, for the first time the achieved sample size of 14,308 households in the EICV was sufficient to provide estimates which are reliable at the level of the district. This district profile presents the key findings from EICV3 for the district of Karongi in the Western Province.¹

This profile contains key baseline indicators for the district which are structured into eight sections as follows:

1. Demographic characteristics;
2. Poverty indicators;
3. Standards of living, which includes water and sanitation, housing and energy, ownership of selected durables, distance to facilities/services, and use of financial services;
4. Economic activities and income sources;
5. Agriculture, which includes land, farming practices, commercialisation of crop production, and live-stock;
6. Education indicators covering schooling and literacy, primary and secondary education, and ICT education;
7. Vulnerable groups, including persons with major disabilities and orphans; and
8. Gender issues including female heads of household and employment type by sex.

1 District tables underlying all figures in this report are presented in the Annex.

Figure 1.1 Western Province

2 Demographics

The estimated total population of Karongi district as provided by EICV3 survey in 2010–2011 is 355,000, representing 14% of the total population of Western Province and 3% of the total population of Rwanda. Females comprise 54% of the population of Karongi district.

Figure 2.1 below clearly shows that the majority of the population of Karongi district is young, with 80% of the population aged less than 40 years old. About 54% of the population are aged 19 years or younger. People aged 65 years and above make up 5% of the population.

Figure 2.1 **Distribution of population in Karongi by age groups and sex (000s)**

Source: EICV3.

Figure 2.2 below presents the ratio of females per 100 males by district. It shows that females outnumber males in Karongi district with 115 females per 100 males, which is above the national average of 111 females per 100 males.

Figure 2.2 **Number of females per 100 males, by district**

Source: EICV3. Note: Horizontal line represents national average.

As shown in Figure 2.3 below, the average size of the household in Karongi district is below the national average household size. It is about five persons per household (4.6).

Figure 2.3 **Mean household size, by district**

Source: EICV3. Note: Horizontal line represents national average.

3 Poverty

The poverty line defines a level of household consumption per adult below which a household is deemed to be poor. The poverty line used here is set with reference to a minimum food consumption basket, which was judged to offer the required number of calories required for a Rwandan who was likely to be involved in physically demanding work, along with an allowance for non-food consumption. An extreme poverty line was also set as the cost of buying the food consumption basket if nothing was spent on non-food at all; this line corresponds to RWF 83,000 and the poverty line corresponds to RWF 118,000.

Figure 3.1 below presents the percentage of the population classified into extremely poor, poor and non-poor. It shows that Karongi district is ranked third for percentage of extreme-poor and poor² population categories. In Karongi district, 62% of the population is poor (including extreme-poor).

Only about 38% of the population in Karongi district is identified as non-poor; 22% is poor (excluding extreme-poor) and 40% extreme-poor.

The poverty indicators for Karongi district are far higher than the average for the Western Province, where 48.4% of the population are categorised as poor (including extreme poor). Within Western Province, Karongi is the second poorest district after Nyamasheke district.

Figure 3.1 Percentage of population identified as poor and extremely poor, by district

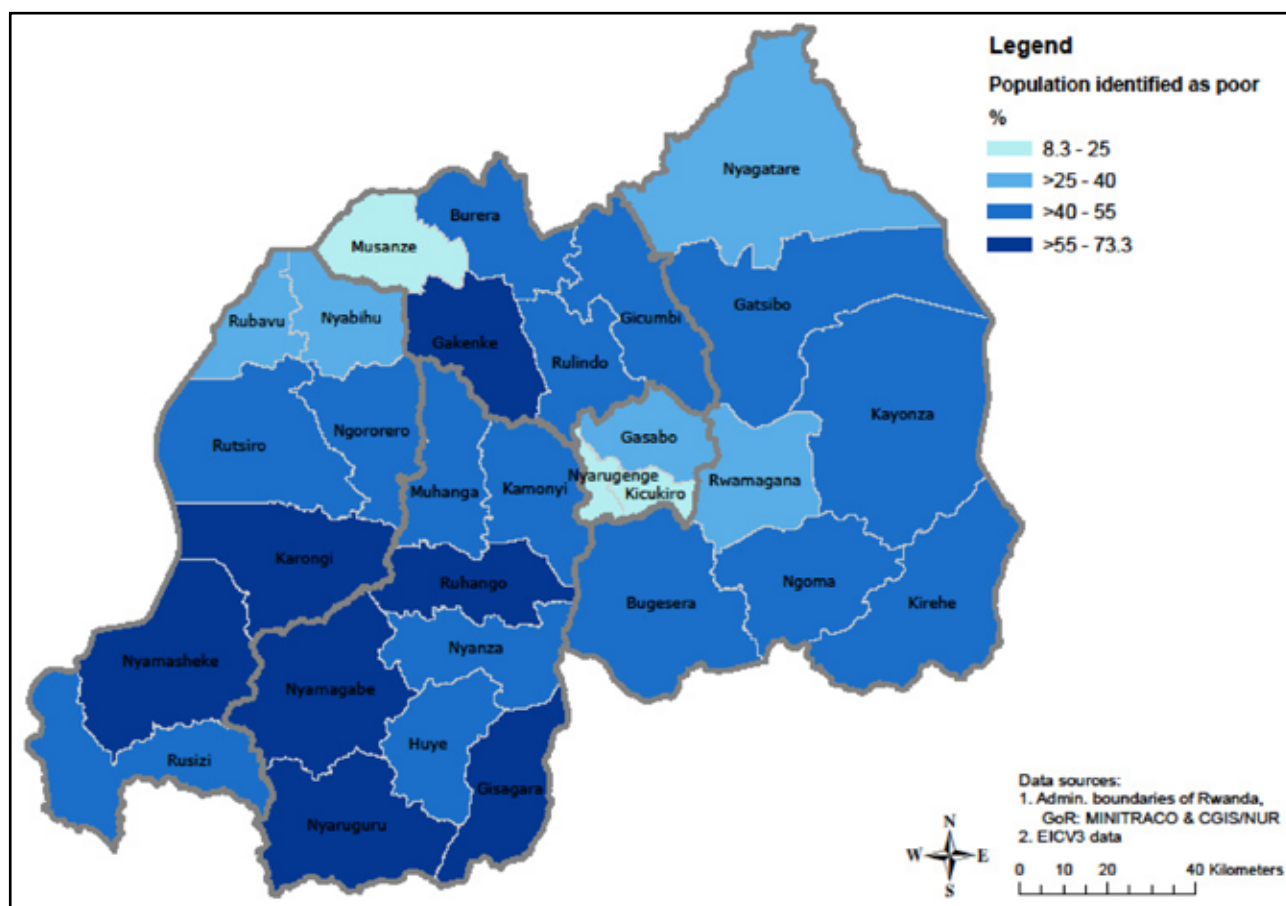

Source: EICV3. Note: Horizontal lines represent national averages of poverty and extreme poverty. Districts sorted by overall poverty level.

2 The poor category excludes extremely-poor.

The map presented in Figure 3.2 below also shows that Karongi district is among the districts with a high percentage of population identified as poor, ranging between 55% and 73.3%.

The following seven districts are included in this poorest category: Nyamagabe (73.3%), Nyamasheke (63.4%), Karongi (61.7%), Nyaruguru (61.6%), Ruhango (60.4%), Gisagara (59.4%), and Gakenke (56.6%).

Figure 3.2 **Map: Percentage of population identified as poor, by district**

4 Standard of living (utilities and amenities)

This section focuses on water and sanitation, energy and housing, ownership of selected durables, distance to facilities/services, and use of financial services. The Vision 2020, Rwanda's vision of its future development, identified the utilities and amenities discussed in this section as all being crucial requirements for Rwanda's social and economic development.

4.1 Water and sanitation

Improved drinking water source include protected springs, public standpipes, water piped into dwelling/yard, boreholes, protected wells and rainwater collection, as defined by the World Health Organisation (WHO).

Considering the above definition, the survey results show that 75% of households in Karongi district use an improved drinking water source.

Figure 4.1 shows that the majority of households use a protected spring (52%), followed by a public standpipe (13%). However, 25% of households in this district still use an unimproved drinking water source.

Karongi district has not yet achieved the EDPRS national target for the water and sanitation sector, which is to increase access to drinking water to 85% by 2012. It is lagging behind achieving the national target by around 10 percentage points.

Figure 4.1 Main source of drinking water (percentage of households) in Karongi

Source: EICV3. Improved sources presented in blue, unimproved in red.

The map presented in Figure 4.2 below shows that Karongi district is among the Western Province districts that have between 70% and 80% of households using an improved drinking water source. The other three districts are Nyabihu, Nyamasheke and Rusizi. Only Rubavu district in this province has achieved, and even surpassed, the EDPRS national target for the water and sanitation sector, with 93.4%

Figure 4.2 **Map: Percentage of households using improved drinking water source, by district**

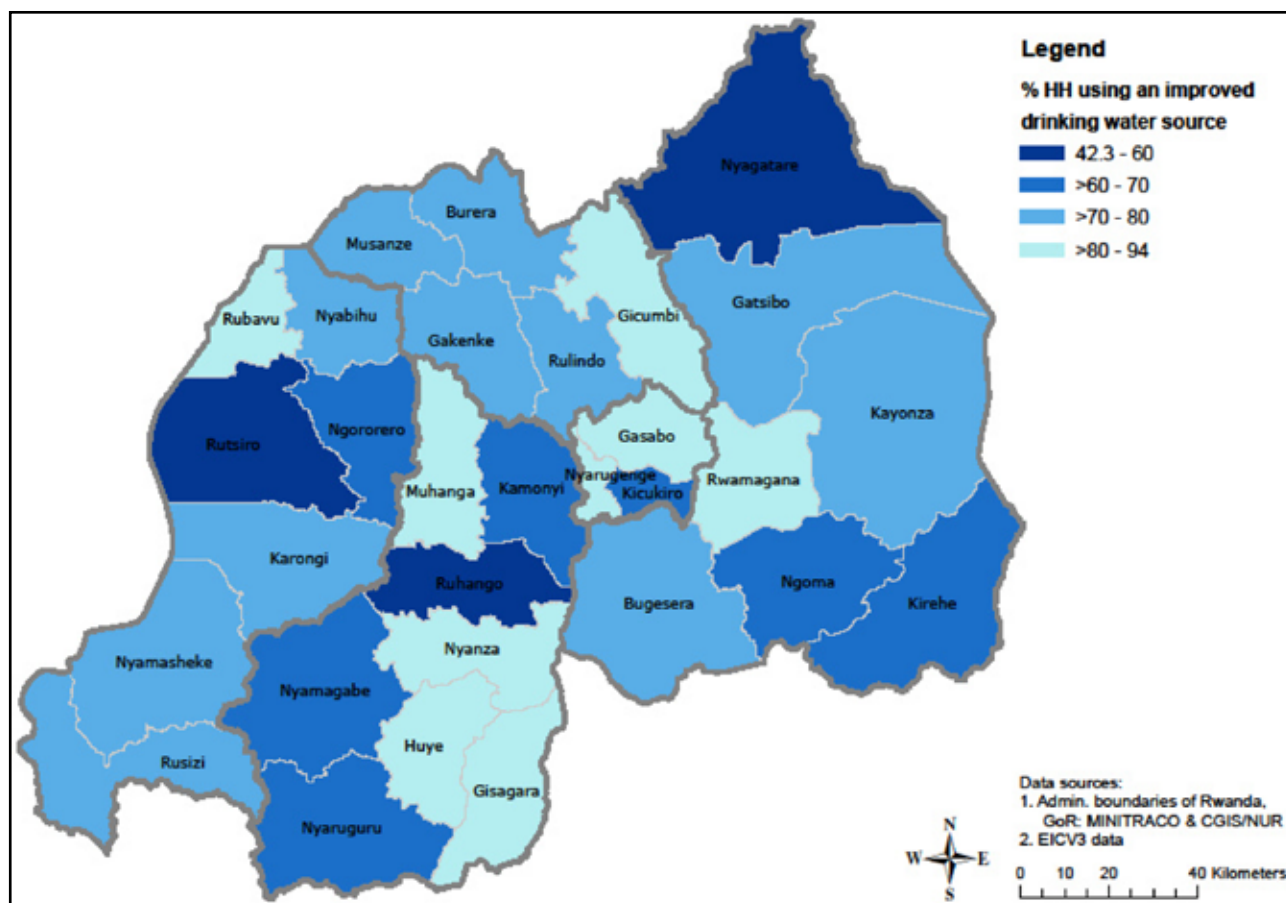

Figure 4.3 shows that, on average, only 47% of households in Karongi district are within 15 minutes' walking distance to an improved water source. Among the Western Province districts, Karongi ranks third poorest for the percentage of households within 15 minutes' walking distance of an improved water source, after Rutsiro (30%) and Ngororero (36%).

The mean time to an improved water source in Karongi district is 14 minutes, which is the same as the national average (14.4 minutes).

Figure 4.3 Percentage of households within 15 minutes' walking distance to improved water source, by district

Source: EICV3. Note: Horizontal line represents national average.

The WHO/UNICEF Joint Monitoring Programme defines an 'improved sanitation facility' as flush toilets and pit latrines with a floor slab.³

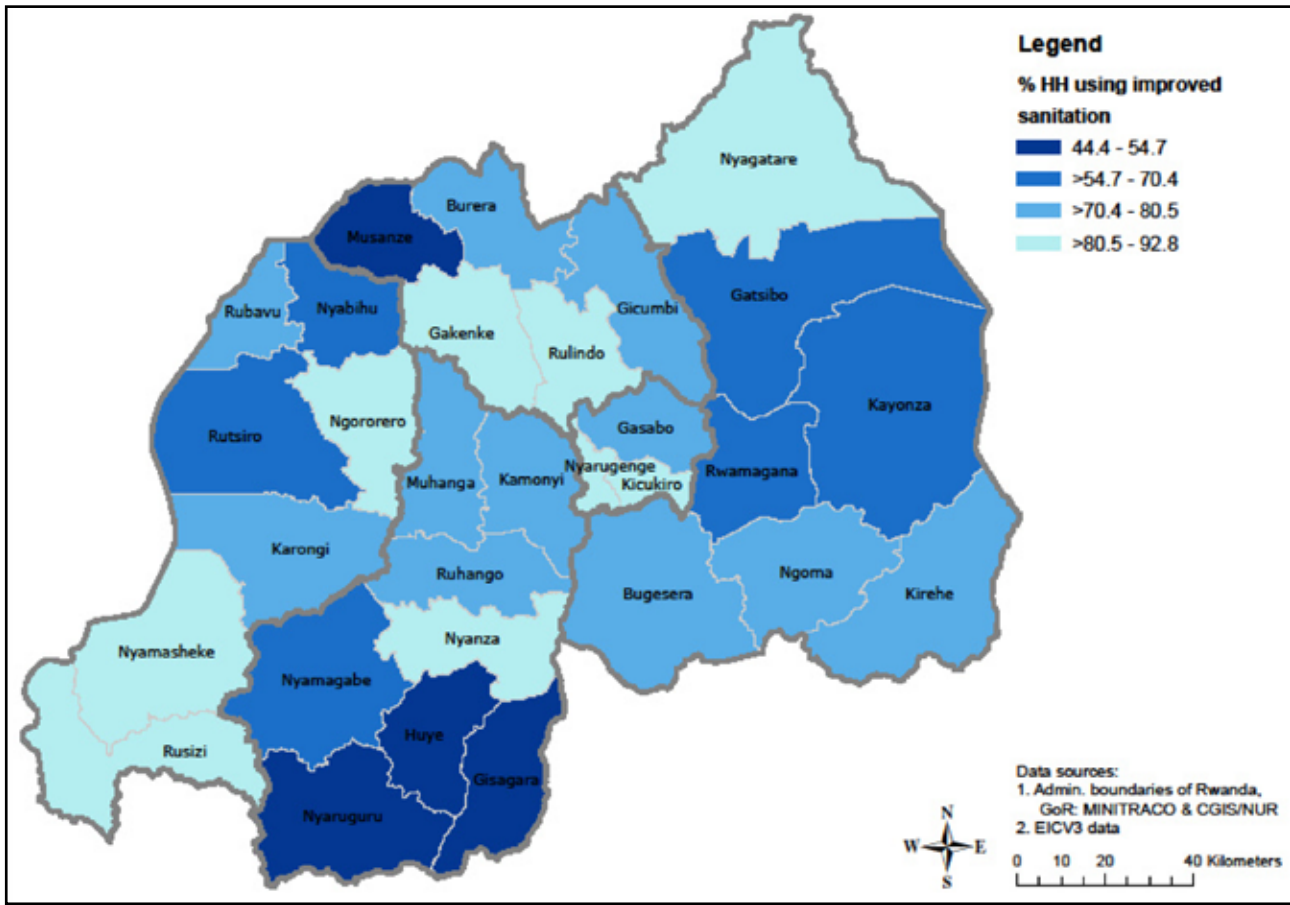

The map presented in Figure 4.4 presents the percentage of households with improved sanitation facilities by district. It shows that Karongi district has 76.6% of households with access to improved sanitation facilities, which is above the national average (74.4%).

The EDPRS target on sanitation is to have nationally 65% of the total population with hygienic sanitation by 2012. It is clear that Karongi district has achieved and even largely surpassed this target by about 12 percentage points.

Among the Western Province districts, Karongi is ranked third poorest in terms of the percentage of households using improved sanitation, after Rutsiro (63%) and Nyabihu (70%). Ngororero district is ranked first in this province with 90% of households using improved sanitation.

Figure 4.4

4.2 Housing and energy

This section describes the housing and energy characteristics of the household. The habitat sub-sector has the main objective of contributing to sustainable economic growth and the wellbeing of the Rwandan population by improving habitat and urbanism infrastructure. The sub-sector engages in a programme to modernise cities in Rwanda, especially in the habitat areas, with interventions to curb the proliferation of unplanned housing and to improve living standards in irregular neighbourhoods.⁴

The guiding documents of the sub-sector are the Vision 2020 and the EDPRS. As summarised in the sub-sector's EDPRS Self-Assessment Report (2008–2011), the objectives of the Vision 2020 with regard to human settlement are summarised as follows:

- Having urbanisation master plans and particular development plans for towns;
- Using urban land according to adopted plans; and
- Developing basic infrastructure in urban areas and other rural development zones.

The objectives of the EDPRS with regard to human settlement and management of public property are worded as follows:

- Planning and development of improved human facilities in both rural and urban areas;
- Sustainable and rational use of land and environmental protection;
- Designing urban master plans
- Construction of regrouped settlements (*Imidugudu*);
- 10,000 ha of marked-out and improved plots;
- Restructuring of seven districts where the population suffer from bad living conditions; and
- Accommodating public facilities into comfortable buildings in accordance with the need for rapid and quality services.

In order to achieve these objectives, the sector has stipulated specific sub-programmes to be focused on:

- Real estate promotion, construction and maintenance of public buildings;
- Registration of land plots with all necessary statutory requirements;
- *Imidugudu* promotion and development of master plans;
- Support for housing financing;
- Establishment of main planning, urban architectural designs and simplified plans of 30 municipalities (district towns);
- Improvement of informal/peripheral neighbourhoods;

4 Introduction to the habitat and urbanism sub-sector, MINIFRA (<http://www.mininfra.gov.rw/index.php?id=26>)

- Sensitisation on the standards of construction and urbanism as well as the protection of the urban environment; and
- Promotion of low cost and indigenous good materials and techniques for home building.

Energy is regarded a key requirement for the development of the national economy and essential for the development of industries and businesses, as well as to the delivery of high-quality services from social institutions such as health facilities, schools and administrative offices.

The EDPRS energy sector objectives are increasing access to energy, a sustainable tariff structure, diversification of energy resources, and security and strengthening of institutional framework and institutional capacity. Two main targets and indicators related to electricity generation capacity and numbers of electricity connections were defined for the period of the EDPRS.⁵

4.2.1 Dwelling characteristics

Figure 4.5 describes the construction material used for flooring by district. It shows that 91.4% of households in Karongi district use beaten earth as their flooring material. Only 6.4% of households have a cement floor, which is well below the national level of 17%.

When compared with other Western Province districts, Karongi is ranked third lowest for percentage of households using cement floor, after Rutsiro (4%) and Ngororero (4.7%).

Figure 4.5 Percentage of households with cement floor, by district

Source: EICV3. Note: Horizontal line represents national average.

5 Energy sector EDPRS Self-Assessment, EWSA, MININFRA, November 2011.

Figure 4.6 below presents the percentage of households with mud-covered tree trunks as their main wall material by district. The main wall material of dwellings were classified as follows: mud bricks, mud bricks covered with cement, tree trunks with mud, tree trunks with mud and cement, oven-fired brick, and other unspecified material.

In Karongi district, 15% of households use mud-covered tree trunks as their wall and 77% mud bricks. At national level, 35.2% of households use mud-covered tree trunks as their wall material; the figure is 38.3% in rural areas.

Figure 4.6 Percentage of households with mud-covered tree trunks as wall material, by district

Source: EICV3. Note: Horizontal line represents national average.

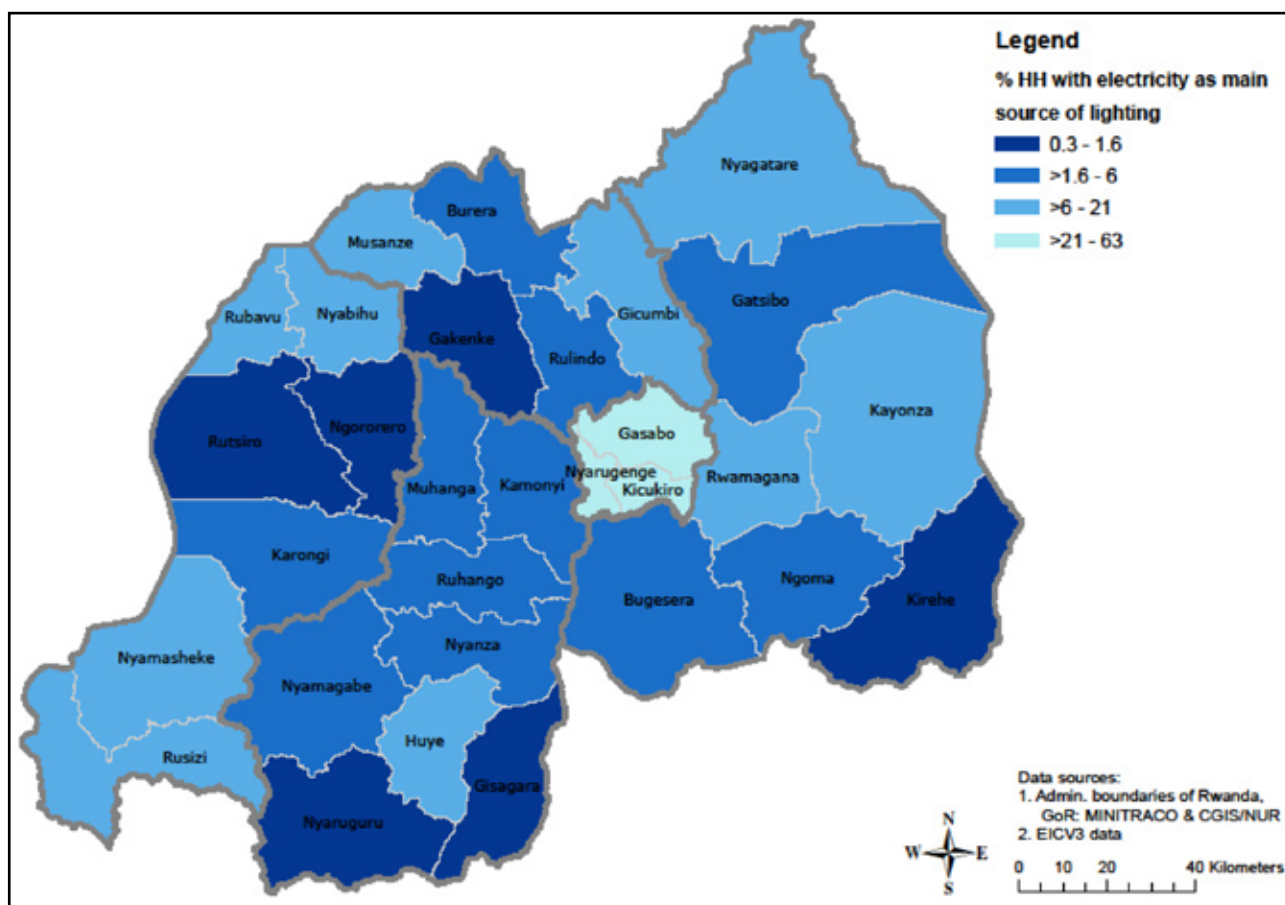

4.2.2 Energy characteristics

The primary sources of energy used for lighting by households were categorised as follows: electricity, oil lamp, firewood, candle, lantern, battery, and other unspecified sources.

The map presented in Figure 4.7 presents the distribution of households using electricity as the main source of lighting by district. In Karongi district, only 2.8% of households use electricity as their main source of lighting, ranking the district third worst in Western Province after Rutsiro (0.4%) and Ngororero (0.4%).

On average, the urban areas have 46.1% of households using electricity as the main source of lighting, compared with only 4.8% in rural areas and 10.8% at national level.

Figure 4.7 **Map: Percentage of households with electricity as main source of lighting, by district**

4.3 Ownership of selected durables

The EICV3 provides information on ownership of selected ICT devices by district and categorises them into mobile phone, landline phone, computer, radio, TV set, and video/DVD player.

When the Vision 2020 was elaborated in 1998/99, the national consultative process stated: ‘Telecommunication coverage in Rwanda is very low. The communication policy will take advantage of the small size of the country, its high population density and the single local language to attract investors so that the sector can be liberalised. By 2020, Rwanda projects to have internet access at all administrative levels, for all secondary schools and for a large number of primary schools. Telephone services will be widespread in rural areas’.

Ever since, the ICT sector has been regarded a key element of Rwanda’s development process. It is expected to create jobs, facilitate general economy development, and ensure that Rwanda will transform into a globally competitive, information-rich knowledge-based economy.⁶

In line with these aspirations, the EDPRS/Common Performance Assessment Framework defines two sector-relevant progress indicators: ICT penetration in terms of voice (i.e. phone) and data (i.e. internet) services.

⁶ ICT Sector EDPRS Self-Assessment Report, Ministry of Information and Communications Technology, December 2011.

Figure 4.8 below describes the percentage of households owning a mobile phone by district. It shows that 31% of households in Karongi district own a mobile phone; this ranks the district worst among all districts of Western Province and fourth worst at national level. It also is below the national average as well as the rural area average.

On average 71.5% of households in urban areas own a mobile phone, while in rural areas it is 40.6% and 45.2% country-wide.

Figure 4.8 Percentage of households owning mobile phone, by district

Source: EICV3.

Figure 4.9 below describes the percentage of households owning a radio by district. EICV3 results shows that 48% of households in Karongi district own a radio. The national average of households owning a radio is 60.3%, while in urban areas it is 57.7% and in rural areas 60.7%.

Karongi is below the national average percentage for households owning a radio and is ranked second last among all districts in the country (Figure 4.9) after Rubavu. The first ranked district is Nyagatare with 69.5% of households owning a radio.

Figure 4.9 Percentage of households owning radio set, by district

Source: EICV3. Note: Horizontal line represents national average.

4.4 Distance to facilities/services

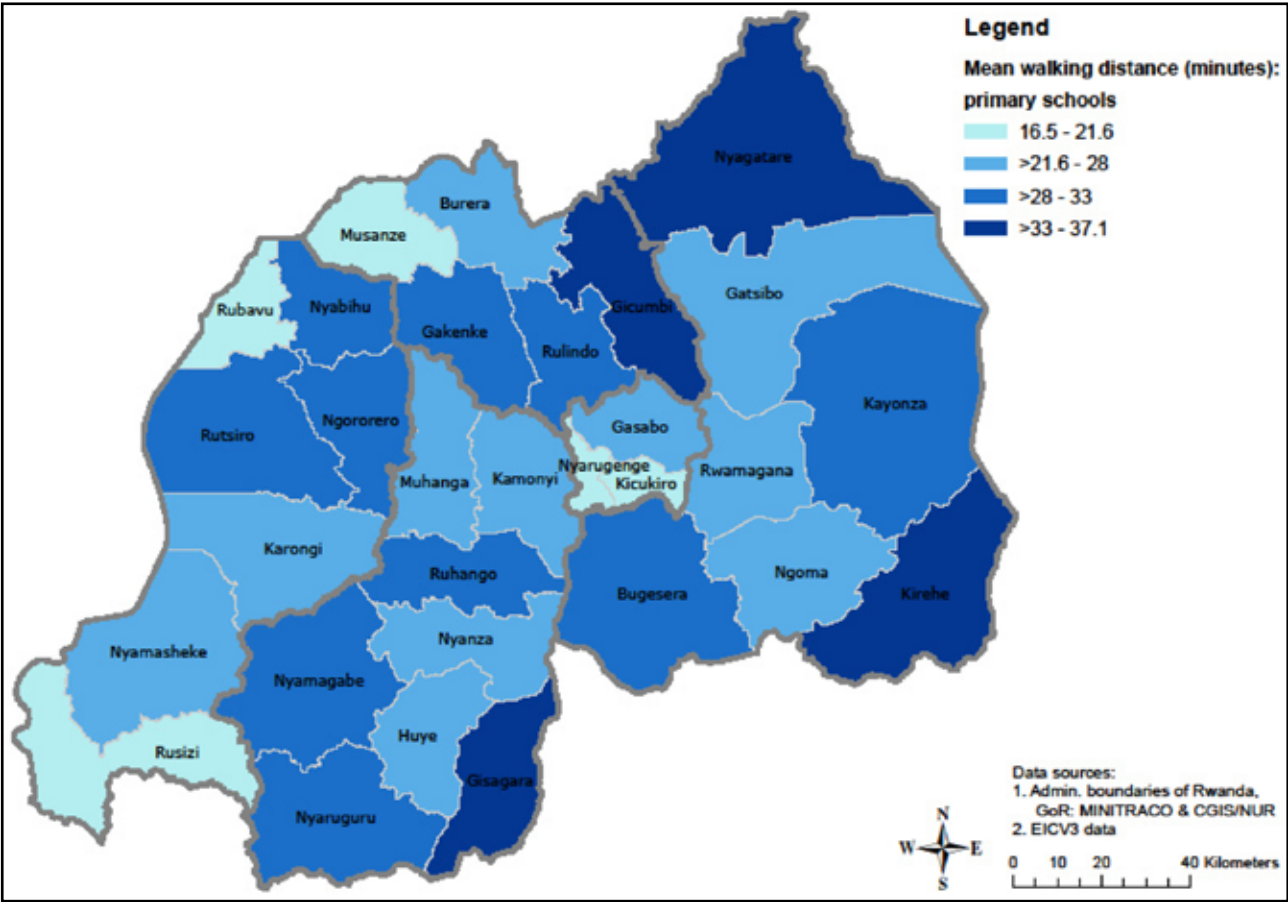

Walking distance to basic services can be considered an indicator of both provision and coverage of such services and the remoteness of households' dwellings. The basic services were categorised into Food Market/ Shop, Primary School, Secondary School, and Health Centre.

The map presented in Figure 4.10 shows the mean walking distance to primary school by district. It shows that Karongi is classified among the 11 districts with a mean walking distance to a primary school within the interval of 21.6-28 minutes.

The mean walking distance to a primary school in Karongi district is 24.6 minutes; 60% of households are between 30 and 59 minutes of a primary school.

The mean walking distance to a primary school is 28.6 minutes in rural areas, while it is 27.2 minutes at national level.

Figure 4.10 **Map: Mean walking distance to basic services (in minutes): Primary school, by district**

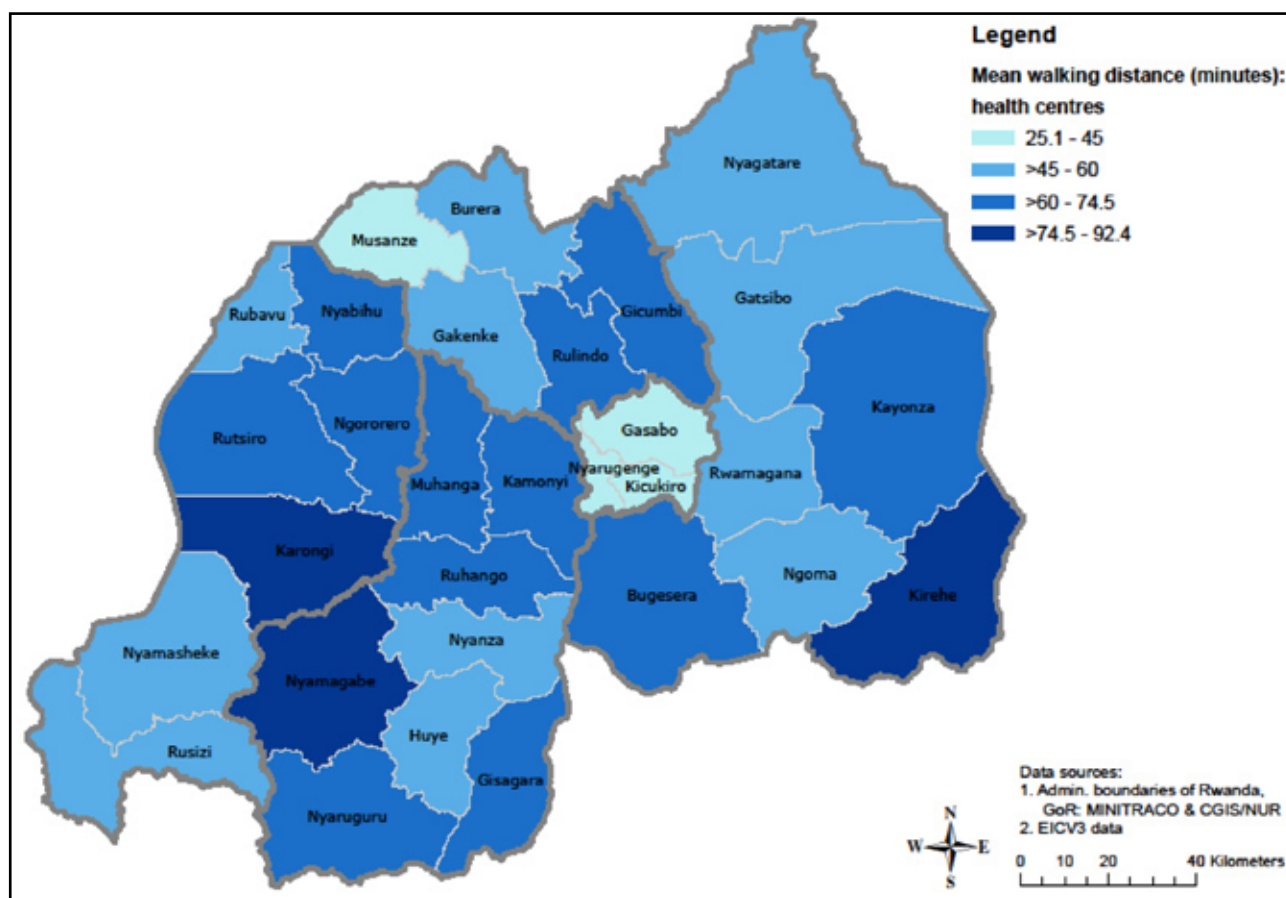

The map presented in Figure 4.11 below shows the mean walking distance to a health centre by district. The mean walking distance to a health centre in Karongi district is 77.7 minutes; only 34% of households walk for under an hour on average to reach a health centre.

The mean walking distance to a health centre is 35 minutes in urban areas and 64.4 minutes in rural areas, while it is one hour country-wide.

When compared to Western Province districts, Karongi district health centres are further from household dwellings by about 10 minutes on average than other districts.

Figure 4.11 **Map: Mean walking distance to basic services (in minutes): Health centre, by district**

4.5 Use of financial services

Figure 4.12 presents the percentage of households with at least one saving account by district. It shows that 31.6% of households in Karongi district have at least one saving account, ranking it seventh last of all districts in Rwanda. This is below the national average of 39.4% of households with at least one saving account.

At the sub-national level, 60.4% of urban households have at least one saving account and 35.8% in rural areas. Apart from Kigali City, which has the highest percentage of households with at least one saving account, the predominantly rural provinces vary between 33.8% and 40.1%.

Considering individuals aged 18 and above, the EICV3 shows that 21% of people in Rwanda have at least one savings account, with 37% for Kigali City residents as compared to 17% to 20% in the remaining provinces.

Figure 4.12 Percentage of households with at least one savings account, by district

Source: EICV3. Note: Horizontal line represents national average.

5 Economic activity and income sources

5.1 Economic activity

This section refers to the population aged 16 years and above, as 16 years is the legal working age in Rwanda. Employment questions were asked of all individuals aged six years and above but only data for those aged 16 years and above appear in this section. It should be noted that the survey collected data about all the jobs people did over a 12-month period, as well as about those they did in the last seven days. We refer to the former as usual economic activity and to the latter as current economic activity.

The formal International Labour Organisation (ILO) definition of unemployment is those people who work under one hour per week but are actively seeking work and able to start immediately. In many low-income countries that do not have social safety nets, formal unemployment is quite low because it is rare to be able to afford to do no work at all. We present here statistics for formal unemployment and an estimate for the small number of discouraged workers. We also look at broader measures such as underemployment, which consist of those working part time, but who would like to work more hours a week.

Figure 5.1 below presents the percentage distribution of usual employment, unemployment, and economic inactivity among persons aged 16 years and above by district.

In Karongi district, overall employment rate is 83% of the resident population aged 16 years and above; the unemployment rate is 0.4% and the economic inactivity rate is 16.4%. As shown in Figure 5.1 below, the Karongi district employment rate is slightly below the national average. Among Western Province districts, Karongi is ranked third last after Rusizi (77.9%) and Rubavu (79.6%).

Karongi has the third city in Western Province after Rubavu and Rusizi and this may justify its relatively lower employment rate. The national average employment rate is 84%; the unemployment rate is 0.9% and the economic inactivity rate is 15%.

Figure 5.1 Economic activity: Employment, unemployment, and economic inactivity among persons aged 16 and above (usual), by district

Source: EICV3. Note: Based on all persons aged 16 and above. Horizontal line represents national average of employment rate.

Figure 5.2 presents employment types by the *usual main job* in Karongi district. It shows that most people aged 16 years and above in this district have *independent farmer* as their main job (74%). The second main job is *wage-farm* with 12%, followed by *wage non-farm* with 9%. Only 1% have *unpaid non-farm, other and non-identified* as their usual main job.

Karongi is ranked first with the percentage of population that usual main job is *independent farmer* among other Western Province districts.

Figure 5.2 **Employment types (usual main job) in Karongi**

Source: EICV3. Note: Based on all persons aged 16 and above usually working.

Figure 5.3 below presents the industry of usual main jobs in Karongi district. It shows that most of the population aged 16 and above have Agriculture as their main industry (86%), followed by Trade with 4%. All other industries are under 3%.

Figure 5.3 **Industry of usual main jobs in Karongi**

Source: EICV3. Note: Based on all persons aged 16 and above usually working.

Figure 5.4 below presents the percentage of underemployed people – meaning the percentage of working people that worked 35 hours or fewer in all their jobs in the previous seven days – by district. Taking all the jobs that people did in the seven days before the survey we can start to understand underemployment. People whose main job is a waged job work on average 45 hours per week in all of their jobs (though this type of job holder is the least likely to be involved in more than one job). Those who work in small businesses as owners work 36 hours a week. Those who work as independent farmers work just 24 hours per week in all jobs, and waged farm workers work just 29 hours. People working on farms are the most likely to be working in more than one job at a time.

Setting a definition of underemployment at 35 hours a week or fewer, two-thirds of Rwandese adults can be defined as underemployed. Those working in farm jobs are the most likely to be underemployed, although it should be noted that farm workers must spend more time on gathering fodder for animals, fetching water and firewood, and marketing produce, which is not here counted as economic activity.

In Karongi district, 69% of adult 16 years and above worked 35 hours or fewer in all their jobs in the seven days prior to the survey data collection and are therefore classified as underemployed.

Only Kigali City has a significant percentage of the population working more than 35 hours a week. This is related to the higher than average proportion of jobs in Kigali that are non-farm paid work.

Figure 5.4 Underemployment (percentage of working people that worked 35 hours or fewer in all their jobs in the previous seven days), by district

Source: EICV3. Note: Based on all adults aged 16 and above who worked in the previous seven days, and gave the numbers of hours worked in all their jobs. Horizontal line represents national average.

Figure 5.5 below describes the median number of hours spent in the last seven days on domestic duties by men and women by district. All persons were asked how many hours they spent on domestic duties. Fetching water, fodder and firewood are officially classed as economic activity according to the ILO.

The median number of hours spent on all domestic duties in the last seven days of the survey data collection in Karongi district, by all persons aged 16 and above, including working and non-working persons, is 23 hours, where males spent 13 hours and females 33 hours; all these figures are above the national average. The national median number of hours spent by females on all domestic duties is 26 hours while males spent nine hours, together making a national average of 19 hours.

Country-wide, Karongi is ranked second by number of hours spent by persons aged 16 and above, including working and non-working persons, on all domestic duties (following Rutsiro district, where the figure is 26 hours on average).

Figure 5.5 Median number of hours spent in last seven days on domestic duties by men and women, by district

Source: EICV3. Note: Domestic duties include foraging for firewood, fodder searching, water fetching, going to the market, cooking, and other household chores. Fetching water, fodder and firewood are officially classed as economic activity according to the ILO. Estimates based on all adults aged 16 and above (both working and non-working). Horizontal lines represent the national average of median hours spent on domestic duties by men (lower line) and women (upper line). Districts are ordered by the median number of hours spent on domestic duties by women.

5.2 Income sources

This section focuses on five main components of income: agricultural income, wage income, business income, rent income, and income from transfers.

- **Household agricultural income:** this component is first divided into agricultural income (income from land cultivation) and livestock income. Unless otherwise specified, this report sums the two components into one agricultural component. It includes revenues from sale of crops, processed crop products, livestock products and other agricultural products, own consumption of food and non-food products, and the revenues from renting out livestock and sale of small animals. The income aggregate deducts costs on crop inputs, inputs used for processing crop products, and expenditure on livestock (h) and the cost of renting land. Within the costs, the income aggregate includes the depreciation of land and agricultural equipment. The depreciation rate is equal to 0.2 per annum.
- **Wage income:** this includes cash and in-kind revenues received from farm and non-farm work. In-kind payments include food and other agricultural products, provision of house and other benefits received for the work.
- **Non-farm self-employment (business):** this includes income received net of labour and other inputs.
- **Income from rents:** this includes actual rents received from renting out livestock, agricultural equipment and land (rent and sharecropping) as well as imputed rental value of owner-occupied dwellings.
- **Transfers:** transfers include remittances received (cash and in-kind) and other private transfers. It also includes public transfers. Private transfers received from dowry and sales of assets and land are excluded.

All income values are in real terms, with the price index equal to 100 in January 2011. The price deflator used here to express values in real terms is the same one that was used in the poverty analysis. The price index is based on a general basket of goods including food and non-food items, thus implicitly assuming the income generated by a household is spent on this general basket of goods.

The EICV3 results shows that at the national level agriculture contributes the largest share of a household's income (46%), followed by wage income (25%), business income (i.e. self-employment), transfers, and rents.

Figure 5.6 below presents the household income shares in Karongi district. It shows that household income is driven by agriculture (51%), followed by wage income (21%) and public and private transfers (17%). The smallest contributor to household income in Karongi district is business income (5%).

Figure 5.6 **Household income shares in Karongi**

6 Agriculture

This section seeks to inform and support the development of the EDPRS2 with data from the EICV3 and focuses on the agriculture sector. It provides detailed insights into the living conditions of the Rwandan population with regard to agricultural production. Agriculture is the backbone of Rwanda's economy and the majority of households in Rwanda are currently engaged in some sort of crop or livestock production activity.

In recent years, the Government of Rwanda has implemented several ambitious programmes to increase the productivity of the agriculture sector. The motivation behind these actions is reflected in the Ministry of Agriculture's vision: 'Our Vision is to modernise Agriculture and Livestock to achieve food security. One of the key pillars of this vision is the transformation of Agriculture from subsistence to a productive high-value, market-oriented farming that is environmentally friendly and has an impact on other sectors of the economy.'

This section explores a wealth of evidence on agricultural production collected through the EICV3.

6.1 Land

One of the major inputs in agricultural production is land. Rwanda is a small country with total arable land of about 1.4 million hectares.⁷

Given a growing population combined with strong reliance on agriculture, it is clear that land is one of the scarcest resources in Rwanda. The EICV collects detailed data on land use and agricultural activities of Rwandan households. It is however important to note that the EICV is not a specialised agricultural survey.

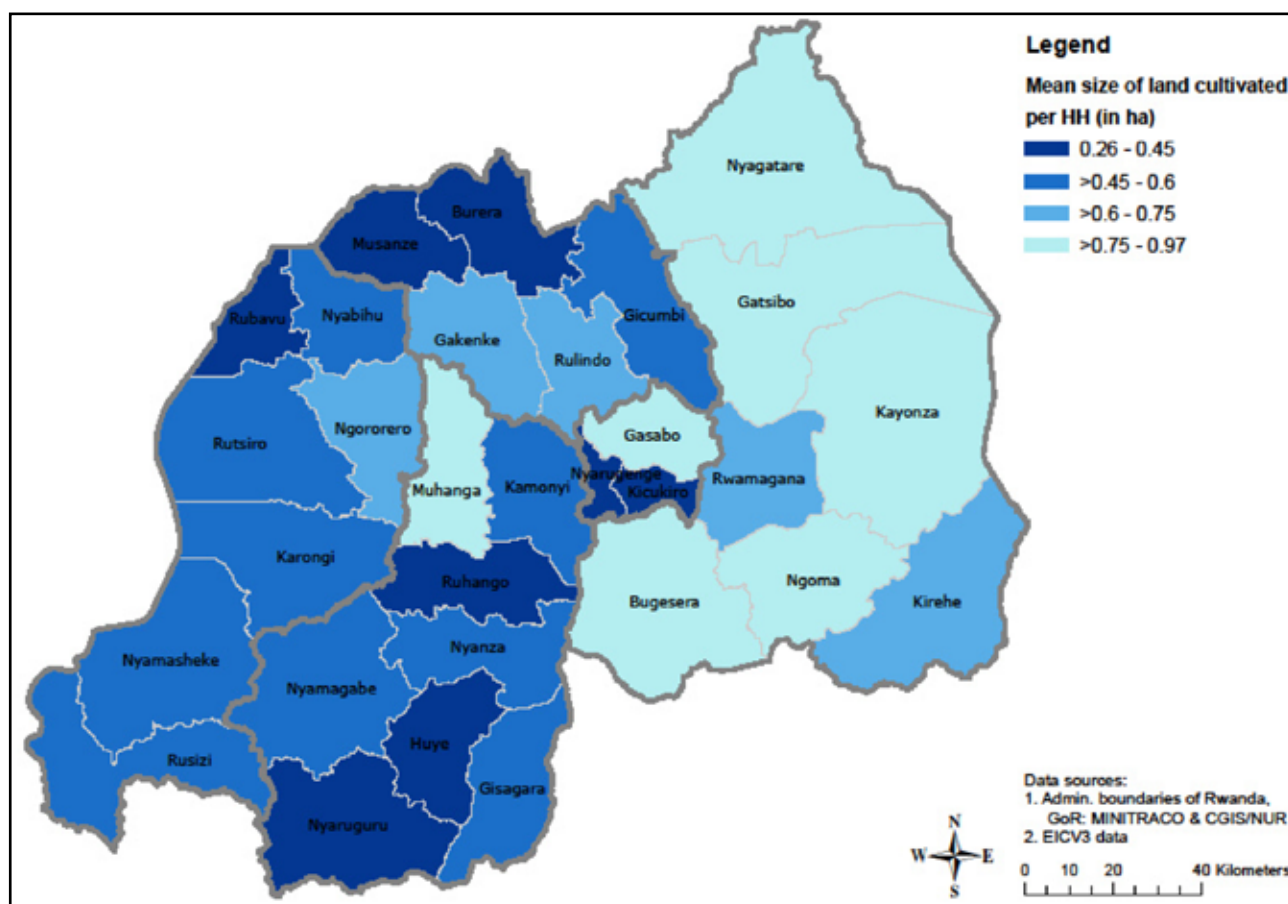

Since the EICV does not require that the plot sizes of a household are measured, it is possible that estimates of land size are not as reliable as those that would be obtained by a specialist agricultural survey, nor are issues of land quality addressed.⁸ Here we classify households which cultivate land into the following categories; very small cultivators (under 0.3 ha), small cultivators (0.3 to 0.9 ha), medium cultivators (0.9 to 3 ha) and large cultivators (more than 3 ha).

⁷ Rwanda State of Environment and Outlook, REMA/UNEP, 2009.

⁸ The CFSVA 2009 survey estimates that nationally, 19% cultivated under 0.1 ha, 37% under 0.2 ha, and 59% under 0.5 ha. EICV3 estimates that 16% cultivated under 0.1 ha, 32% under 0.2 ha, and 66% under 0.5 ha.

Figure 6.1 shows the mean size of land cultivated per household (in ha), by district. The mean size of land cultivated per household in Karongi district is 0.5 ha, which is slightly lower than the national average (0.59 ha). Most of the cultivating households (90%) in this district cultivate under 0.9 ha of land.⁹

Figure 6.1 **Map: Mean size of land cultivated per household (ha), by district**

⁹ The Food and Agriculture Organisation estimates that on average a Rwandan household requires at least 0.9 ha to conduct sustainable agriculture (National Land Policy Report).

Figure 6.2 below presents the proportion of cultivating households with less than 0.3 ha land by district and shows that these households represent 53% in Karongi district. This is higher than the national average (46%).

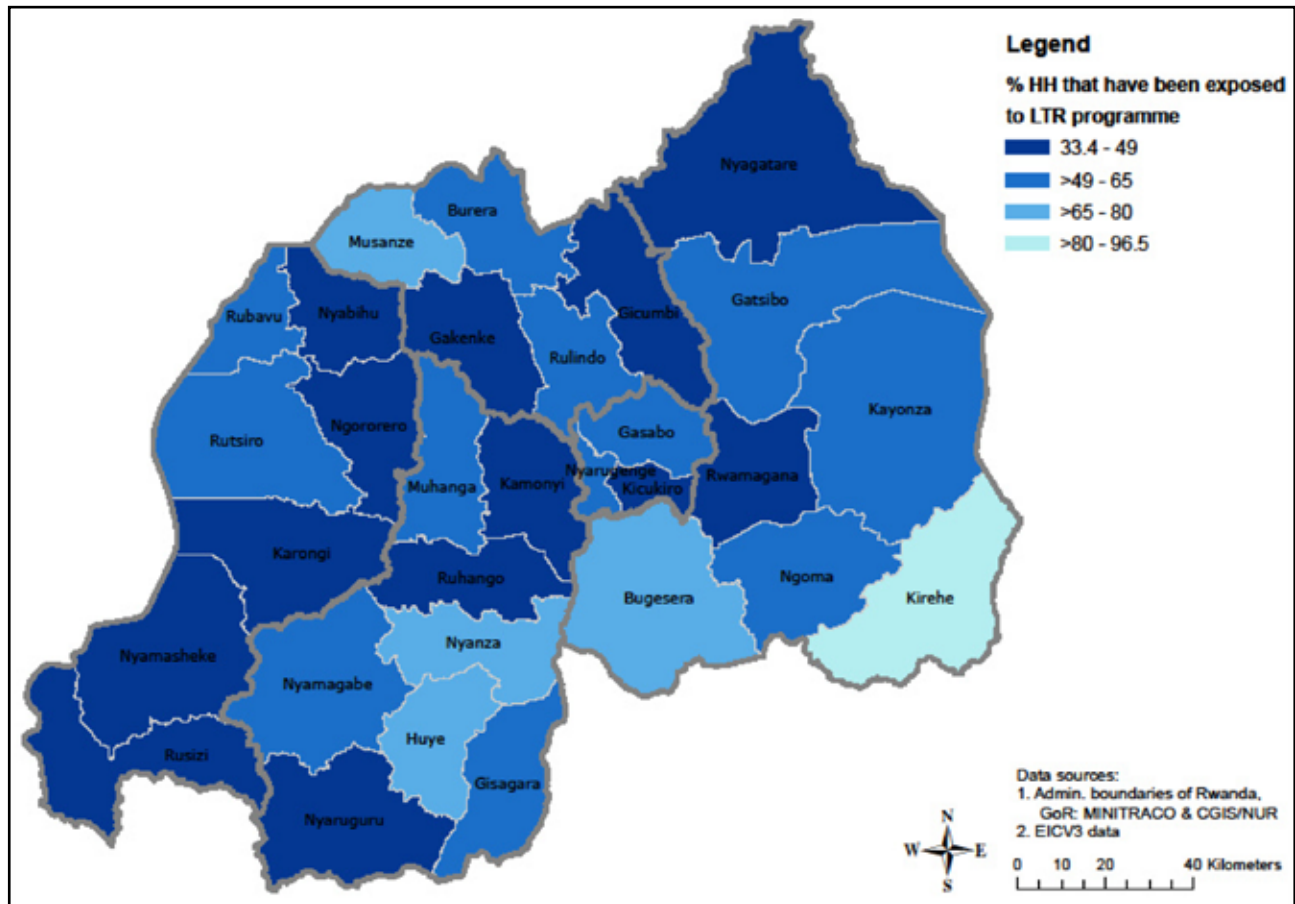

Figure 6.2 **Percentage of cultivating households with less than 0.3 ha land, by district**

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

The map presented in Figure 6.3 below shows the proportion of households that have been exposed to the Land Tenure Regularisation (LTR) programme by district. It shows that 33.4% of households in Karongi district have been exposed to the LTR programme, ranking the district bottom among Western Province districts. It is also below the national average of 54.1%.

Figure 6.3 **Map: Percentage of households that have been exposed to LTR programme, by district**

6.2 Farming practices

Figure 6.4 presents the percentage of cultivated land which has been protected against soil erosion by district.

The percentage of land that has been reported as protected against soil erosion in Karongi district is 90%. Rubavu is reported to have the lowest percentage (47.9%) and Nyabihu the highest (94.1%) among all districts of Rwanda.

Around 78% of cultivated land nationally is reported as being protected against erosion, with Kigali City having the lowest percentage and Southern Province having the highest.

Figure 6.4 Map: Percentage of land protected against soil erosion, by district

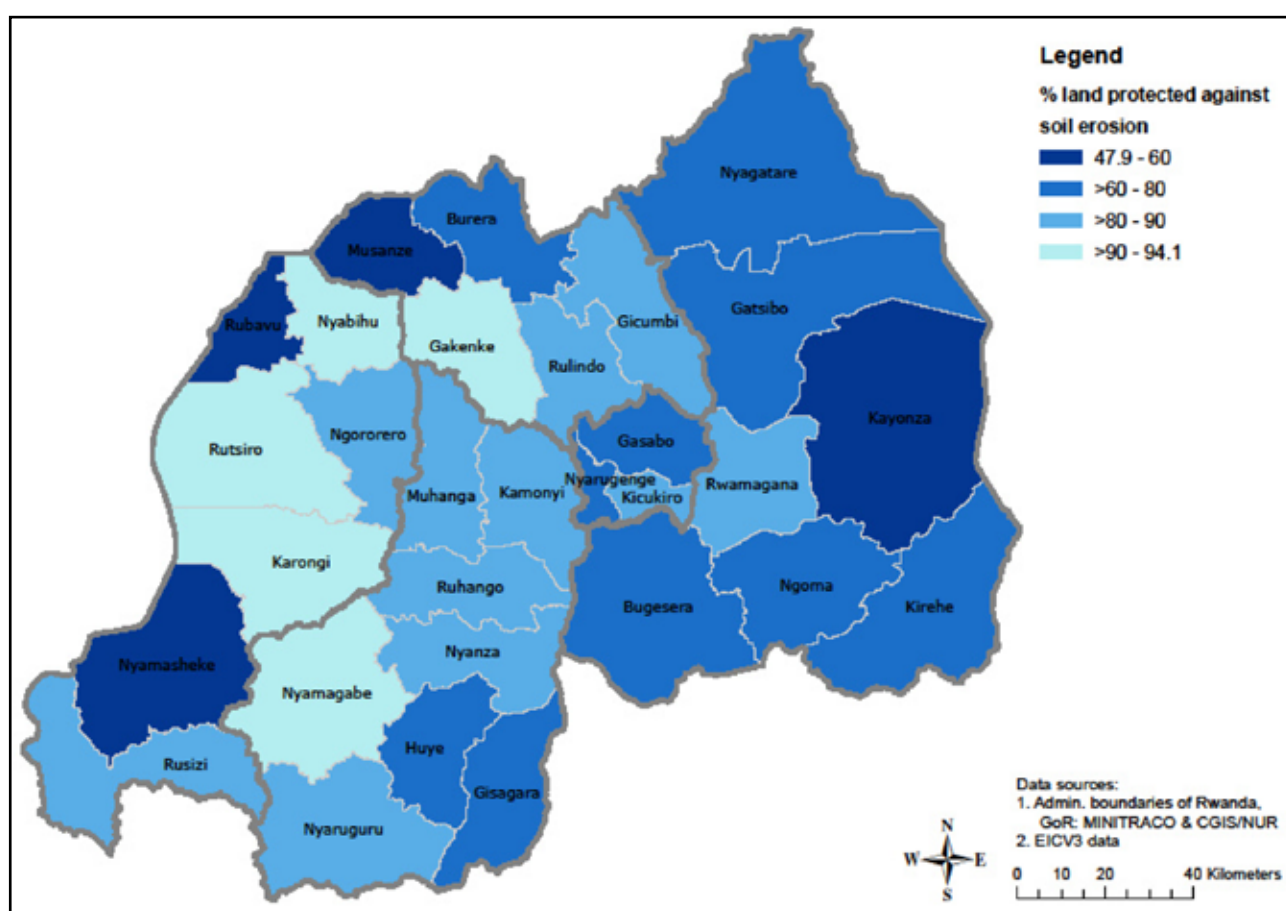

Figure 6.5 presents the percentage of agricultural households incurring expenditure on chemical fertiliser by district, which in Karongi district is about only 1.4%. Rusizi is reported to be the first district in Western Province to have a high percentage of households incurring expenditure on chemical fertiliser (4.6%).

The national average is around 29% with Gakenke district having the highest percentage (63%) and Nyarugenge district the lowest of all districts.

Figure 6.5 **Percentage of agricultural households incurring expenditure on chemical fertiliser, by district**

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

6.3 Commercialisation of crop production

Figure 6.6 below presents the mean share of harvest sold, by district. Commercialisation of crop production overall, as measured by the share of harvest sold (including *households selling zero crops*), is 23% in Karongi district and is the fifth least of all districts.

This average for this indicator is 20.9% country-wide and about 20% in all other provinces outside Kigali City. It is the highest in Nyabihu district (28%) and lowest in Nyarugenge district (11%).

The mean share of harvest sold for fruit and vegetables is lower (19%) than for staple crops (30%) in Karongi district and the pattern remains the same at national level and for urban and rural areas.

Figure 6.6 Mean share of harvest sold, by district

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

6.4 Livestock

In addition to crops, livestock is another important source of income and food for agricultural households.

Figure 6.7 presents the percentage of households raising livestock over the last 12 months by district. It shows that 81% of all households in Karongi district raise some type of livestock.

Karongi is ranked fifth of all districts with a high percentage of households raising livestock over the last 12 months before the survey data collection, and it is ranked second within Western Province after Ngororero district (83%).

This percentage is 68.2% at national level, 72.8% in rural areas, 41.8% in urban areas and it is between 69% and 76% in other provinces excluding Kigali City, which is 34.5%.

Figure 6.7 Percentage of households raising livestock over the last 12 months, by district

Source: EICV3. Note: Horizontal line represents national average.

7 Education

Rwanda Vision 2020 acknowledges Rwanda as ‘suffering from serious deficiencies in terms of trained human capital’ and states as its major objective, the creation of ‘a knowledge-based and technology-led economy’ for which ‘comprehensive human resources development is considered to be one of the necessary pillars [for Rwanda] to reach the status of a middle income country (US\$ 220 GDP/capita in 2003 to US\$ 900 GDP/capita by 2020)’.¹⁰

Although education is this section’s general theme, it focuses essentially on access to education rather than other areas of interest such as pupil/student performance and the quality of services delivered by the education system in Rwanda. This is because the EICV3 did not collect the data necessary for a comprehensive review of these areas of interest.

7.1 Schooling and literacy

Figure 7.1 below presents the percentage distribution of individuals aged six and above that have ever attended school by district.

It shows that 83% of individuals aged six and above in Karongi district that have at some time attended school; the figure is slightly below the national average. Among all districts, the literacy rate is highest in Kicukiro district (94.4%). All other districts range from 78.4% (Nyamagabe) to 91% (Nyarugenge).

Figure 7.1 **Percentage of individuals aged six and above that have ever attended school, by district**

Source: EICV3. Note: Based on all persons aged six and above. Horizontal line represents national average.

Figure 7.2 shows that literacy rate in Karongi district is 70% among population aged 15 and above and is the same as national literacy rate (70%). The least districts is Gisagara with 56.5% while the first is Kicukiro with 89.5%.

The literacy rate is 82.6% in urban areas and 67.3% in rural areas. The average literacy rate in provinces ranges from 67.5% in Southern Province to 68.7% in Northern Province, excluding Kigali City where it is 86.7%.

Figure 7.2 **Literacy rate (%) among population aged 15 and above, by district**

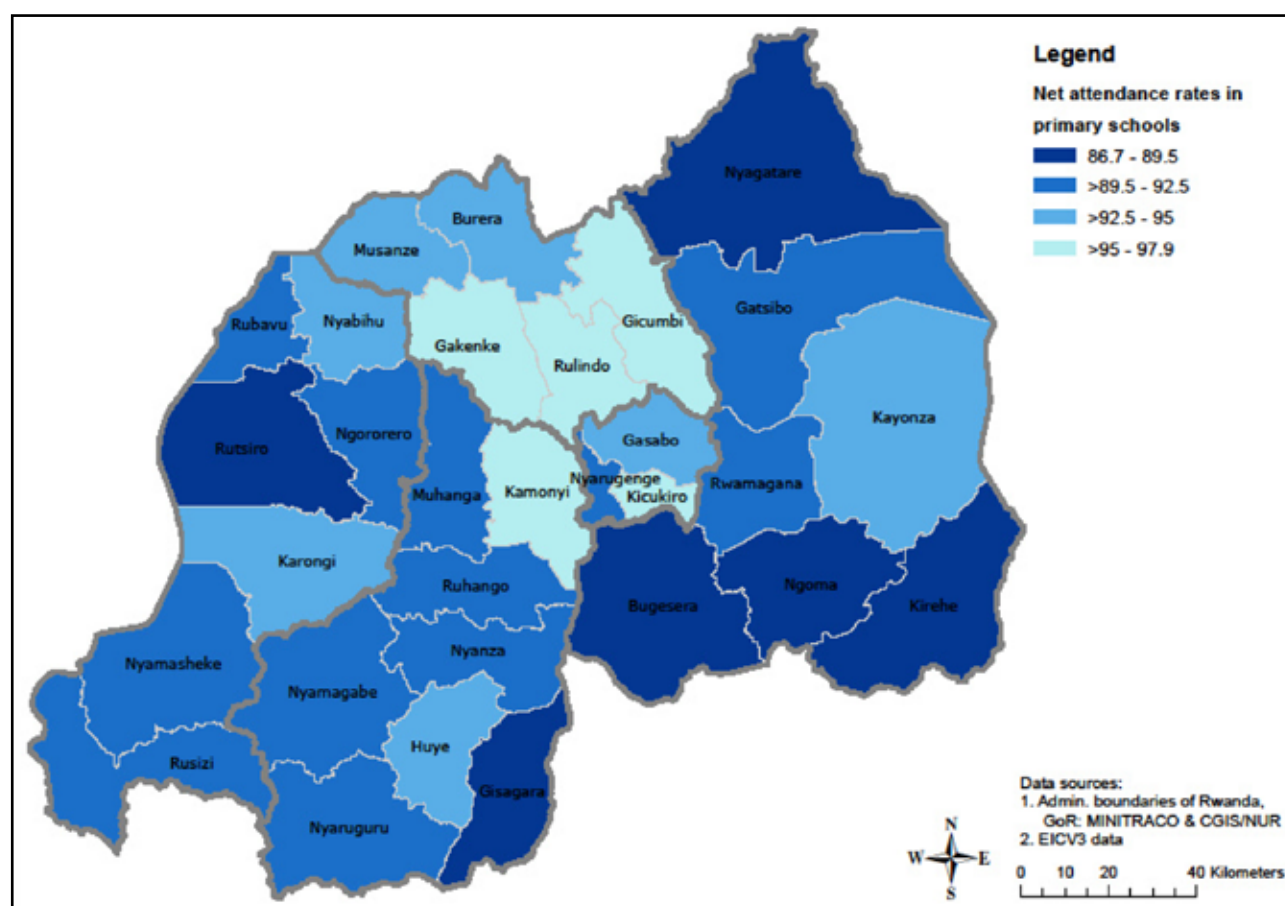

Source: EICV3. Note: Based on all persons 15 and above. Horizontal line represents national average.

7.2 Primary and secondary education

In Rwanda, the education and training system is structured into four main levels. A pre-primary level, which lasts three years, precedes the primary level that lasts six years. Above primary school, two levels exist, the first being a technical or vocational education, which aims at preparing students to enter the labour market once they complete this level, and the second being a secondary education, aimed at those students that wish to pursue a college or university degree before entering the labour market. Each of these levels is a six-year long programme. A fourth level is available for those completing secondary education or, in some cases, such as technical courses like those in the area of engineering, the technical or vocational levels. This education level is referred to as higher learning and comprises colleges and universities, lasting a maximum of seven years. The Nine-Year Basic Education Policy aims at ensuring that all children are 'able to get education in nine years (six years of primary education and three years of general cycle of secondary education) without paying school fees'.¹¹

The map presented in Figure 7.3 below presents the net attendance rates (NARs) in primary school, by district. The NAR in primary school in Karongi district is 94%, which is above the national average of 91.7%, and the average for urban (93.3%) and rural (91.5%) areas.

Figure 7.3 Map: NARs in primary school, by district

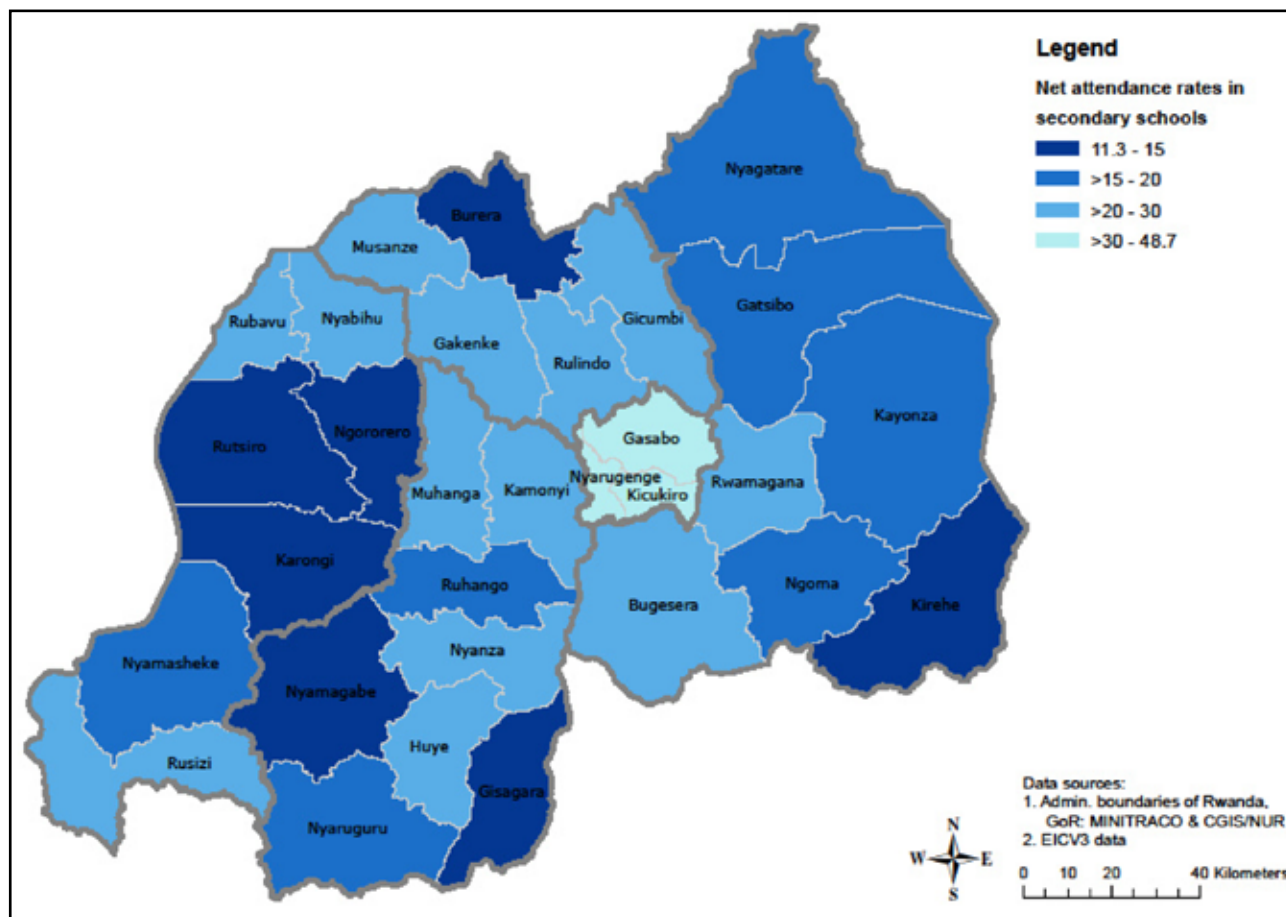

11 Nine-Year Basic Education Implementation – Fast Track Strategies, p3, MINEDUC, November 2008.

The map presented in Figure 7.4 below presents the NAR in secondary school by district. The NAR in secondary school in Karongi is 14%. This is below the national average of 21% and the average for rural and urban areas, which are 18% and 37% respectively.

The three districts with highest NARs in secondary school are Kicukiro, Gasabo and Nyarugenge in Kigali City.

Figure 7.4 **Map: NARs in secondary school, by district**

The EICV3 survey asked users of all levels of the education system questions about their satisfaction with the education services received. Although on a self-perceived basis, these questions allow for a review of the progress observed in the level of satisfaction of users.

Figure 7.5 below presents these results by district. Across all Karongi district, 70% of the users of education services in 2010–11 were satisfied with these services. This is below the national level of users' satisfaction (82%) and puts the district bottom fourth in terms of users' satisfaction, after Nyamasheke (64%), Rutsiro (65%) and Burera (68%).

The results show that satisfaction is lowest among users in rural areas (81%) than in urban areas (87%).

Figure 7.5 Percentage of users satisfied with education services, by district

Source: EICV3. Note: Based on all persons currently attending education. Horizontal line represents national average.

7.3 ICT education

Figure 7.6 presents results of a broader approach, investigating computer literacy in the overall population aged six and above that have used a computer before and would feel confident about using one again, by district.

The survey results show that only 1.3% of the population aged six and above in Karongi district has used a computer before and would feel confident using one again. The district is below the rural area average and is ranked seventh last of all districts of Rwanda.

Only 4% at national level can be classified as computer literate, 14% in urban areas and 2% in rural areas.

Figure 7.6 **Computer literacy: Percentage of population aged six and above that have used a computer before and would feel confident about using one again, by district**

Source: EICV3. Note: Horizontal line represents national average.

8 Vulnerable groups

Groups that are considered particularly vulnerable by the Government of Rwanda are: children under five years old, elderly people aged 60 and over, and people with disabilities. The government delivers a core set of social protection programmes through the Ministry of Local Government (MINALOC), supported by a number of complementary initiatives delivered by other ministries.

The main programme run by MINALOC, and a flagship of the EDPRS 2008–2012, is the Vision 2020 *Umurenge* Programme (VUP) which contains three pillars: VUP public works, VUP direct support, and VUP financial services. The three pillars represent public works for the poor who are able to work, cash transfers for very poor households without labour capacity, and financial services such as the *Ubudehe* Credit Scheme.

In addition to the VUP, MINALOC runs two other social assistance schemes, the Genocide Survivors Support and Assistance Fund, and the Rwanda Demobilisation and Reintegration Commission. Outside these core programmes are the social protection initiatives run by other ministries such as the Girinka 'One Cow per Poor Family' programme of the Ministry of Agriculture, the free basic education programme, subsidised subscriptions for mutual health insurance, and in-kind social care services run by the Ministry of Gender and Family Promotion. Moreover, Rwanda has a limited system of contributory social protection mechanisms that enable people in formal employment to access medical care and an old-age pension.

8.1 People with disabilities

Figure 8.1 presents the percentage distribution of persons with a major disability, by district. It shows that Karongi district has 7.8% of people with a major disability. This percentage is above the national average of 4.5%; Karongi is ranked second among all districts on this indicator after Burera (8.2%).

Figure 8.1 Percentage of persons with major disability, by district

Source: EICV3. Note: Horizontal line represents national average.

8.2 Orphans

Figure 8.2 below presents the percentage distribution of orphans – including those *one parent or both parents* deceased – among the population aged 0–20, by district. It shows that Karongi district has 2.6% of orphans with both parents deceased and 15% of orphans with one parent deceased. Both these indicators are slightly below the national-level averages which are 2.7% and 14% respectively.

Figure 8.2 **Percentage of orphans (one parent or both parents) among population aged 0–20, by district**

Source: EICV3. Note: Based on all persons aged 0–20. Districts ordered by percentage of orphans (one or both parents). Horizontal line represents national average of orphans (one or both parents).

9 Some gender aspects

The resident population of Karongi district is 355,000. Males comprise 165,000 of the resident population and females 190,000, meaning females outnumber males by 25,000 people.

Figure 9.1 below presents the percentage of heads of household by gender in Karongi district. It shows that 31% of households in Karongi district are headed by females and 8% are '*de facto female-headed households*', i.e. those headed temporarily by females in the absence of a male head who is ordinarily present.

Figure 9.1 Sex of heads of household in Karongi

Source: EICV3. Note: In addition to the households who reported the household head as female, other households were headed by females in the absence of a male head. We call these households '*de facto female-headed households*'. These households were temporarily headed by females whose husbands had been away for long periods of time.

Figure 9.2 shows the percentage distribution of employment by gender in Karongi district. It shows that the majority of females in Karongi district are small-scale farmers (81%), 11% are wage farm workers, and 4% are wage non-farm workers. Males are also involved as small-scale farmers (64%); 17% are wage non-farm workers and 12% wage farm workers.

Figure 9.2 **Employment type by sex in Karongi**

Source: EICV3. Note: Based on all working people aged 16 and above.

10 Conclusions for Karongi

The estimated total population of Karongi district, as provided by EICV3 survey results in 2010–2011 is 355,000, representing 14% of the total population of Western Province and 3% of the total population of Rwanda. Females comprise 54% of the population of Karongi district and 80% of the population is aged less than 40 years old.

The average size of the household is about five persons per household (4.6), which is below the national average household size. Karongi district has the third-highest percentage of poor population and within Western Province, it is the second poorest district after Nyamasheke.

In Karongi district, 75% of households use an improved drinking water source and 76.6% of households have access to improved sanitation facilities. This shows that Karongi district has not yet achieved the EDPRS national target for the water and sanitation sector, which is to increase access to drinking water to 85% by 2012.

91.4% of households in Karongi district use beaten earth as their flooring material; only 6.4% of households have cement floors. Within Western Province districts, Karongi is ranked third last with a lower percentage of households using cement floor, after Rutsiro (4%) and Ngororero (4.7%).

In Karongi district, only 2.8% of households use electricity as their main source of lighting; it is ranked third last in Western Province after Rutsiro (0.4%) and Ngororero (0.4%) districts.

31% of households in Karongi district own a mobile phone and it is ranked last among all districts of Western Province and fourth last at national level. In terms of households owning a radio, Karongi is ranked second last among all districts of the country after Rubavu.

The mean walking distance to a health centre in Karongi district is 77.7 minutes and only 34% of households walk under an hour on average to a health centre. Compared to the Western Province average, health centres in Karongi district are further from household dwellings by about 10 minutes on average.

Nationwide, Karongi is ranked second when it comes to hours spent on domestic duties (after Rutsiro, which has an average of 26 hours).

In Karongi district 33.4% of households have been exposed to the LTR programme, the lowest figure of all Western Province districts. It is also below the national average of 54.1% country-wide.

Karongi is ranked fifth among all districts and second within Western Province, after Ngororero (81%), for households raising livestock over the 12 months before the survey data collection.
