

REPUBLIC OF RWANDA

NATIONAL INSTITUTE OF STATISTICS OF RWANDA

EICV3 DISTRICT PROFILE

Muhanga

Foreword

The 2010/11 Integrated Household Living Conditions Survey (EICV3) is the third in the series of surveys which started in 2000/01 and is designed to monitor poverty and living conditions. The survey fieldwork commenced in November 2010 and continued for one full year. In 2010/11, for the first time the achieved sample size of 14,308 households in the EICV3 was sufficient to provide estimates which are reliable at the level of the district.

To date, twelve publications have been issued by the National Institute of Statistics Rwanda (NISR) using EICV3 data:

- A report with an overview of main indicators;
- A poverty profile;
- A series of ten thematic reports, each exploring in depth a theme from the Economic Development and Poverty Reduction Strategy (EDPRS). The ten reports in this series are:

(i) Economic Activity; (ii) Utilities and Amenities (water/sanitation/energy/housing/- transport/ Information and Communication Technology (ICT)); (iii) Social Protection; (iv) Environment and Natural Resources; (v) Consumption; (vi) Gender; (vii) Youth; (viii) Education, (ix) Agriculture; and (x) Income.

This district profile is one of 30 further documents issued by the NISR. Based on EICV3 data, each district profile discusses the living conditions in one of the 30 districts of Rwanda.

Yusuf MURANGWA
Director General

Acknowledgements

This report has been prepared with participation of a large number of individuals and organizations. We would like to express our gratitude to all of them.

We would like to express our sincere appreciation to the partner Ministries, Institutions, agencies and development partners for their respective great support and inputs throughout the process of writing and publishing this report.

We also express our profound gratitude to the team of Oxford Policy Management (OPM), and in particular to Mary Strode and her colleagues. Their technical assistance contributed to the success of this report.

We also thank the technical staff from National Institute of Statistics of Rwanda (NISR) for their unfailing participation in all activities of the survey data analysis, which was coordinated by HABIMANA Dominique and his assistants, APPEL Derek and KARANGWA John.

We appreciate the valuable support provided by administrative and financial departments of the NISR. Their interventions allowed this survey data analysis to be carried out smoothly and under good conditions.

1. Introduction

On 7 February 2012, the President of Rwanda officially launched the design phase of the EDPRS2. A key input into the development of the EDPRS2 is the evidence collected through the third Integrated Household Living Conditions Survey (EICV3), fieldwork for which was carried out by the NISR between October 2010 and November 2011. In 2010–11, for the first time the achieved sample size of 14,308 households in the EICV was sufficient to provide estimates which are reliable at the level of the district. This district profile presents the key findings from EICV3 for the district of Muhanga in the Southern Province.¹

This profile contains key baseline indicators for the district which are structured into eight sections as follows:

1. Demographic characteristics;
2. Poverty indicators;
3. Standards of living, which includes water and sanitation, housing and energy, ownership of selected durables, distance to facilities/services, and use of financial services;
4. Economic activities and income sources;
5. Agriculture, which includes land, farming practices, commercialisation of crop production, and livestock;
6. Education indicators covering schooling and literacy, primary and secondary education, and ICT education;
7. Vulnerable groups, including persons with major disabilities and orphans; and
8. Gender issues, including female heads of household and employment type by sex.

¹District tables underlying all figures in this report are presented in the Annex.

Figure 1.1 Southern Province

2. Demographics

Figure 2.1 presents the distribution of population in Muhanga district by age group and sex. The population of Muhanga district is 297,000; about 52% are aged 19 years or younger. People aged 65 years and above make up 4%. More than a half (54%) of the population is composed of females and the majority is young, with 79% under 40 years of age.

Figure 2.1 Distribution of population in Muhanga by age groups and sex (000s)

Source: EICV3.

Figure 2.2 below presents the ratio of females per 100 males by district. It shows that females outnumber males in Muhanga district with 117 females per 100 males, which is above the national average of 111 females per 100 males. The district is ranked fourth at national level on this indicator after Nyamasheke, Rubavu and Musanze.

Figure 2.2 Number of females per 100 males, by district

Source: EICV3. Note: Horizontal line represents national average.

As shown in Figure 2.3 below, Muhanga district an average size of household which is slightly below that of the national average household size (5) with 4.7 persons. It ranks 16th among all districts. The district with the largest mean household size is Rusizi with 5.6 members per household.

Figure 2.3 Mean household size, by district

Source: EICV3. Note: Horizontal line represents national average.

3. Poverty

The poverty line defines a level of household consumption per adult below which a household is deemed to be poor. The poverty line used here is set with reference to a minimum food consumption basket, which was judged to offer the required number of calories required for a Rwandan who was likely to be involved in physically demanding work, along with an allowance for non-food consumption. An extreme poverty line was also set as the cost of buying the food consumption basket if nothing was spent on non-food at all; this line corresponds to RWF 83,000 and the poverty line corresponds to RWF 118,000.

Figure 3.1 presents the percentage of the population classified into extremely poor, poor and non-poor. It shows that Muhanga district is among the districts with a high percentage of extreme-poor and poor² population categories. These categories combined represent 53.6% of the population in Muhanga.

Almost a half (46.4%) of the population in Muhanga district is identified as non-poor; 26.2% are extremely poor and 27.4% are poor (excluding extreme-poor). Compared to other districts in Rwanda, Muhanga district ranks the eighth on poverty.

Figure 3.1 Percentage of population identified as poor and extremely poor, by district

Source: EICV3. Note: Horizontal lines represent national averages of poverty and extreme poverty. Districts sorted by overall poverty level.

² The poor category excludes extreme-poor.

The map presented in Figure 3.2 below shows that Muhanga district is among the districts within the interval of 25%–40% of the population identified as poor (26.2% extreme poverty; 27.4% poverty).

Nyarugenge, Kicukiro and Musanze are the leading districts with under 25% of their populations classified as poor, as indicated below.

Figure 3.2 Map: Percentage of population identified as poor, by district

4. Standard of living (utilities and amenities)

This section focuses on water and sanitation, energy and housing, ownership of selected durables, distance to facilities/ services, and use of financial services. The Vision 2020, Rwanda's vision of its future development, identified the utilities and amenities discussed in this section as all being crucial requirements for Rwanda's social and economic development.

4.1. Water and sanitation

The EICV3 results indicate that 84.4% of households in Muhanga district use an improved drinking water source. Improved drinking water sources include protected springs, public standpipes, water piped into dwelling/yard, boreholes, protected wells and rainwater collection, as defined by the World Health Organisation (WHO). Figure 4.1 shows that the majority of households in Muhanga use protected spring water (65%), followed by public standpipes or water piped into dwellings (15%). However, 16% of households in this district still use unimproved water sources.

Muhanga district is close to achieving the EDPRS national target requirement for the water and sanitation sector, which is to increase access to safe drinking water to 85% by 2012.

Figure 4.1 Main source of drinking water (percentage of households) in Muhanga

Source: EICV3. Improved sources presented in blue, unimproved in red.

The map presented in Figure 4.2 below shows that Muhanga district ranks among the top districts with between 80 and 90% of households using an improved drinking water source. The majority of the population in Muhanga district use an improved water source (84.4%), which is far higher than at the national level (74.4%).

Figure 4.2 Map: Percentage of households using improved drinking water source, by district

Figure 4.3 indicates that more than half (62.2%) of households in Muhanga district are located within 15 minutes' walking distance of an improved water source. Muhanga district is ranked fourth by the percentage of households who are within 15 minutes' walking distance of an improved water source.

However, 3.6% of households in Muhanga district still walk for 30 minutes and more to reach an improved water source. This percentage is small compared to its neighbour Ruhango (7.2%).

The mean time to an improved water source in Muhanga district is 9.6 minutes, which is also below the national average (14.4 minutes).

Figure 4.3 Percentage of households within 15 minutes' walking distance to improved water source, by district

Source: EICV3. Note: Horizontal line represents national average.

The WHO/UNICEF Joint Monitoring Programme defines an 'improved sanitation facility' as flush toilets and pit latrines with a floor slab.³

The map presented in Figure 4.4 presents the percentage of household with improved sanitation facilities by district. It shows that majority of households (76%) in Muhanga district have access to improved sanitation facilities. This percentage is slightly higher than the national average (74.5%).

The EDPRS target on sanitation is to have nationally 65% of the total population with hygienic sanitation by 2012. It is clear that Muhanga district has achieved and even surpassed this target by 11 percentage points.

Figure 4.4 Map: Percentage of households using improved sanitation, by district

³ <http://www.wssinfo.org/definitions-methods/watsan-categories/>

4.2 Housing and energy

This section describes the housing and energy characteristics of the household. The habitat sub-sector has the main objective of contributing to sustainable economic growth and the wellbeing of the Rwandan population by improving habitat and urbanism infrastructure. The sub-sector engages in a programme to modernise cities in Rwanda, especially in the habitat areas, with interventions to curb the proliferation of unplanned housing and to improve living standards in irregular neighbourhoods.⁴

The guiding documents of the sub-sector are the Vision 2020 and the EDPRS. As summarised in the sub-sector's EDPRS Self-Assessment Report (2008–2011), the objectives of the Vision 2020 with regard to human settlement are summarised as follows:

- Having urbanisation master plans and particular development plans for towns;
- Using urban land according to adopted plans; and
- Developing basic infrastructure in urban areas and other rural development zones.

The objectives of the EDPRS with regard to human settlement and management of public property are worded as follows:

- Planning and development of improved human facilities in both rural and urban areas;
- Sustainable and rational use of land and environment protection;
- Designing urban master plans;
- Construction of regrouped settlements (*Imidugudu*);
- 10,000 ha of marked-out and improved plots;
- Restructuring of seven districts where the population suffer from bad living conditions; and
- Accommodating public facilities into comfortable buildings in accordance with the need for rapid and quality services.

In order to achieve these objectives, the sector has stipulated specific sub-programmes to be focused on:

- Real estate promotion, construction and maintenance of public buildings;
- Registration of land plots with all necessary statutory requirements;
- *Imidugudu* promotion and development of master plans;
- Support for housing financing;
- Establishment of main planning, urban architectural designs and simplified plans of 30 municipalities (district towns);
- Improvement of informal/peripheral neighbourhoods;
- Sensitisation on the standards of construction and urbanism as well as the protection of the urban environment; and
- Promotion of low cost and indigenous good materials and techniques for home building.

⁴ Introduction to the habitat and urbanism sub-sector, MINIFRA (<http://www.mininfra.gov.rw/index.php?id=26>)

Energy is regarded as a key requirement for the development of the national economy and essential to the development of industries and businesses, as well as to the delivery of high-quality services from social institutions such as health facilities, schools and administrative offices.

The EDPRS energy sector objectives are increasing access to energy, a sustainable tariff structure, diversification of energy resources, and security and strengthening of institutional framework and institutional capacity. Two main targets and indicators related to electricity generation capacity and numbers of electricity connections were defined for the period of the 'EDPRS'.⁵

4.3.1 Dwelling characteristics

Figure 4.5 describes the construction material used for flooring by district. It shows that Muhanga district is ranked 13th country-wide by percentage of households with a cement floor (14.4%). Beaten earth is used by the majority of the district's population (80%).

EICV3 results also show that the percentage of households in Muhanga which use cement as a flooring material is slightly below the national level (17%).

Figure 4.5 Percentage of households with cement floor, by district

Source: EICV3. Note: Horizontal line represents national average.

Figure 4.6 below presents the percentage of households with mud-covered tree trunks as wall material by district. The main wall material of dwellings were classified as follows: mud bricks, mud bricks covered with cement, tree trunks with mud, tree trunks with mud and cement, oven-fired brick, and other unspecified material.

In Muhanga district, 7.3% of households use mud-covered tree trunks as a wall material; 66% use mud bricks and 20% mud bricks covered with cement. At national level, 35.2% of households use mud-covered tree trunks as wall material while in urban areas the figure is only 17.1% and 38.3% in rural areas.

It is clear that Muhanga district is among districts with a high percentage in terms of improving wall construction material.

⁵ Energy sector EDPRS Self-Assessment, EWSA, MININFRA, November 2011.

Figure 4.6 Percentage of households with mud-covered tree trunks as wall material, by district

Source: EICV3. Note: Horizontal line represents national average.

The primary sources of energy used for lighting by households were categorised as follows: electricity, oil lamp, firewood, candle, lantern, battery, and other unspecified sources.

The map presented in Figure 4.7 presents the distribution of households using electricity as their main source of lighting by district. In Muhanga district, only 5.5% of households use electricity as their main source of lighting. At the national level, the figure is only 10.8%.

Figure 4.7 Map: Percentage of households with electricity as main source of lighting, by district

4.3 Ownership of selected durables

The EICV3 provides information on ownership of selected ICT devices by district and categorises them into mobile phone, landline phone, computer, radio, TV set, and video/DVD player.

When the Vision 2020 was elaborated in 1998/99, the national consultative process stated: ‘Telecommunication coverage in Rwanda is very low. The communication policy will take advantage of the small size of the country, its high population density and the single local language to attract investors so that the sector can be liberalised. By 2020, Rwanda projects to have internet access at all administrative levels, for all secondary schools and for a large number of primary schools. Telephone services will be widespread in rural areas’.

Ever since, the ICT sector has been regarded a key element of Rwanda’s development process. It is expected to create jobs, facilitate general economy development, and ensure that Rwanda will transform into a globally competitive, information-rich, knowledge-based economy.⁶

In line with these aspirations, the EDPRS/Common Performance Assessment Framework defines two sector-relevant progress indicators: ICT penetration in terms of voice (i.e. phone) and data (i.e. internet) services.

Figure 4.8 below describes the percentage of households owning a mobile phone by district. It indicates that about a half (46%) of the households in Muhanga district own a mobile phone. The district is ranked among the best 11 districts at national level on this indicator. Country-wide, about 45.2% of households own mobile phones.

Figure 4.8 Percentage of households owning mobile phone, by district

Source: EICV3.

Figure 4.9 below describes the percentage of households owning a radio by district. More than a half (64%) of households in Muhanga district owns a radio, which is slightly higher than the national average (60.3%).

The top-ranked district is Nyagatare district, where 69.5% of households own a radio. Muhanga is ranked 10th country-wide on this indicator.

⁶ ICT Sector EDPRS Self-Assessment Report, Ministry of Information and Communications Technology, December 2011.

Figure 4.9 Percentage of households owning radio set, by district

Source: EICV3. Note: Horizontal line represents national average.

4.4 Distance to facilities/services

Walking distance to basic services can be considered an indicator of both provision/coverage of such services and the remoteness of households' dwellings. The basic services were categorised into Food Market/Shop, Primary School, Secondary School, and Health Centre.

The map presented in Figure 4.10 shows the mean walking distance to primary school by district. It shows that Muhanga is classified among districts with a longer mean walking distance to a primary school (within the interval of 21.6–28 minutes).

The mean walking distance to primary school in Muhanga district is 26.4 minutes and more than a third (38.2%) of households are between 30 and 59 minutes of a primary school. This walking distance to a primary school in Muhanga district is slightly shorter than the mean distance at national level (27.2 minutes).

Figure 4.10 Map: Mean walking distance to basic services (in minutes): Primary school, by district

The map presented in Figure 4.11 below shows the mean walking distance to a health centre by district. The mean walking distance to a health centre in Muhanga district is 72 minutes and more than a third (38%) of households walk at least one hour on average to reach a health centre.

The mean walking distance to a health centre is 35 minutes in urban areas and 64.4 minutes in rural areas, while it is one hour country-wide.

Figure 4.11 Map: Mean walking distance to basic services (in minutes): Health centre, by district

4.5 Use of financial services

Figure 4.12 below presents the percentage of households with at least one savings account by district. It shows about a third (37%) of households in Muhanga district have at least one savings account, ranking the district in the last 16 districts country-wide which are below the national level of 39.4% of households with at least one savings account.

At the sub-national level, 60.4% of urban households have at least one savings account and 35.8% in rural areas. Apart from Kigali City, which has the highest percentage of households with at least one savings account, the predominantly rural provinces vary between 33.8% and 40.1%.

In terms of individuals aged 18 and above, the EICV3 shows that Southern Province is among the last two provinces with the lowest number of individuals that have savings accounts (17.7% and 17.3% for Southern and Western Provinces respectively).

Figure 4.12 Percentage of households with at least one savings account, by district

Source: EICV3. Note: Horizontal line represents national average.

5. Economic activity and income sources

5.1 Economic activity

This section refers to the population aged 16 years and above, as 16 years is the legal working age in Rwanda. Employment questions were asked of all individuals aged six years and above but only data for those aged 16 years and above appear in this section. It should be noted that the survey collected data about all the jobs people did over a 12-month period, as well as about those they did in the last seven days. We refer to the former as usual economic activity and to the latter as current economic activity.

The formal International Labour Organisation (ILO) definition of unemployment is those people who work under one hour per week but are actively seeking work and able to start immediately. In many low-income countries that do not have social safety nets, formal unemployment is quite low because it is rare to be able to afford to do no work at all. We present here statistics for formal unemployment and an estimate for the small number of discouraged workers. We also look at broader measures such as underemployment, which consist of those working part time, but who would like to work more hours a week.

Figure 5.1 below presents the percentage distribution of usual employment, unemployment, and economic inactivity among persons aged 16 years and above by district.

The overall employment rate is 86.4% of the resident population aged 16 years and above in Muhanga district; the unemployment rate is 0.3% and the economic inactivity rate is 13.4%. As shown in Figure 6.1 below, Muhanga district is ranked the ninth country-wide by employment rate, with Burera district of Northern Province emerging the leading district with 94%.

Figure 5.1 Economic activity: Employment, unemployment, and economic inactivity among persons aged 16 and above (usual), by district

Source: EICV3. Note: Based on all persons aged 16 and above. Horizontal line represents national average of employment rate.

Figure 5.2 presents employment types by *usual main job* in Muhanga district. It further indicates that the majority of the population aged 16 years and above in Muhanga are *independent farmers* (74%), followed by *wage non-farmers* (13%). *Independent non-farmers* represent 8%, while *wage farmers* account for 4%. Only 1% fall into the *unpaid non-farm and others* category.

Figure 5.2 Employment types (usual main job) in Muhanga

Source: EICV3. Note: Based on all persons aged 16 and above usually working.

Figure 5.3 below presents the industry of usual main jobs in Muhanga district. Agriculture is regarded as the main economic activity with 78% for the population aged 16 years and above, followed by Trade with 7%. Other services (including utilities and financial services) are 5%; whereas manufacturing, government and other services are all carried out to an insignificant extent (under 2%).

Figure 5.3 Industry of usual main jobs in Muhanga

Source: EICV3. Note: Based on all persons aged 16 and above usually working.

Figure 5.4 below presents the percentage of underemployed people – meaning the percentage of working people that worked 35 hours or fewer in all their jobs in the previous seven days – by district. Taking all the jobs that people did in the seven days before the survey we can start to understand underemployment. People whose main job is a waged job work on average 45 hours per week in all of their jobs (though this type of job holder is the least likely to be involved in more than one job). Those who work in small businesses as owners work 36 hours a week. Those who work as independent farmers work just 24 hours per week in all jobs, and waged farm workers work just 29 hours. People working on farms are the most likely to be working in more than one job at a time.

Setting a definition of underemployment at 35 hours a week or fewer, two-thirds of Rwandese adults can be defined as underemployed. Those working in farm jobs are the most likely to be underemployed, although it should be noted that farm

workers must spend more time on gathering fodder for animals, fetching water and firewood, and marketing produce, which is not here counted as economic activity.

Only Kigali City has a significant percentage of the population working more than 35 hours a week, which is related to the higher than average proportion of jobs in Kigali that are non-farm paid work.

The figure below indicates that the majority (77.3%) of the population aged 16 years and above in Muhanga district worked 35 hours or fewer in all their jobs in the seven days prior to survey data collection and are classified as underemployed. This proportion is above the national level of 68%.

Figure 5.4 Underemployment (percentage of working people that worked 35 hours or fewer in all their jobs in the previous seven days), by district

Source: EICV3. Note: Based on all adults aged 16 years and above who worked in the previous seven days, and gave the numbers of hours worked in all their jobs. Horizontal line represents national average.

Figure 5.5 below describes the median number of hours spent in the last seven days on domestic duties by men and women by district. All persons were asked how many hours they spent on domestic duties. Fetching water, fodder and firewood are officially classed as economic activity according to the ILO.

In Muhanga district, the median number of hours spent on all domestic duties in the last seven days, by all persons aged 16 and above, including working and non-working persons, is 20 hours where males spent 11 hours compared to females, who worked 28 hours. At national level, the average for males is nine hours and 26 hours for females.

Figure 5.5 Median number of hours spent in last seven days on domestic duties by men and women, by district

Source: EICV3. Note: Domestic duties include foraging for firewood, fodder searching, water fetching, going to the market, cooking, and other household chores. Fetching water, fodder and firewood are officially classed as economic activity according to the ILO. Estimates based on all adults aged 16 years and above (both working and non-working). Horizontal lines represent the national average of median hours spent on domestic duties by men (lower line) and women (upper line). Districts are ordered by the median number of hours spent on domestic duties by women.

5.2 Income sources

This section focuses on five main components of income: agricultural income, wage income, business income, rent income, and income from transfers.

- Household agricultural income: this component is first divided into agricultural income (income from land cultivation) and livestock income. Unless otherwise specified, this report sums the two components into one agricultural component. It includes revenues from sale of crops, processed crop products, livestock products and other agricultural products, own consumption of food and non-food products, and the revenues from renting out livestock and sale of small animals. The income aggregate deducts costs on crop inputs, inputs used for processing crop products, and expenditure on livestock and the cost of renting land. Within the costs, the income aggregate includes the depreciation of land and agricultural equipment. The depreciation rate is equal to 0.2 per annum.
- Wage income: this includes cash and in-kind revenues received from farm and non-farm work. In-kind payments include food and other agricultural products, provision of house and other benefits received for the work.
- Non-farm self-employment (business): this includes income received net of labour and other inputs.
- Income from rents: this includes actual rents received from renting out livestock, agricultural equipment and land (rent and sharecropping), as well as imputed rental value of owner-occupied dwellings.
- Transfers: transfers include remittances received (cash and in-kind) and other private transfers. It also includes public transfers. Private transfers received from dowry and sales of assets and land are excluded.

All income values are in real terms, with the price index equal to 100 in January 2011. The price deflator used here to express values in real terms is the same one that was used in the poverty analysis. The price index is based on a general basket of goods including food and non-food items, thus implicitly assuming the income generated by a household is spent on this general basket of goods.

The EICV3 results indicate that at the national level, agriculture contributes the largest share of a household's income (46%), followed by wage income (25%), business income (i.e. self-employment), transfers, and rents.

Figure 5.6 below presents the household income shares in Muhanga district. It shows that half of households' income is driven

by agriculture (55%), followed by wage income (20%), while rents, business income, and private transfers account for 9%, 8% and 7%, respectively. The smallest contributor to household income in Muhanga district is public transfers with about 1%.

Figure 5.6 Household income shares in Muhanga

Source: EICV3.

6. Agriculture

This section seeks to inform and support the development of the EDPRS2 with data from the EICV3 and focuses on the agriculture sector. It provides detailed insights into the living conditions of the Rwandan population with regard to agricultural production. Agriculture is the backbone of Rwanda's economy and the majority of households in Rwanda are currently engaged in some sort of crop or livestock production activity.

In recent years, the Government of Rwanda has implemented several ambitious programmes to increase the productivity of the agriculture sector. The motivation behind these actions is reflected in the Ministry of Agriculture's vision: 'Our Vision is to modernise Agriculture and Livestock to achieve food security. One of the key pillars of this vision is the transformation of Agriculture from subsistence to a productive high-value, market-oriented farming that is environmentally friendly and has an impact on other sectors of the economy.'

This section explores a wealth of evidence on agricultural production collected through the EICV3.

6.1 Land

One of the major inputs in agricultural production is land. Rwanda is a small country with total arable land of about 1.4 million hectares.⁷

Given a growing population combined with strong reliance on agriculture, it is clear that land is one of the scarcest resources in Rwanda. The EICV collects detailed data on land use and the agricultural activities of Rwandan households. It is however important to note that the EICV is not a specialised agricultural survey.

Since the EICV does not require that the plot sizes of a household are measured, it is possible that estimates of land size are not as reliable as those that would be obtained by a specialist agricultural survey, nor are issues of land quality addressed.⁸ Here we classify households which cultivate land into the following categories; very small cultivators (under 0.3 ha), small cultivators (0.3 to 0.9 ha), medium cultivators (0.9 to 3 ha) and large cultivators (more than 3 ha).

⁷ Rwanda State of Environment and Outlook, REMA/UNEP, 2009.

⁸ The CFSVA 2009 survey estimates that nationally, 19% cultivated under 0.1 ha, 37% under 0.2 ha, and 59% under 0.5 ha. EICV3 estimates that 16% cultivated under 0.1 ha, 32% under 0.2 ha, and 66% under 0.5 ha.

Figure 6.1 shows the mean size of land cultivated per household (in ha), by district. The mean size of land cultivated per household in Muhanga district is 0.97 ha. This is the average mean size of land cultivated per household in some of the districts in Rwanda. Muhanga district is among the seven districts country-wide that have a high percentage of households cultivating (83%) under 0.9 ha of land.⁹

Figure 6.1 Map: Mean size of land cultivated per household (ha), by district

Figure 6.2 below presents the proportion of households cultivating under 0.3 ha land by district. It shows that 42% households in Muhanga district cultivate on under 0.3 ha. This percentage is slightly lower than the national level of 46%.

Compared to other districts, Muhanga is ranked among the last nine districts that cultivate on under 0.3 ha of land, as indicated below.

⁹ The Food and Agriculture Organisation estimates that on average a Rwandan household requires at least 0.9 ha to conduct sustainable agriculture (National Land Policy Report).

Figure 6.2 Percentage of cultivating households with under 0.3 ha land, by district

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

The map presented in Figure 6.3 below shows the proportion of households that have been exposed to the Land Tenure Regularisation (LTR) programme by district. The results indicate that half (52.3%) of households in Muhanga district have been exposed to the LTR programme. This proportion is close to the country-wide average 54.1%. In addition, when compared with other districts, it is ranked among the districts where the LTR ranges from 65-80%.

Figure 6.3 Map: Percentage of households that have been exposed to LTR programme, by district

6.2 Farming practices

Figure 6.4 presents the percentage of cultivated land which has been protected against soil erosion by district.

A large percentage of land (88.3%) has been reported as protected against soil erosion in Muhanga district. Rubavu is reported to have the lowest percentage (47.9%) and Nyabihu in Southern Province the highest (94.1%). Around 78% of cultivated land nationally is reported as being protected against erosion, with Kigali City having the lowest percentage.

Figure 6.4 Map: Percentage of land protected against soil erosion, by district

Figure 6.5 presents the percentage of agricultural households incurring expenditure on chemical fertiliser by district, which in Muhanga district is 30.3%, slightly above the national average (29%). Country-wide, Gakenke from the Northern Province incurs the highest percentage (63%) and Nyarugenge district the lowest (2.2%) of all districts.

Figure 6.5 Percentage of agricultural households incurring expenditure on chemical fertiliser, by district

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

6.3 Commercialisation of crop production

Figure 6.6 below presents the mean share of harvest sold, by district. Commercialisation of crop production overall, as measured by the share of harvest sold (including *households selling zero crops*). Muhanga district is represented by only 12.7% which is much less than that of the national level with 20.9%. Nyabihu district has the highest share of sold harvest (28%) and lowest is Nyarugenge district in all districts (10.8%).

The mean share of harvest sold for fruit and vegetables (16.3%) is higher than for staple crops (10.3%) in Muhanga district; this diverges from the pattern at national level.

Figure 6.6 Mean share of harvest sold, by district

Source: EICV3. Note: Based on all households cultivating land for crop production. Horizontal line represents national average.

6.4 Livestock

In addition to crops, livestock is another important source of income and food for agricultural households.

Figure 6.7 presents percentage of households raising livestock over the last 12 months by district and shows that the majority (77%) of households in Muhanga district raise some type of livestock. It is therefore among the top eleven districts by the percentage of households raising livestock; the figure for Muhanga district is higher than for the national level (68%). The district with the smallest percentage is Nyarugenge in Kigali City (23%).

Figure 6.7 Percentage of households raising livestock over the last 12 months, by district

Source: EICV3. Note: Horizontal line represents national average.

7. Education

Rwanda Vision 2020 acknowledges Rwanda as 'suffering from serious deficiencies in terms of trained human capital' and states as its major objective, the creation of 'a knowledge-based and technology-led economy' for which 'comprehensive human resources development is considered to be one of the necessary pillars [for Rwanda] to reach the status of a middle income country (US\$ 220 GDP/capita in 2003 to US\$ 900 GDP/capita by 2020)'.¹⁰

Although education is this section's general theme, it focuses essentially on access to education rather than other areas of interest such as pupil/student performance and the quality of services delivered by the education system in Rwanda. This is because the EICV3 did not collect the data necessary for a comprehensive review of these areas of interest.

7.1 Schooling and literacy

Figure 7.1 below presents the percentage distribution of individuals aged six and above that have ever attended school by district.

Muhanga district is ranked the seventh with 85% of individuals aged six and above having at some point attended school; the top-ranked district is Kicukiro with 94.4%. All other districts range from 78.4% to 86%. This percentage is slightly higher than the national level (83%).

Figure 7.1 Percentage of individuals aged six and above that have ever attended school, by district

Source: EICV3. Note: Based on all persons aged six and above. Horizontal line represents national average.

Figure 7.2 shows that Muhanga district is ranked among the top seven by literacy rate (71%) among the population aged 15 and above. Compared to other districts, Kicukiro ranks first with 89.5%; the worst-performing district is Gisagara with 56.5%.

At national level, the average level of literacy rate is 69.7%. It is 82.6% in urban areas and 67.3% in rural areas. The average level of literacy rate in the provinces ranges from 67.5% in Southern Province to 68.7% in Northern Province, excluding Kigali City where it is 86.7%.

¹⁰ Rwanda Vision 2020, p. 6.

Figure 7.2 Literacy rate (%) among population aged 15 and above, by district

Source: EICV3. Note: Based on all persons aged 15 and above. Horizontal line represents national average.

7.2 Primary and secondary education

In Rwanda, the education and training system is structured into four main levels. A pre-primary level, which lasts three years, precedes the primary level that lasts six years. Above primary school, two levels exist, the first being a technical or vocational education, which aims at preparing students to enter the labour market once they complete this level, and the second being a secondary education, aimed at those students that wish to pursue a college or university degree before entering the labour market. Each of these levels is a six-year long programme. A fourth level is available for those completing secondary education or, in some cases, such as technical courses like those in the area of engineering, the technical or vocational levels. This education level is referred to as higher learning and comprises colleges and universities, lasting a maximum of seven years. The Nine-Year Basic Education Policy aims at ensuring that all children are 'able to get education in nine years (six years of primary education and three years of general cycle of secondary education) without paying school fees'.¹¹

The map presented in Figure 7.3 below presents the net attendance rates (NARs) in primary school, by district. The NAR in primary school in Muhanga district is 90.7%, almost the same as the national level (91.7%) and the rural areas average (91.5%) but less than urban average (93.3%) and the figure for Kigali City (94.1%).

¹¹Nine-Year Basic Education Implementation – Fast Track Strategies, p3, MINEDUC, November 2008.

Figure 7.3 Map: NARs in primary school, by district

The map presented in Figure 7.4 below presents the NAR in secondary school by district. It shows that Muhanga district is ranked among districts within the interval of >20%-30% for NAR in secondary schools; Kicukiro, Gasabo and Nyarugenge of Kigali City are the leading districts on this measure.

The NAR in secondary school is 20.8% in Muhanga district. It is similar to the national average of about 21%, and below the urban area average (37.4%) but slightly higher than the rural area average (18.2%).

Figure 7.4 Map: NARs in secondary school, by district

The EICV3 survey asked users of all levels of the education system questions about their satisfaction with the education services received. Although on a self-perceived basis, these questions allow for a review of the progress observed in the level of satisfaction of users.

Figure 7.5 below presents these results by district. Across all Muhanga district, 85% of the users of education services in 2010–11 were satisfied with these services. However, this is slightly above the national level for users' satisfaction (82%).

Figure 7.5 Percentage of users satisfied with education services, by district

Source: EICV3. Note: Based on all persons currently attending education. Horizontal line represents national average.

7.3 ICT education

Figure 7.6 presents results of a broader approach, investigating computer literacy in the overall population aged six and above that have used a computer before and would feel confident about using one again, by district.

The survey results show that Muhanga is ranked in the nine top as far as computer literacy is concerned with 3.2% of the population aged six and above having used a computer before and feeling confident about using one again. This percentage is slightly below the national level (3.9%). Kicukiro district emerges as the best-performing district in ICT education with 20.3%, as shown below. Among the urban population, 14% are classified as computer literate, but this applies to only 2% of the rural population.

Figure 7.6 Computer literacy: Percentage of population aged six and above that have used a computer before and would feel confident about using one again, by district

Source: EICV3. Note: Horizontal line represents national average.

8. Vulnerable groups

Groups that are considered particularly vulnerable by the Government of Rwanda are children under five years old, elderly people aged 60 and over, and people with disabilities. The government delivers a core set of social protection programmes through the Ministry of Local Government (MINALOC), supported by a number of complementary initiatives delivered by other ministries.

The main programme run by MINALOC, and a flagship of the EDPRS 2008–2012, is the Vision 2020 *Umurenge* Programme (VUP) which contains three pillars: VUP public works, VUP direct support, and VUP financial services. The three pillars represent public works for the poor who are able to work, cash transfers for very poor households without labour capacity, and financial services such as the *Ubudehe* Credit Scheme.

In addition to the VUP, MINALOC runs two other social assistance schemes: the Genocide Survivors Support and Assistance Fund, and the Rwanda Demobilisation and Reintegration Commission. Outside these core programmes are the social protection initiatives run by other ministries such as the Girinka 'One Cow per Poor Family' programme of the Ministry of Agriculture, the free basic education programme, subsidised subscriptions for mutual health insurance, and in-kind social care services run by the Ministry of Gender and Family Promotion. Moreover, Rwanda has a limited system of contributory social protection mechanisms that enable people in formal employment to access medical care and an old-age pension.

8.1 People with disabilities

Figure 8.1 presents the percentage distribution of persons with a major disability, by district. It shows that Muhanga is ranked second last among all districts by number of people with a major disability; its percentage (1.8%) is far below the national average (4.5%).

Figure 8.1 Percentage of persons with major disability, by district

Source: EICV3. Note: Horizontal line represents national average.

8.2 Orphans

Figure 8.2 below presents the percentage distribution of orphans – including those *one parent or both parents* deceased – among the population aged 0–20, by district. It shows that Muhanga district has 1.6% of orphans with both parents deceased and 14% of orphans with one parent deceased. Both these indicators are below or equal to the national level averages, which are 2.7% and 14% respectively.

Figure 8.2 Percentage of orphans (one parent or both parents) among population aged 0–20, by district

Source: EICV3. Note: Based on all persons aged 0–20. Districts ordered by percentage of orphans (one or both parents). Horizontal line represents national average of orphans (one or both parents).

9. Some gender aspects

The resident population of Muhanga district is 297,000, of which males comprise 46% and females 54%, meaning that females outnumber males.

Figure 9.1 below presents the percentage of heads of household by gender in Muhanga district. It shows that in Muhanga district 27.7% of the households are headed by females and 5.3% are 'de facto female-headed households', i.e. those headed by females in the absence of a male head who is ordinarily present.

Figure 9.1 Sex of heads of household in Muhanga

Source: EICV3. Note: In addition to the households who reported the household head as female, other households were headed by females in the absence of a male head. We call these households 'de facto female-headed households'. These households were temporarily headed by females whose husbands had been away for long periods of time.

Figure 9.2 shows the percentage distribution of employment by gender in Muhanga district. It shows that the majority of females in Muhanga district are small-scale farmers (85%), while wage non-farmers account for 5%. Males are involved in small-scale farm work at 60%, in non-wage farm activities at 24%, and in wage farm at 4.2%.

Figure 9.2 Employment type by sex in Muhanga

Source: EICV3. Note: Based on all working people aged 16 and above.

10. Conclusions for Muhanga

The EICV3 results show that Muhanga district has made remarkable progress in a range of areas:

The majority of the population use an improved water source (84%), and the figure is far higher than the national level (74%). The district is close to achieving the EDPRS national target for the water and sanitation sector, which is to increase access to safe drinking water to 85% by 2012.

The majority of households (76%) have access to improved sanitation facilities. This percentage is slightly above the national average and is higher by 11 percentage points than the EDPRS national target for the sanitation sector, which is to increase access to improved sanitation to 65% by 2012.

Muhanga district is among the districts with a high percentage in terms of improving wall construction material: only 7% of households use mud-covered tree trunks as wall material, which is far better than the national level and the rural area average.

About half of households (46%) own a mobile phone, which is slightly above the national average.

More than a half (64%) of households owns a radio, which is slightly higher than the national average.

A large percentage of land (88%) has been reported as protected against soil erosion; the figure is above the national average.

The majority (77%) of households raise some type of livestock. This is higher than the national level and Muhanga is among the top eleven districts by proportion of livestock.

Muhanga district is ranked the seventh for individuals aged six and above that have ever attended school; the figure (85%) is slightly higher than the national level (83%).

Muhanga is ranked among the first seven districts for level of literacy (71%) among the population aged 15 and above. It is above the national and rural area averages.

The NAR in primary school is 91%, almost the same as the national level and rural area average.

The mean walking distance to primary school is 26.4 minutes; this is slightly shorter than the mean distance at the national level (27.2 minutes).

However, in other areas, Muhanga district still faces challenges:

As in other districts, Muhanga district's population is characterised by a high percentage of young people. This represents a good potential work force but also a challenge if not well used; this is especially true because EICV3 data show that more than a half (53.6%) of the population in Muhanga district is identified as poor, with 26.2% extremely poor and 27.4% poor (excluding extreme-poor).

The mean walking distance to a health centre is 72 minutes, which is higher than the national and the rural area averages.

Beaten earth is used as material for flooring by the majority of its households (80%).

Only 5.5% of households use electricity as their main source of lighting, which is below the national level.

Less than four out of ten households have at least one saving account and Muhanga district is ranked among the last sixteen districts country-wide, which are below the national level.

The majority (77%) of the working population aged 16 years and above worked 35 hours or fewer in all their jobs in the seven days prior to the survey data collection and are classified as underemployed. This proportion is above the national level (68%).

Muhanga district is among the seven districts in Rwanda that have a high percentage of households cultivating (83%) on under 0.9 ha of land.

The percentage of agricultural households incurring expenditure on chemical fertiliser is 30%.

The NAR in secondary school is 20.8% in Muhanga district. This is below the national average but slightly above the rural area average.

Only 3.2% of population aged six and above in Muhanga are computer literate. This is slightly below the national level (3.9%).

In terms of gender equity, females spend far more hours on domestic duties: 20 hours compared to 11 hours for males. Also, employment by sex shows that females are more occupied in small-scale farm work than males and less involved in other types of employment that provide high income like independent non-farm or wage non-farm work.

In Muhanga district, 27.7% of the households are headed by females and 5.3% are '*de facto female-headed households*' (i.e. those which, during the survey, were headed by females in the absence of a male head).
