NATIONAL INSTITUTE OF STATISTICS OF RWANDA

CONSUMER PRICE INDEX (CPI) October 2010

The National Institute of Statistics of Rwanda is very pleased to deliver to users the Consumer Price Index (February 2009=100). The All Urban CPI is regarded as the headline index, producing the official inflation rate. **The CPI is published every month by the 15th**

All Urban Index:

In October 2010 the All Urban general index is established at 104.3 this stands for a decrease of 0.47% over the previous month which was 104.8. In annual change it increased by 0.17% compared to 1.47% in the previous month. This gives a general inflation rate by an annual average of 3.3% during the month of October 2010.

The underlying inflation rate (excluding fresh food and energy) is increased by 0.01% if compared to the previous month and increased 0.50% on annual change. The annual average underlying inflation rate is + 2.0% in October 2010 down from the previous month (+2.2%).

All Rural Index:

In October 2010 the All Rural general index is established at 105.5 this stands for an increase of 0.56% over the previous month which was 104.9. In annual change it decreased by (-3.45%) compared to (-1.34%) in the previous month.

All Rwanda Index:

In October 2010 the All Rwanda general index is established at 105.1 this stands for an increase of 0.22% over the previous month which was 104.9. In annual change it decreased by (-2.28%) compared to (-0.42%) in the previous month.

In October 2010 the All Urban general index is established at 104.3 this stands for a decrease of 0.47% over the previous month which was 104.8. In annual change it increased by 0.17% compared to 1.47% in the previous month. This gives a general inflation rate by an annual average of 3.3% during the month of October 2010.

The underlying inflation rate (excluding fresh food and energy) is increased by 0.01% if compared to the previous month and increased 0.50% on annual change. The annual average underlying inflation rate is + 2.0% in October 2010 down from the previous month (+2.2%).

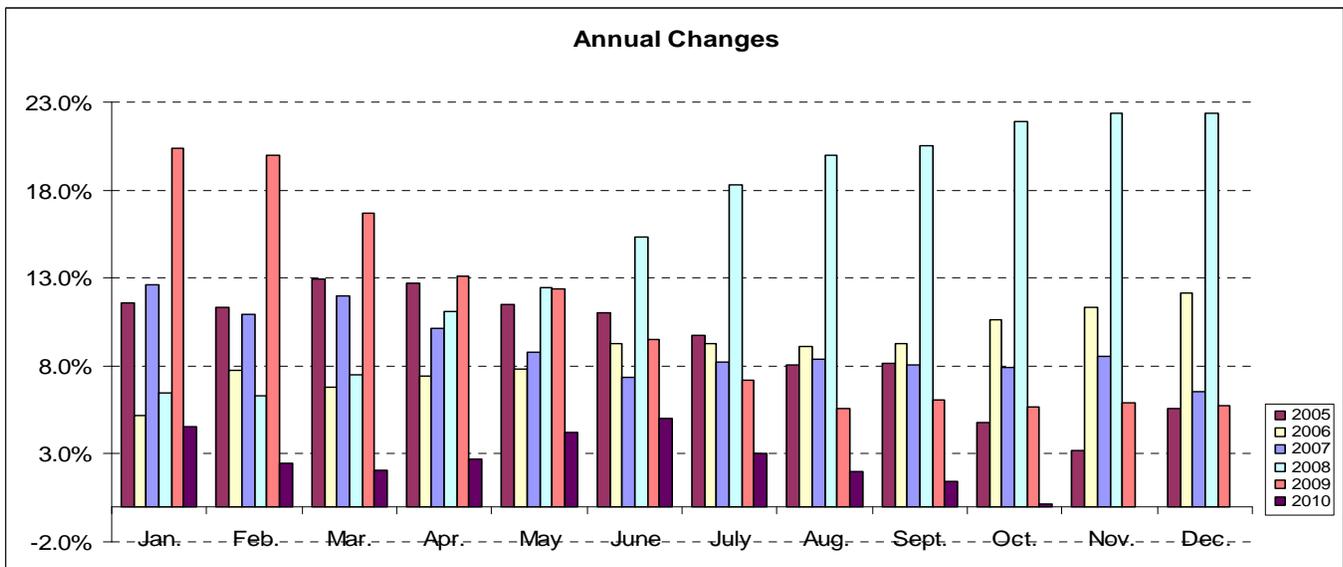

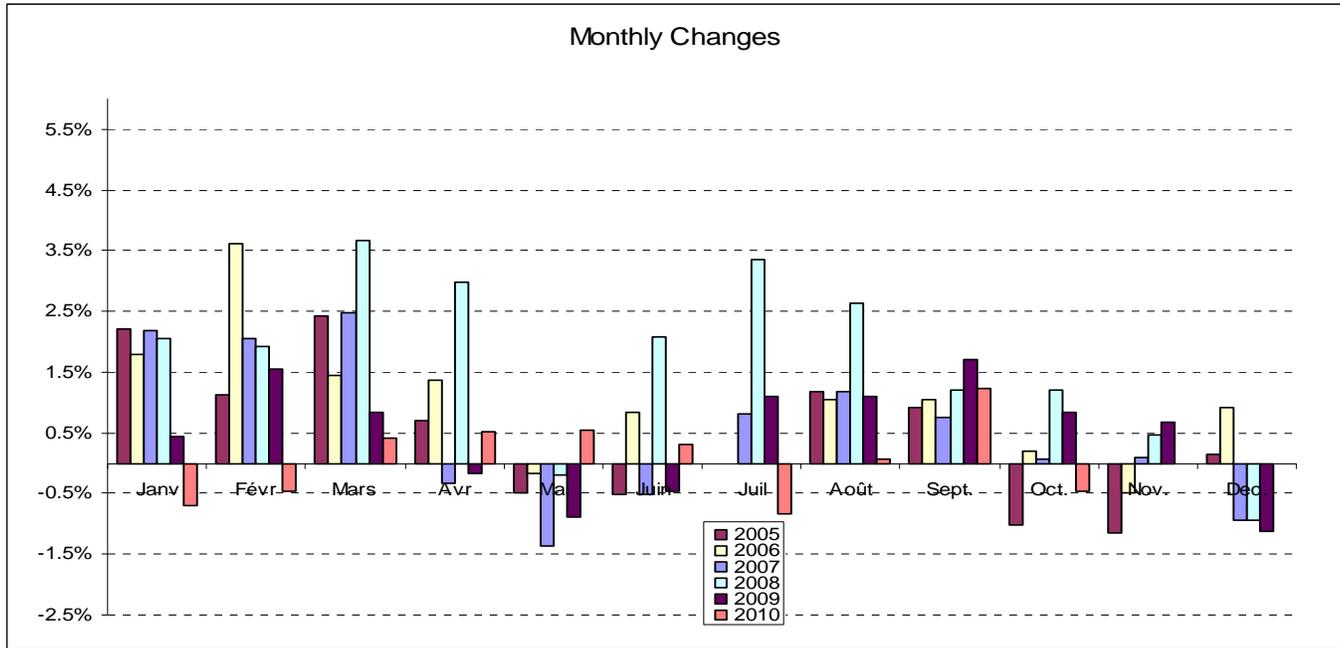

The decrease in the consumer prices index of 0.47% is attributable primarily to the decrease in Food and non-alcoholic beverages (1.61%).

It is noted that the decrease of 1.61% in prices of Food and non-alcoholic beverages is primary attributable to the decrease of 5.41% of Vegetables and 1.75 of Bread and cereals.

In annual change, the increase in the general index of 0.17% is mainly due to the rising prices of Housing, water, electricity, gas and other fuels (2.01%), Transport (2.74%) and the Education (6.51%) which contributed +0.43%, +0.35% and +0.21%. respectively.

The 'local goods' decreased by 0.11% on annual change with a monthly variation of -0.61%, while prices of the imported products increased by 1.33% on annual change with a monthly change of 0.12%.

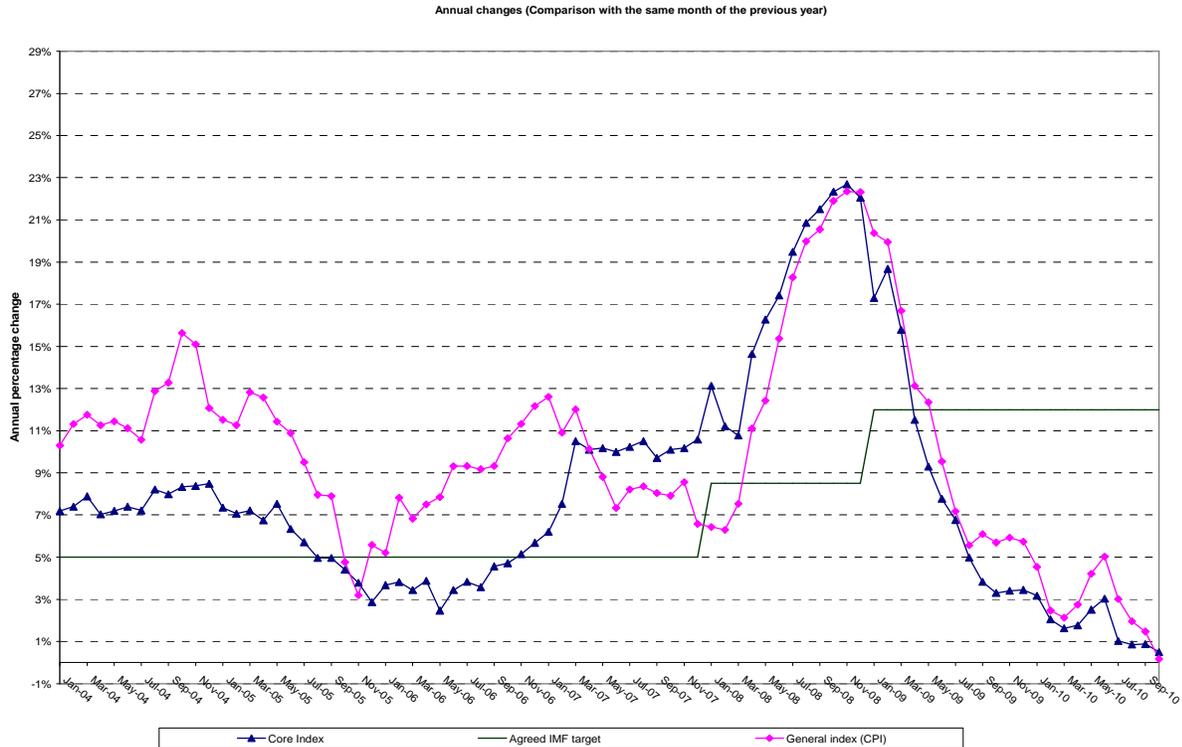

The prices of the fresh products had a negative annual change of 3.06% between October 2010 and October 2009.

Evolution (over 12 months) of the rate of inflation (%) ⁽¹⁾

MONTH	Oct. 09	Nov. 09	Dec. 09	Jan. 10	Feb. 10	March 10	April 10	May 10	June 10	July 10	Aug. 10	Sept. 10	Oct. 10

METHODOLOGICAL NOTICE

The Consumer Price Index (CPI) is a measure of the average change over time of goods and services purchased by households. The CPI uses a Modified Laspeyres formula to calculate the index. The reference population for the CPI consists of all households, urban and rural, living in Rwanda.

The household basket includes 1,136 products observed in many places spread all over the administrative centers of all provinces in Rwanda. All kinds of places of observation are selected: shops, markets, services etc. More than 29,200 prices are collected every month by enumerators of the National Institute of Statistics of Rwanda and of the National Bank of Rwanda.

The index reference, or base, for the CPI is February 2009.

The weights used for the index are the result of the Household Living Conditions Survey (EICV II) conducted in 2005-2006 with a sample of 6,900 households.

How to Interpret the CPI

Movements of the indexes from one month to another usually are expressed as percent changes rather than changes in index points. The level of the index (relative to its base period) affects index point changes, but it does not affect percent changes. The following example illustrates how to calculate percent changes:

Index point change

CPI	178
Less CPI for previous period	<u>176</u>
Equals index point change	2

Percent change

Index point difference	2
Divided by the previous index	176
Equals	0.011
Results multiplied by 100	0.011 x 100
Equals percent change	1.1
